>It was 1.02 I was looking for.. (arrg!)

Some people are quite whiny about requesting TOS images.
Anyway, if you have any tos.img file, I'd really appreciate if you
were kind enough to send me it.
Never mind which version, but the higher the better..
If I find any I'll mail it to you ok?

SLIP was easier to develop. It was the standard long before PPP. It
always makes sense to deliver something rather than nothing. And yes,
there is development on PPP, it just takes a while when you're doing
it in your spare time.

Source record: 125632

JH>Howard Carson at MGI recommended the NOVA board "if I could find
JH>one". Is there a better option?

No. The NOVA is the best option I know. The only disadvantage is that it doesn't work together with more than 4 megs of ST-RAM.

JH>I've got the Wizztronics ram board which takes 1 16 meg 72 pin SIMM if
JH>I have the terms right.

So there is hope. I would recommend to buy a 4 meg 72 pin SIMM (very cheap) and to downgrade your falcon until you can afford to buy an afterburner accellerator card. The afterburner can be equipped with the 16 meg SIMM of your Wizztronics ram board. -> 4 meg ST-RAM and 16 meg FAST-RAM

JH>How big is the Magnum card?

I'm sorry but I don't know anything about it.

>I'm a little confused..

"Nosys", from what I gather, is a kind of custom GUI interface that fits in with GEM.

NoDesk is a replacement desktop.

NoDesk uses Nosys, so in order to use Nodesk, you need Nosys. Just put nosystem.prg in your auto folder, as you have done, then run Nodesk.

Nosys alone is of little use to a user.

Why they didn't just use standard GEM, and save all the bother of non-standard Nosys, I don't know.

# 5207. Taylor UUCP won't dial; uux prob. - _please_ help!

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <HCQVADUQUp@tos.ak.planet.gen.nz>
Source record: 125635
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I am currently attempting to use Taylor UUCP under MiNT to get my email, since I am finding UPoint (which I currently use) rather limiting.

I've got an excellent mail reader, Mutt, working fine, as well as an rmail that will deliver the mail locally, but I am havign trouble with Taylor UUCP itself.

Previously, I had Taylor UUCP working perfectly, dialling my ISP and receiving the mail. At this point, however, I had no mail reader so I didn't take it further. Now that I have a mail reader, however, I've found that Taylor UUCP will no longer dial the remote machine.

At the shell prompt, I type

uucico -S planet

(planet being the name of my ISP's machine) but instead of dialling (like it used to do) nothing happens. Uuxqt is executed immediately after I enter "uucico -S planet" but uuxqt exits about half a second after it is executed and no dialling takes place.

The strange thing is, I do not recall changing anything in the configuration since I had it working.

I also found that trying to run uux with the `-' option, in order to make it pass the standard input on to the remote task (rmail in this case), caused uux to crash. Luckily I (hope I) can avoid this by using a command like the following:

uux 'planet!rmail < localfile'

where localfile is a temporary file created by my custom sendmail, containing the message text.

Here are the Taylor UUCP configuration files that appear relevant:

--- /etc/uucp/config ---

```
# The UUCP name of this system
nodename tos

# The UUCP spool directory
spool /var/spool/uucp

# The UUCP public directory
pubdir /var/spool/uucppublic
```

```
# The UUCP log, statistics and debugging files
logfile /var/spool/uucp/Log
statfile /var/spool/uucp/Stats
debugfile /var/spool/uucp/Debug

# The maximum number of uuxqts
max-uuxqts 1

--- ---

--- /etc/uucp/port ---

# Portfile for modem on device /dev/ttyb with speed 19200 baud.
#

port port1
type modem
device /dev/modem2
dialer hayes

```

--- ---

I've been trying to get this working for months now, and every possible problem seems to be occuring, so any help, no matter how obscure, would be greatly appreciated. In particular, I would be very pleased to speak with anyone who uses or has used Taylor UUCP.

I look forward to hearing from you.

>
>You can read this in the ASH-INFO from 10th of March 97, Page two left
>column nearly 8 cm from the bottom.

Hi Gerd, but I can't read it.

So at the second side, left column there is:

"Tabellen f&#65533;r ein HTML-Dokument gstaltet man am bequemsten mit Texel 1.6, das
ebenfalls speziell f&#65533;r CAB erweitert wurde."

So in english: "The easiest way for _tables_ in HTML-Documents ist to use
Texel 1.6, which is specially expanded for CAB."

They don't write about a whole HTML-Side. One paragraph above they talk
about HTML-editing with QED.

From: publish@zetnet.co.uk
Message-ID: <5gfj5t$6su@irk.zetnet.co.uk>
Source record: 125673

HI Roy

>Are there any programs that will convert .WMF to .JPG or .GIF?

WMF's are Windows Meta Files, ie vector files. No easy way of changing them into colour bitmaps on the Atari methinks :-(

Using X-Change you can convert to CVG format, but you lose the colour IIRC. I'm sure there is a PC (!!!) program that could convert vector to bitmap, but that probably means finding someone with the software and hardware.

>I don't mind if it is in stages, as long as I get there :-)

Could be a long-winded exercise I'm afraid :-(

Best wishes
Mike Kerslake

I had the same problem with 1.21. Version 1.20h is the last one that I
could make work on my Falcon. It works fine with CAB 1.5 under TOS,
Geneva and Gluestik. Version 1.21 won't work with any one of those
configurations - just error #600.

Out of the ether, the following was mentioned by Harry...:

HS> Ghostscript from Compo (a snip at 200+ukp!). A printer that
HS> contained a Postscript processor internally would typically cost a
HS> premium of approx 500ukp at one time - I think the HPIII Si was an
HS> example of one (but I could have got that one mixed up with
HS> another...).
Well a LaserWriter NT used to go for 299 UKP, which was a postscript
compatible 300dpi printer which could be connected to the Atari as we

I think (not sure though) that the HP Postscript printers are designated with
an M in the name so the HP 4SIMX's we use at work are networkable with
postscript (don't know what the X designates) and the 4MV's are again
Postscript and support A3 printing (V).

Personally my LaserJet 3 with PacificPage cartridge handles PS well enough
for my uses, just a shame that Calamus S doesn't support it and I then have
to reboot the printer, disabling the cartridge.

Hi Mike and Cliff,

If your running CAB v1.5_030 make sure your using all the files from v1.5
and didn't just change the cab.app. If you changed your Stik default files
you might try these:

TTL = 64
PING_TTL = 255
MTU = 576 (Routers use 576 octets)
RCV_WND = 2048

For me, cab.ovl 1.18 is still the most stable and will connect to most sites,
though not always complete. I don't get #600 errors anymore.

Here is the original article (wow - a search I did came up with what I
wanted at the *top of the list*!)

---cut-here----
PATENT law has been used for the first time in the arcane world of
mathematics. A patent has been issued to protect the use of two numbers,
triggering a row over how far intellectual property rights can extend.

The U.S. Patent and Trademark Office has registered the patent for the 150-
and 320-digit prime numbers to Roger Schlafly, a California computer
consultant, who can now sue anybody who uses them. But litigation is
unlikely as commercial motives are not the reason for Mr Schlafly's patent.

He is a member of the League for Programming Freedom which opposes software
patents and has lodged the patent to highlight the absurdities of the
registration system.

The numbers have a property which enables a short cut to be taken when
decrypting codes. Because the keys in the cryptography system are hundreds
of digits long, a short cut can mean huge time savings.

Mr Schlafly's Partial Modular Reduction Method patent does not stop at the
mathematical method or just one number. It lays claim to any prime number
that allows the short cut.

The prime numbers satisfy the principle requirements for patentability
because they have a use and because they are so large that nobody has used
them before.

Sir Roger Penrose, Rouse Ball Professor of Mathematics at Oxford University,
said: "It's absurd. Mathematics is out there for everybody.

"I would be interested to see what happens if it goes to court. However, if
he is trying to show up the system I would give him all my support."

From: hallvart@sn.no
Message-ID: <332bf0ce127fc46@sn.no>
Source record: 125683

Does anyone know where I can find a sample editor called "audio create"?
It was mentioned in "Atari computing" no.1 page 39.
I'd also like to try out "Incontrol" which was shown on the same page.

I haven't been able to find them using my search engines, probably because
the archived filenames are different than the ones I've used for searching.

This is all geting to theoretical for me, do the really big numbers
exist even though nobody has ever though of them, do any numbers
actually "exist"?

> > Ah of course the copyright law that protects intellectual proerty is
> > stupid because you can't steal their work, I get you.
>
> Why do you people always assume that someone's trying to STEAL
> something?
>
> A bit cynical and negative isn't it?

Not really, Copyright law is there to protect the rights of ownership ie
to prevent theft of your works, therefore if you say it is "stupid" then
the obviouls implication is that you believe that it should be OK to
steal their work.

> And anyhow, who'd give a damn if TOS did get stolen? It wanted
> binning anyway...

I would for one. You seem to think that it's shit but also agree that
people actually want it so surely it's good enough to buy? It was a
very good OS at the time and it still fares well now, it of course did
need a fiar bit of development and that exists pretty much in the form
of Magic.

## 5221. Tos-Q?

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: lebech@post3.tele.dk
Message-ID: <5ggsi4$18tg$1@news.inet.tele.dk>
Source record: 125685

Hello.... I just cut this from a TOS.img (spanish :)

(This is 1.4)
---
Copyright =BD 1985,86,87,88,89
Atari Corporation
Digital Research, Inc.
Reservados todos los derechos

Hmmm from 1985-1989 - does this mean that this rom copyright expired
in 1990?? and that it can be spread?? =
please educate me :)

bye..

## 5222. 1.02, please.!

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: lebech@post3.tele.dk
Message-ID: <5ggtvv$1bgc$1@news.inet.tele.dk>
Source record: 125686

Hello,,, I really made a stupid error. I requested TOS 1.04 but
It was 1.02 I was looking for.. (arrg!)

It is : TOS 1.02 (I think it has to be a german rom-file) so if
you have it please let me know! This rom-file it so old so
please do not make a fuzz about it.

Yours Kim.

# 5223. FS Lynx/ST/Falcon/Gameboy stuff (and books)

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.031697.144740.04@wxs5-10.worldaccess.nl>
Source record: 125687

This is the March 16th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

---

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean) (SOLD)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
Centipede (the Sinister Developments version) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
(SOLD)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all) (SOLD)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
(SOLD)

Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to
get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?) (SOLD)
+Oh No! More Lemmings (totally addictive) (SOLD)
+Lemmings 2 (more addiction) (SOLD)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game) (SOLD)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!) (SOLD)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

---

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

---

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2 (SOLD)
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are

"STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

---

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM (SOLD)

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet (SOLD)
Ninja Gaiden
Rampage
Robosquash (SOLD)
Todd's Adventures in Slimeworld (SOLD)

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 ( INT(x/5)=x/5 ). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing ) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

# 5224. NVDI driver for stylus

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: jklimch@curly.cc.emory.edu
Message-ID: <5ggutj$riu@curly.cc.emory.edu>
Source record: 125688

Hi, I just got lucky & stumbled into a demo model of Epson's Stylus Pro (720 dpi color inkjet) printer. It works great with the pagestream stylus driver I downloaded from UMich. However, I can't find a driver for NVDI (version 3.02). Or, in a pinch, I could use a speedo driver (version 4 &5) as this is mainly for atari works docs. Anyone know where I should look for one?

Thanks, that's pretty interesting. It's slightly different though as the
numbeers are high ewh not to be common usage and also they have some
sort of property that makes them able to perform a function that he
discovered. I think the law still stands that I can't call something
"The 5" and stop other people from using "5" though.

# 5230. Wild & Wacky Auction (GOING ONCE!!!)

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970316155200.KAA15115@ladder01.news.aol.com>
Source record: 125694

AUCTION NOW IN GOING ONCE, GOING TWICE, GONE STAGE
Place your bids before you miss out on these spectacular rarities!!!!

---

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

From: dwmoar@aol.com
Message-ID: <19970316172300.MAA20005@ladder01.news.aol.com>
Source record: 125698

Find and use the program Graphics WorkShop on the IBM. It can convert the WMF format to either TIFF - GIF - JPEG - or IMG. There are a slew of other formats it will also convert to. But GWS is fast and easy to use. Hope this helps you out

dwmoar@aol.com

# 5235. need hi-res adaptor

Newsgroup: comp.sys.atari.st

Hello, I wonder if you could help me.
I've got my hands on a second hand Atari ST, and need to get a
hi-resolution converter for it, does anyone know of a place (in England,
preferably), that I can order one from, and how much it costs?
Pls. email me at the address below if you can help
Cheers!

>Do you have a speeder installed in your Falcon? Quite ugly.

It worked brilliantly until a couple of weeks ago when it fell off
it's stand and short-circuited against the 3.5"-rack in my tower...
The Falcon was more stable *after* I installed the speeder and various
patches than before, so I wouldn't blame the speeder. And I miss the
higer resolutions...

>JES>Hehe... Where did they connect drive B when they tested it? ;-)
>
>It is possible to connect drive B:.

Really? According to a friend of mine (I won't mention his name as he
might be wrong ;-) the select-line is used for something else. Hmmm,
wonder if it would be possible to hook up one of those qic-streamers
that uses the Shugart-bus?

^^^^^^^^
Be careful with that one! It worked fine for me a long time, but after
a while the unavoidable happened: MagiC crashed before wbdaemon
flushed it cache. Boom! Luckily I had a recent backup, so I only lost
a couple of days work.

>redraws, open dialogs and so on: MagiC is faster. GEMBench is a funny
>programme, it doesn't show me the same percentage if I use it twice with the
>same configuration.

Correct. But that doesn't happen under TOS, just under multitasking
AES'es like MagiC, Geneva, N.AES and MTOS. Try running it in
single-mode and the figures will be much more consistent.

>MK>On a regular Falcon the difference between MagiC and TOS is so small
>MK>that you doesn't realy notice it.
>
>What? I hate it to use TOS on my Falcon because everything is so slow.

I always use TOS when max. speed and stability is required. Yes, the
VDI in particular is slow, but I've always found GEMDOS to be very
fast and reliable. But if you use 4.01 that's another matter. Besides
1.00 and 2.05 that has to be *the* most bugged TOS ever released.

Don't worry about the whining. I had a Seagate that did this (And it
was *loud*! You could hear it all over the flat, even when all the
doors were closed and my HiFi was on!) for months before I moved it
into a PC and sold it ;-)

There's a relatively simple patch for the parity-problem. It involves
one single, standard chip, and it's available on my homepage. (Atleast
it will be as of tomorrow, Monday 17.)

Oh no, not another one! Get this ******* html out of usenet! Oops, I
forgot, this can't be done with the "powerful" Netscape 4.0...

And for the record, I just *sold* by PC because of all the hassle and
trouble (Had to reinstall Windows every now and then.) I had. It
crashed and trashed (With 16Mb.) all the time and I spent more time
maintaining it than using it. The only thing it was good for was
emulating old 8-bit computers.

# 5241. TAF meeting march 19th - Computer Direct!

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <332c3461.0@lagoon.idirect.com>
Source record: 125705

**********

COMPUTER DIRECT WILL BE IN TORONTO ON WEDNESDAY MARCH 19th,

AT THE REGULAR MEETING OF THE TORONTO ATARI FEDERATION!

Doors open at 6:30 PM - Admission is free to TAF members

Non-member admission is $2 at the door

======= Lots of software for sale =======
======= Lots of hardware for sale =======

Chris Krowchuk will be demonstrating the ultra-powerful
DirecT60 Hades computer!

The meeting site is located at Memorial Hall in the North York
City Center, 5110 Yonge St. at Parkhome Ave. Go to the lower level
(Concourse). Go to the far end of the complex, to the Library
Building. Memorial Hall is located beneath the Library. There are
signs pointing the way.

Visitors from out of town can take Highway 401 to the Yonge St.
exit. Travel north on Yonge St. for 5 stoplights and you're there!

Wednesday March 19th will be a great opportunity to upgrade some of
your favorite software: NVDI, MagiC, HDDriver, and dozens of other
titles. Tell Chris you're coming to the meeting and he'll bring
what you need . . .

=== for more info, contact: chris@compdirect.com ===
or lrhc@interlog.com

If you're using a stock ST, Chris, you should get HSmodem 7 - it works
better than turboCTS and can be configured for higher speeds if you
upgrade your hardware later. Should be available from my ftp site see
below.

BTW, for those who have had problems connecting to the ftp site with the
various STiK ftp programs, I will be making an http archive link page
"Real Soon Now<tm>."

Except for the ftp part - but MG-ftp doesn't work, either, so I suspect
that's a problem within GlueSTiK.

## 5250. StarGlider

# 5251. ST Software for sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-16 00:00:00 UTC
From: Mike Casey <bugfamly@wasatch.com>
Message-ID: <01bc3242$826dde40$5b8163cc@casey>
Source record: 125715

```
The following Atari ST software is for sale:

AD&D-Heroes of the Lance (Complete, shrinkwrapped) $5
AD&D-Hillsfar (Complete, shrinkwrapped) $5
Arcade Fever: Onslaught (disk only) $2
Arcade Fever: Stormlord (disk only) $2
Armour-Geddon (Complete in box) $4
Artura (Complete, Shrinkwrapped) $5
Chronoquest (4 disks, disk only) $3
Deja vu (2 disks, disk only) $3
Hunt For Red October (shrinkwrapped, includes paperback novel) $5
P-Dos (disk only) $1
Questron II (Complete, Shrinkwrapped) $5
Shadowgate (complete, shrinkwrapped) $5
Speller Bee (complete in box) $3
Strike Fleet (complete in box) $3
Teachers Pet (2 disks, instruction book) $3
Ultima 3 (Complete, Shrinkwrapped) $5
Uninvited (2 disks, disk only) $2
```

Will sell all for $30, shipping included
Please add shipping unless buying entire lot,
If interested, please E-Mail: bugfamly@wasatch.com ☺Thanks

Not quite. As far as I can tell, GEMRAM only loads GEM into ram, not the
entire TOS. It will only load a GEM.SYS file, not a TOS.IMG...

> That's what I would like to test. I've never had any compatibility problems on
> 1.62. Now if 1.62 is incompatible with STFM hardwae that's another story...

Correct. Everyone seems to have forgotten that TOS versions 1.6 through
2.05 were *STe only*. The init code will initialize the STe's extended
hardware without checking if its actually running on an STe, which causes
it to crash and burn on an ST... TOS 2.06 checks if its on an ST or STe
and intitalizes accordingly...

> Hi
> What do I need to shuffle email and news (offline) on a 1040 ST?

Unless you can get a shell account then for a start a Hard Drive is hughly recommended, you could then use Oasis which is pretty good (I prefer v1.35 to the later versions) but it works best with 2meg. Stik & Newsie may also work in 1 meg but I am not sure.

> What do I need to surf the web on a 1040 ST?

Stik & CAB will work but you will need an account that supports SLIP.

> what modems can I use/not use with the 1040 ST?

I don't know of any offhand that won't work, any PC modem should be fine as long as it's not one of the newer Windows specific ones, these ones tend to be clearly labelled though so that shouldn't be a problem. As you have an ST it's probably not worth paying extra for anyhting faster than a 14.4 as the serial port can't handle the extra speed.

No, they wont do that. Saying 'xx weeks till ...' is very risky because
it is very difficult to know exactly what is going to happen as bugs tend
to take longer than expected to iron out etc...

I should know, I made the mistake a couple of weeks ago of putting that
KP SACK would be released that friday, and it still has a bug! :-)
Fortunately I finally tracked down a very wierd bug, and there is only
one (minor) outsanding bug (that I am aware of). It is now on my WWW pages
even with this bug [fixed version tommorrow - 18/3].

Progress reports (ie. 'last week xxx was partially implemented') are
quite useful though...

MGftp doesn't work with STiK either, it locks the computer as soon as
I try to open a connection. This happens under TOS 4.04, MagiC!4 and
Geneva 005 (Demo). I haven't tried the combination MiNT/STiK.

Try the latest GlueSTiK (0.02b4) and see if that cures the problem.

I own a 1 MB Atari STE without a second floppy disk or a hard drive.
I am looking for a good word processing package that can print different
sizes of the one font without the expense of buying a second floppy
drive or a hard disk to install GDOS. I already have PROTEXT 4.3 which
has its own printer drivers, it has one font but you can only get the
one size. Is it possible to get a package which can print fonts of
different sizes without GDOS? I need an inexpensive package. Any help
is appreciated.

# 5274. Fix: M-STE/TT/Falcon modem ports

Newsgroup: comp.sys.atari.st
Date: 1997-03-17 00:00:00 UTC
From: q-funk@megacom.net
Message-ID: <5gi2dn$48t$1@cti01.citenet.net>
Source record: 125582

Those who have been having problems accessing the higher baud
rates offered by the M-STE/TT/Falcon's SCC chips using HS-modem
and Atari's modem.cpx need not worry anymore:

Using Fast Serial (a German PD) you just need to have fast_ser.prg
from the fser096b.lzh archive found under the tos_patches sections
of FTP sites. Then e-mail myself or Katherine Ellis requesting the
English version of the CPX. kellis@primenet.com

Copy fast_ser.prg just before stiktsr.prg in your auto folder and
the cpx into your cpx directory.

That's it! You're now set!

Fast Serial will poll your system to find out the exact make and
model of your SCC and adapt its routines accordingly. The patch
also recognizes if an ESCC has been retrofited. The matching CPX
correctly accesses available baudrates above 19.200 and allows you
to save your settings and reload them automatically afterwards.

Not really, a copyright notice is a copyright notice. No arguing with that until the copyright expires, which it won't do for a good few decades.

The obvious thing to do is ask Atari for permission to distribute it. My mail to postmaster@atari.com bounced, oddly enough... and I haven't been bothered to investigate other avenues of contact.

Have a look at ftp://ftp.uni-giessen.de/atari/hardware
There is a file called et4000.tos which describes the way to adapt an
ISA ET4000 PC card onto a MegaST. This is a do it yourself project.
The archive mega4000.zip contains the electrical drawing of the project.

I can try. As it's a .TOS file you might be correct after all. :-)

> >BTW. Why does they always release the demo versions as selfextracting
> >archives? I _HATE_ it as I can't ceck it before I get home. I dislike

>: which version of NEWsie are you using? I was having a similar
>:problem with version 0.66 - John Rojewski told me to try the latest
>:version, and the problem disappeared!
>:
I was using version 1.66 but having been told to get a new one
I have found 0.69 on dmeons ftp and that problem has cleared up!

>: Try getting the new version - it's at
>:http://www.primenet.com/~rojewski/newsie72.zip - and see what happens.

I tried to get that but I had YET another problem :((
My Cab.ovl is a VERY old one and when I put on 1.21 Cab
doesn't download the pages! My OLD cab.ovl always
makes cab bomb :( I think the old version is 1.1
Is it my Cab setup or the StiK which is causing these problems!

Hi Atarians

just an addition to Uwe Seimets reply,
HuSHi doesn't cause any problems with BIG partitions, no matter
wether they are the first or the secondary partition.
I ran my Harddisk, usually connected to an STE with TOS 2.6 once
with my old 1040 STf, TOS 1.2, and my Harddisk, a 170MB Quantum
didn't bother with neither of the 2 85 Megs Partitions.

** If you check back, I never said it *was* "stupid".

You seem fond of saying it though...

I merely*implied* that that it could be "more sensible".

This is due to the original copyright laws being based around
printed material and other pre "computer-age" stuff.

The copyright laws probably allowed more magnetic stuff to
be "legally" stolen, due to it's antiquated nature.

But really I think you've missed my original point, which was not
"how to steal things" -as you seem to think...

So, please stop mis-quoting me, to fit your sanctimonious argument!

Argue with what people *said* and not what you *think* they said, or
would like them to have said.

> > And anyhow, who'd give a damn if TOS did get stolen? It wanted
> > binning anyway...

>
> I would for one.

*Well Paul. It's a noble cause you fight.
* But there are more important things to worry about.
* The rapidly approaching extinction of the whales
*and elephants, to name just a couple.

> You seem to think that it's shit but also agree that
> people actually want it so surely it's good enough to buy?

*I suppose I'd have to agree that people want it, but then
*people also want Kylie Minogue records too....
*Wether they're good enough to buy is a different thing, down
*to personal opinion I suppose.

We don't have stupid questions here :-)

>modulator is there any way I could build one? I live in the U.K. so it
>would need to work with the PAL system. If there is no way of doing this
>is there any way I could connect it to a PC monitor?

Open your 1040, have a look to the backside of the mainboard.
If you found an empty space like:

```
------ connectors---- -connectors---
| |
| * |
```

Keybord

"*" That's the point for an internernal Modulator ( PAL or NTSC )

If you HAVE that empty space: Ask Brad Koda / BEST-Electronics C.A
for an simple internal PAL-Modulator. Make sure he have PAL!
(I think he have NTSC..)

Have a look to some solderpoints in that free space..
Like: 1 2 3 4 ( or also )

If you take a module, wire the same points to the 1040 board.

I hope that's all. I will ask my schematics if you found problems.
Ask a friend with a "licenz to solder" :-) if you can't do that by yourself!

Regards, Robert

Nobody is arguing what the Copyright notice but what restrictions does
it have exactly? Plenty of Freeware software is freely distributed and
still the copyright is held by the owner, what exactly are the
conditions accociated with a copyright?

Source record: 125598

You can use your Atari computer to control Light shows or any MIDI device.
Notator ow from Emagic will control any MIDI device, including MIDI mixers and light consoles.
I used it to control a MIDI mixer and it worked great.
Notator has a MIDI learn function that works very well, you set the program into learn mode and turn the consoles SW or fader to transmit a message. This message will now be transmited by the fader it was assigned to. The fader's motion will be recorded by the programs sequencer and you can do any needed editing.

Not quite true. TT uses a normal VGA output (640x480 in 16 colors),
but also offers the sort of non standard resolutions (TT High, TTlow
and the ST versions!!)

> 1. Is there a software fix for the video mode? Is it
> software compatible?
No.

> 3. I know that one can use a graphics card such as CRAZY
> DOTS and the NOVA card(s). Can I still use my previous
> video modes? Will my software be compatible? What about
> MagiC and NVDI? If I choose not to get NVDI ET4000, can I
> still use NVDI to load my fonts?

Nova graphics cards are the most compatible cards for ATARIs. They are
also very fast. Nova cards work beatifully in conjunction with Magic
NVDI (for Fonts only, you don't need a software accelerator for the 64/
32bit version of the Nova ).
Nova cards are basically compatible with any well behaving GEM
applications.
Just about any recent productivity and utility software (except games)
work great on the Nova.

For more info on the Nova cards, please contact Homa Systems House
(613)722-0901 or on the web page

Trolling for props, eh? Well, I'll bite. Great Mag! You Brits really know how to pull off a classy publication. Here are my comments in random order:

1) Keep it black on white. If I want to look at color pictures I'll buy a Hustler. (or other Mag heavy on the pink:)

2) More Q and A. You could fill it half with these and I'd be happy. But don't.

3) Tell the status of previewed software. Example: is Freedom 2 available now? This month? This year?

4) Where is all this great shareware reviewed hiding? Many (most?) Atarians don't have a local PD shop.

5) Add programming tutorials like in ST Review. R.I.P.

That's a start.

Sam

>Normally, I would tend to agree, but it seems this past week has seen a
>rash of young puppies with no money and highly acquisitive habits...

Now hold on, guys! In defense of the poor guy who originally posted, all he was asking was if anyone knew if either of the Starglider games were available for download anywhere -- a reasonable request since they are very old games and perhaps they were released into PD as some older software sometimes is, or in demo form. He wasn't asking for a free handout necessarily! It can be very hard to find older software, or any Atari software for that matter! It is extremely rude interject the idea of piracy into an innocent question and blast the guy for it! And then to just stereotype students (I am a college student) as young, moneyless, pirating cheapskate rejects out to steal as much stuff as they can on the net is totally appalling!!! Yes, students tend to have less money (go complain to the people who set the high costs of a college education about that), and of course we're going to cut corners wherever we can to save money and ask if there's a possibility of something being free that we want or need. That doesn't give anyone the right to slander us! I'm sure, unless you never went to college (in which case you have no right to make these interjections), that you've been here and know what we're going through. So please stop making these rude and uncalled for remarks about this poor guy! Besides, even if someone requests something that's illegal not knowing it's piracy, it's much more appropriate and productive to let them know about it in a friendly, matter-of-fact way than to get on your high horse and spew your knowledge of legality at them! Now I'll get off my high horse and let you respond! :)

Is there no ZIP utility for UNIX? The *.TOS file is nothing more than a
ZIP file which has been converted with the ST Zip tools to a
self-extracting archive. It can be renamed to a ZIP file and opened
with any ZIP utility.

Yup, I remember this vaguely. It'd run even without a monitor, because all
the electronics at shows would often interfere with monitors.

If it was Hand On, then all O have is a phone number for them:

Hands On MIDI Tel: +44 (0)1705 783100

# 5300. TT modem 2 bugs

Newsgroup: comp.sys.atari.st
Date: 1997-03-17 00:00:00 UTC
From: please@no.spam.mail.here.mettav
Message-ID: <31751_please@no.spam.mail.here.mettav>

q> modem 2 offers from its CPX so this doesn't help much. Was there ever a
q> newer version of the cpx or a bug fix for this, so the settings are
q> remembered and so I may finally access the higher baudrates in a
q> positive way?

I'm in exactly the same position as you, having now got a TT, and I got a
little worried when I read your message. But I needn't have...

I don't use the Modem.cpx because it's well known to be absolutely useless.
Instead I use HSModem7 for a start.

More importantly, the baud rate is set in DIAL.SCR

BAUD_RATE = 38400

The modem port is set in DEFAULT.CFG

SERIALPORT = Modem 2
CDVALID = TRUE

I logged onto my ISP and everything went just fine.

m> handler now. Would it work with these devices? For that matter, what
m> is the best hard drive handler? I have heard of HDDriver. Who makes it
m> and how new is it?

I've seen that you've had lots of answers already but I'll just mention one
or two things that haven't been covered.

Of the freeware software that's been mentioned (Turtle), there's also Vault
and Key (backup and restore respectively) which was pretty good -possibly
better than Turtle. You may want to look at Unturtle as well.

GEMAR, which is shareware, gets a lot of votes from those who use tape
streamers. Very high quality program from what I've seen, but a bit like
ConNect - you either like it or not, however good it may be.

Zips and Syquests don't need anything more than an up-to-date hard disk
driver (ICD or HDDriver), but Tape backup needs Diamond Back software or
Gemar to control the streamer properly - Vault, Turtle or even Kobold isn't
designed for that.

>> Are there any programs that will convert .WMF to .JPG or .GIF?
>> I don't mind if it is in stages, as long as I get there :-)
r>
r> WMF is "Windows MetaFile," a vector format.. I don't know of any
r> programs on the atari that can read them. Your only way to do this
XChange from the FaST Club (in the UK) will convert the WMF's into Calamus
Vector format (CVG) or into the OL files used by Ouline Art, but the result
will be in monochrome.

Once in CVG, there are other progs that will produce an IMG bitmap, and from
there something like Imagecopy will produce a JPG or GIF.

But still only in B&W I'm afraid.

Speak to 'ya later!

Source record: 125615

AJ>How does using the old GEMDOS make it non-premptive?

That's not what I meant. I'd like to say that MagiC is much faster and totally reentrant. It is a hard contest for hardware that's not 100% fine. Damned, why don't you understand German :-)))

AJ>MiNT will not preempt supervisor mode processes.

Like MagiC. But you can do AES-calls within an interrupt and things like that with MagiC which is impossible to do with TOS.

Regards
Goetz

c>
c> Say... I think dumping your TOS into a file - straight from ROM - does
c> not produce a file such as TOS.IMG. Am I right in assuming that TOS.IMG
c> is a special kind of executable file, not just a straight TOS dump?

I don't think it is an executable. It needs some form of TOS loader tobe
able to use it AIUI.

I'm interested to hear whether there's any generic TOS loader, because I've
now got hold of a TOS 3.06 that I'd like to try with my TOS 3.01 here -no
loader though...

Btw - I seem to have a problem with UVK v6.9 crashing on the system status
screen on this TT - any ideas why? Will the trick of holding both shift keys
still work with this version?

This si a good idea, even though my own personal circumstances have changed -
I now have a TT!

My Mega STe is likely to go on sale as soon as I've confirmed I've got
everything transferred over properly and I clear up what sort of package I
have available for sale.

Nevertheless the situation will remain just as true for the new owner and
I'll ensure that the information I have is transferred over.

L>Seriously? Why? I have a PowerUp2 installed as well as an FX card,
L>and both work fine

I think it isn't a good idea to use the Falcon out of its specification. And that is exactly the only thing a speeder does. If you use an Afterburner with no bus clock modification it is a fine thing. But never tune your car without checking your brakes. The Falcon is designed to work with an 68000/16MHz, the 68030 was added to the design later.

Regards
Goetz

## 5315. PPP available soon?

Newsgroup: comp.sys.atari.st
Date: 1997-03-17 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <332c8d2233af6b4@sn.no>
Source record: 125637

How far down the road is a usable PPP setup "for the rest of us"?
I know that MiNT can be used, but so far I haven't had any good experiences with it regarding the rest of my setup on my STe, though I'll be trying to install the "KEMD/KGMD" setup.

I haven't been able to get CAB working online even though I've used version 1.5 together with STik 1.12 and cab.ovl 1.21 -I belive they're all the latest versions.

As I don't have a SLIP account, but rather a choice between PPP and terminal emulation I've tried it with TIA (The Internet Adapter) which is a SLIP emulator which can be used via terminal logins.
All I get is a "resolving host" message which keeps going on forever. I can't even exit the program or anything (the funny thing is that the computer hasn't frozen, because I can access the menues in CAB, though they're all greyed out). But the only way to exit is to reset the machine.

I've also tried STik together with "Finger" and MgFTP, so apparently the problem is with the connection and/or STik.

Anyway... I'm wondering if someone out there has any facts about PPP for the ST- I've heard enough rumours (for a long time), but nothing more than that. I for one don't know any provider which supplies SLIP- at least not without having to pay extra. Just about everybody uses PPP these days, and some providers (luckily for me) still has options for terminal emulation (VT-100 etc).
So why has STik been developed for SLIP systems then? Does everybody but me have access to SLIP?

>they have been trying for so long I'm beginning to think they will give up.
>If you try v1.35 and have a problem with NOS email me and I'll try and help.

I've downloaded Oasis 1.35 now, but haven't really had the time to try it
out properly, but so far it seems a lot better than version 2 (which
*looks" better visually, but so what when it won't work!).
For the time being I'm just looking into what's available out there, but
I'm not going to put too much effort into it all. It all seems pretty
complicated and not entirely free of bugs and problems, all these Internet
packages...

For the time being I'm happy with a terminal setup which I log into my
provider's UNIX machine with (using "Connect") where I download/upload
SOUP offline packets used together with "Okami" to read/write messages
offline.

>I have on several occasion tried to access your web page but Cab always
>seems to give me a 'Title Missing' error Any ideas

Strange.... I have titles in all my pages, and they should conform to HTML
2 and 3.2 standards as I've tested them.
I don't use CAB myself (haven't been able to make a connection and franky
I've given up- I'm going to wait until a PPP setup comes along for STik).
Do you have access to another computer with another browser? How about
using "Lynx" (though you only get text)? I use it every day through my
provider's UNIX system. Works great.

## 5318. TT video enhancement, video cards

Newsgroup: comp.sys.atari.st
Date: 1997-03-17 00:00:00 UTC
From: dogmeat@fog.net
Message-ID: <5gi4ta$d4j$2@news.wco.com>
Source record: 125640
Cross-posted to: comp.sys.atari.st,comp.sys.atari.tech

All:

With all the great and useful add-on boards, accelerators and video-fixes available for the Falcon 030, what options are their available for the TT? I am especially interested in video enhancements.

OK - I know that the TT uses a non-standard VGA output. What are the fixes and what are the drawbacks?

1. Is there a software fix for the video mode? Is it software compatible?

2. Is there a hardware fix that doesn't change the video modes, but allows greater resolutions and the video output (i.e. the cursed 4/5ths screen)?

3. I know that one can use a graphics card such as CRAZY DOTS and the NOVA card(s). Can I still use my previous video modes? Will my software be compatible? What about MagiC and NVDI? If I choose not to get NVDI ET4000, can I still use NVDI to load my fonts?

4. In regards to acceleration of the chip, are there other ones available than the CaTTamaran? Why does this have a reputation for being buggy? Why can't I 'plug-in' an 040 or 060 chip?

Thanks for any replies. Please email me or post for all of our mutual edification.

From: aa860@chebucto.ns.ca
Message-ID: <5giflc$7fk@News.Dal.Ca>
Source record: 125641

What are ST disk images and why does Pacifist need them? Do Ineed to make images from my disks before putting them on a hard drive and loading them from there? The Pacifist documentation seems to assume I know all about his, while the imgbuild program has no documentation at all! What does it all mean?

Yes. Alternatively (and perhaps more wisely) the old AUTo folder should be
renamed to something like AUTOX.

n> If you have XBoot you can rearrange the execution order. You can use
n> AUTOSORT.PRG as well.

Yes, I've had to use XBoot rather than Autosort because it allows more
programs to be listed - my Auto folder is a bit over-full...

The last version of Autosort I had was v4.1 - was there anything more recent?

# 5321. Wild & Wacky Auction (Going Twice!!!!)

Newsgroup: comp.sys.atari.st
Date: 1997-03-17 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970317042100.XAA27553@ladder01.news.aol.com>
Source record: 125643

AUCTION NOW IN GOING ONCE, GOING TWICE, GONE STAGE
Place your bids before you miss out on these spectacular rarities!!!!

---

Rules and stuff:
---
1. Send all bids to cvendel@aol.com
2. Send your mailing address with your first bid
3. Shipping is extra. I will calculate your shipping charge by weighing
your package and adding $1 for materials - Priority stuff <2 lbs will
be $3 flat. Shipping outside of US will be a little more.
4. Do NOT bid unless you plan to buy - bids may not be retracted
5. I reserve the right to withdraw any item
6. Minimum Raises are as follows:
$1 - $5 ==> .50
$5 - $20 ==> $1
$20 + ==> $2
7. Trades - Always accepted so long as its Atari or made for Atari
If you think you may want to trade, e-mail me your trade list ASAP
and I'll tell you what I'll take in trade.
7. EVERYTHING IS GUARANTEED TO WORK - Unless it says it doesn't work.
8. If you only want an update for one particular system or want to be
taken off this list, please let me know.
9. Payment should be in US funds. Checks and MO, will
be accepted. I would NOT reccomend sending cash, but some people seem
to
anyway. Checks will be held for approximately 1 week to clear. MO
orders will be sent out right away.
10. This auction will go into the G1,G2, SOLD phase at midnight March
15th.
One final post will be made to newgroups. A bidder who is not
on the update list may bid on a G1 item, but not a G2 item. Any
raise to an item in the G1 or G2 phase will result in the item
staying or returning to G1.

p>
p> Here are the most recent changes to NVDI - cut from ATOS 9701:
p> (Sorry, german only)

Excellent Petter. Thanks very much. Here's my Ruftraded translation:

Btw, I've got WDialog v1.11 (the mention of v1.92beta seems to be a typo?)
and COPS v1.05, but I've only got PATCH_NV.TTP v1.02 which handles v3-v4.10
of NVDI - has anyone got a location of v1.03 ?

~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~
Since the last mailing in the March 1996 issue we got several small updates
with version 4.11 (the current version is NVDI 4.11 r7). Here's a listing of
the innovations:

Release r4:
The 'Querdruck' (printer driver?) of the Atari-Laser functions again. In
order to get no problems on 'getunten' STs with alternative RAM as well
(e.g. PAK 030 with Fast-RAM), the driver memory explicitly demands to be
run from ST-RAM.

Release r5:
The 'skalierende' (scaling?) variant of the raster functions became
corrected for the case that, with a Bitmap in memory, the destination in
the Bitmap-description (MFDB) was not passed with Null. The error can
either be rectified with PATCH_NV.TTP (V1.03) or a disk monitor:

Search:

3e 2d 00 0c 3d 47 01 dc-53 47 ce ed 00 08 de 47
3d 47 01 da ce ed 00 06-2d 47 01 de

and replace with:

49 ee 01 dc 3e 2d 00 0c-38 87 53 5c ce ed 00 08
de 47 3d 47 01 da ce ed-00 06 28 87

PATCH_NV.TTP (V1.03) can be found with the current NVDI-GUIDE as well as
the provisional description of the new system-wide Print-dialog (WDIALOG
~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~~

v1.92beta).

In the printer drivers miscarriages could come with the output at the
start of the second page, if the application output exclusively with
raster functions, no clipping-rectangle were placed _and_ if insufficient
memory was available, after the printer-bitmap was directly built up.
These problems could occur with Signum and Script.

Release r6:
A crash while working with the NOVA graphics cards-VDI was rectified, that
would appear if text was rotated and with the attributes Border and
Underline output (so that the underline from more than just one line
continued).

By popular request the default mouse acceleration is now turned off. The
COntrol Panel Server COPS and a new version of the Window Dialog routine
(WDIALOG 1.11) are included.

Release r7:
The Routine for very complex Bezier-strokes (in the case that more
coordinates would be generated than would really be passed in the VDI-
internal arrays) is corrected. If main memory is still available, memory
will be allocated for best possible display, instead of to reduce the
Bezier-quality.

The Fonts & Caches CPX now no longer unintentionally changes the mouse
form. If a computer has more than 32 MB free memory no more negative sizes
are given.

The new COPS version (1.05) will be included.

**********
This word-by-word exchange from a German document, with some adjustments
for German idiom, was made with a registered version of Ruftrade2.
**********

This isn't the problem similar to the one I had where I was forced to use an EMail address of celerypatch@celerypatch.compulink.co.uk to get it to work, is it?

Something related to Demon (and old CiX accounts) that allowed multiple usernames or summat. Yes, it seemed to be a Newsie bug from what little I know...

b> 1.62 onto 6 EPROM chips ? How would I do that?

I don't know the answer to your questions tbh, but perhaps it's worth noting
that TOS 1.4 and below is on a 192K chip, while TOS 1.06 and 1.62 which
support the specific ST hardware of an STe are on 256k chips. Does this make
a difference?

As usual the "bible" leaves more unsaid than anything else. I think Theo's
'problem' was pretty clear in the quote shown above and the NVDI manual's
answer doesn't even attempt to answer it.

>please educate me :)

Copyright runs for 50 years after the death of the author, or 50 years
before renewal is required in the case of a corporate owner; so, in the
year 2040, if someone hasn't renewed copyright before then, TOS 1.4/ES
(Espanol) will become public domain.
```

For the modulator, I know Radio Shack has stores in Deutschland, and I'm sure there are lots of other places where you can buy a ready-to-use modulator; just connect the appropriate leads from the ST's monitor jack to the modulator's input.

However, if you have a PC monitor that can handle 15.75 kHz (or that neighborhood) horizontal sync, get the multisync FAQ from my ftp site and build yourself an adapter - the rez will be much better than even a fine Grundig TV set.

No. Software piracy is a civil offense - and it's especially offensive to software authors who read the newsgroups. If you're so damn' desperate, offer to BUY someone's used Starglider or - and here's a really NOVEL idea - contact one of the remaining Atari software dealers and buy and BRAND-NEW copy! Wow! Honesty! What a great new concept!

Geez, I am gonna be SO glad when spring break is over and the cheapskates^H^H^H^H^H^H^H^H^H^Hstudents go back to class and stop cluttering the newsgroups with "warez" requests.

> 
>What is wrong with you guys???

I dunno what's "wrong" with Paul, but as a software developer for the Atari paltform (and a contract employee of Intel), I can tell you that what's wrong with /me/ is that I hate software thieves. You want TOS 1.02? Buy an ST with the TOS ROMs in it, or get the owner of the ST to sell you jsut the ROMs. That's the only legal way to get them without going through a retailer.

>????? I think there is
>a little difference between a car and a rom-file.

The only difference is that the police don't usually come into your home and check your software license. Stealing is stealing, and no matter what mealy-mouthed lies you tell, stealing software is still stealing. Copying software and giving it away without the permission of the copyright holder is stealing; at least that's how the courts view it, even in the dk domain.

> If not maybe I will
>take a ride in my amiga-rom3.0 tonight.

I'll bet the pins will hurt when you shove that ROM up your fundament.

>Give me a German Tos 1.02 rom-file so I can try my little ST-emulator on
>my little amiga1200!!!

No. And any further requests for software piracy will be cancelled. Apparently tele.dk is a rogue site, perhaps your postmaster doesn't care about illegal activities going on at his domain, but after tonight, he can't claim he doesn't know.

>out of existence.

Their Web server has been knocked down at least once. Count on it
happening again soon.

Meanwhile, consider helping with the battle gainst spam on the fornt
lines - in the newsgroups. The following was written for PC users, but
it works even better for Newsie users, since we can insert anything we
want in the message headers (just have to do it manually):

You can cancel spam with any newsreader that allows you to define extra headers
(if you don't know what this means, you probably shouldn't be trying to cancel
spam yet; come back in six weeks). Newsreaders that definitely allow this
include Tin (using Pico as the editor), NewsXpress and Agent/Free Agent;
"newreaders" that don't work for this purpose include anything written by
MicroSoft, and Netscape. If you use any other newsreader, please let me know
what you find out.

Step 1 is to go to the setup portion of your newsreader and add 2 extra headers to
the "compose" part dealing with newsgroup postings. You need a Control: header
(put it right after Subject: if you can) and X-Cancelled-By: (which should be
followed by your email address). So you should now have these two new headers:

Control:
X-Cancelled-By: me@wherever.com

Step 2, when you want to cancel an article, do a follow-up and in the
subject line (after erasing the original subject) put:

cmsg cancel <copy the message-id here>

And really do copy the message-ID (should be found in the first line of
the message body if you have message quoting turned on) into that location,
including the pointy brackets.

You also need to add "control" to the list of newsgroups.

Then copy that whole line, except for the "cmsg" into the Control: header.

Finally, delete the entire message body and put in one line explaining why
it's being cancelled ("commercial sex spam" is always a good reason, as is
"MMF spam").

Now you have a message that looks something like:

```
From: me@somehere.NO.SPAM.com
Newsgroups: control,alt.spam.must.die
Subject: cmsg cancel <1234567@ladder01.aol.com>
Control: cancel <1234567@ladder01.aol.com>
X-Cancelled-by: me@somewhere.com

Commercial sex spam.
```

Now you know how to cancel spam. Do it! And tell other people how to do this; the more people who are cancelling spam, the better!

<SNIP>

Since the 4mb SIMMS sorta kinda work, and I think there are some jumpers on the RAMgizmo, I would suspect you have not remembered to reconfigure before trying the 1mb SIMMs. Also, use a new (not used!) pencil eraser to clean the contact patches on the edge of the SIMMs before installing - oxidation acts as a semi-conductor, causing voltage loss and signal degradation where the SIMMs meet the sockets.

>Also, can anyone point me to the pinouts for the keyboard connector on
>a falcon and the corresponding pins on an external keyboard's phone
>jack? I have a Mega ST keyboard that I'd like to use, so I'd like to
>build my own connector.

See alt.binaries.atari for the MegaBrd2.Zip archive - basically, you need to connect only 5 pins on the Falcon's keyboard jack to the 6-pin phone jack (Radio Shack part #279-420 in case that helps - you can remove the actual jack from the housing with some care and, in my case, run the wires out through the mouse port opening so the connector is hidden under the Falcon's case). The following numbers are from the back side of the RJ-11 connector with the lock-notch at the top, and from the "keyed" end of the Falcon keyboard plug (should be a yellow wire there on an old ST - I forget what color it is on my Bird).

RJ-11 Falcon
1 4*
2 4*
3 6
4 5
5 1 and 8*
6 1 and 8*

* - note that pins 1 & 2 are tied together on the RJ-11,
as are pins 5 & 6.

I just did this to Fearless Leader (my Falcon) tonight and am using a MegaSTe keyboard to type this article.

Use Modem2 on the MegaSTe and the Falcon at 57600 (or 115200 if your
modem can handle it; my Hayes can, my Supra can't).

On the TT, use Serial2 - the Modem2 port doesn't have any "standard"
rates higher than 38400. And if you're on a TT, get used to using
FastSerial and the associated CPX instead of the goofy stuff that Atari
called a "modem" CPX. <G>

# 5338. Re: Zip disks between st and pc

Yogi wrote:

> Is there a way to use a zip disk from an ST on a PC and vice versa?

If you run HDDRIVER on your Atari in combination with MagiC 5 or Big-DOS
you can directly access DOS compatible partitions up to 2 GByte. Without
Big-DOS or MagiC 5 the maximum size for DOS compatible partitions is 32
MByte.
Note that you only can exchange media that are DOS compatible. So you
have to create them with DOS or with HDDRUTIL (->HDDRIVER). With
HDDRUTIL you can create DOS compatible partitions on your Atari.

That certainly was the reason... but I have also read that Atari had some kind of legal protection on the number 400 (the name of one of its earliest 8-bit computers), and that IBM wanted a 400 of its own and had to pay Atari an undisclosed sum to get it!

No, Those are the dates at which the copyright was declared. Copyright only expires after a certain date, depending on your local copyright laws and the copyrighted media. (I think it is 20 years for software here in France).

That spanish TOS image is still under copyright.

# 5348. NVDI: halftones print too fine, big pics are blank

Newsgroup: comp.sys.atari.st
Date: 1997-03-17 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <HCROBGUQUp@tos.ak.planet.gen.nz>
Source record: 125670

I am using NVDI 4.11 to print to an Atari SLM804 laser printer on an Atari TT030 machine.

The software I am printing from includes Kandinsky 2.5 and Papyrus 4 (demo).

I have two problems with the printing:

* In both Kandinsky and Papyrus (I haven't tried any other software) any fill patterns other than black come out with an incredibly fine halftone pattern. My SLM804 (which must be at least 8 years old) has some trouble printing these fine halftones. They come out very light and in bands.

In the past, I have had NVDI printing much coarser halftones, which come out very well on my SLM804.

Unfortunately, I can't figure out what I did to make NVDI use coarser halftoning. Any ideas as to how this is done?

Does anyone else successfully print coarser halftones with NVDI 4?

* In Papyrus, large pictures do not print.

Any picture which is anywhere near a full A4 page in size just doesn't print - only white space is printed when I use NVDI in Papyrus. When I switch Papyrus to use it's inbuilt SLM804 driver, rather than the NVDI driver, the large pictures print perfectly.

Small pictures print without any problem in either case.

I have about 40MB (virtual) RAM available, so I don't think the RAM can be the problem. What else could be causing this problem?

Any ideas on what is causing the above problems, or how to fix them, would be much appreciated.

I do not know the original post, but reading the subject line, I'd say this is nonsense. STiK is not commercial, and never will be. In fact, adding features goes rather well recently. STiK is getting PPP and all sorts of other things.

Cheers Peter

[WBDAEMON]

JESJ>Be careful with that one!
JESJ>MagiC crashed before wbdaemon flushed it cache. Boom!

That's the price for speed :-) You'll have this problem with every write cache.

JESJ>Try running it in single-mode and the figures will be much more
JESJ>consistent.

Hehe ... but I don't want to test the single mode but the multitasking mode :-)

JESJ>but I've always found GEMDOS to be very fast and reliable.

But not the memory allocation and disk routines. Copy thousands of files with plain TOS and plain MagiC and you'll see (so I hope - MagiC is the best accellerator for my Falcon and 520ST).

Regards
Goetz

MK>Could be, but I can't realy say that I have noticed any difference.
MK>Atleast not on a 040 as I have now.

Hm. On my 68040 I can not use anything else than MagiC (Apple Macintosh with MagiCMac). I think the 68040 is so fast (even with TOS) that it is very hard to *see* any difference in speed between MagiC and TOS. But do some benchmarks and you'll see.

MK>Well if you don't worry about losing data you could use WBDaemon, but
MK>I would not.

I /do/ worry. But I never lost data while using the WBDAEMON.

MK>You should realy try AES 4.1 on a 040. It's _realy_ fast. You wont
MK>belive it.

I know. I tried N.AES on a 060 :-) But I also tried MagiCMac on a 200MHz PPC 604e :-))

CWS>Is it possible to adapt a VGA card from a 386 for use in an Atari
CWS>Mega ST4? I already use a VGA monitor with the help of a small
CWS>adapter (originally meant for a multisync monitor).

It is possible if it is an ET 4000 ISA card but you have to be experienced in soildering and things like that. There is a (german) project called "VoFa" which is an adapter for ISA graphic cards. And you have to buy NVDI ET4000.

(Sorry, I can't figure out what to clip and still make sense from the
balance)

>Now hold on, guys! In defense of the poor guy who originally posted, all
>he was asking was if anyone knew if either of the Starglider games were
>available for download anywhere...

That's true enough - but considering the discussion that has been taking
palce in ehre for that past week or two, it's hard to understand why
anyone would do that unless they were either (1) totally clueless; (2)
trying to start a(nother) flameware; or (3) both. Not impossible, of
course, just difficult.

> -- a reasonable request since they are
>very old games and perhaps they were released into PD as some older
>software sometimes is, or in demo form. He wasn't asking for a free
>handout necessarily!

Agreed. I /may/ have been precipitous - but, to paraphrase someone else
who has been active in the copyright discussion, I didn't accuse "the
poor guy," you simply assumed that I was referring to him specifically
(actually, I was - but my words aren't /proof/ of that, so if I wanted
to weasel out of it like "someone else" tried to do, I was all set for
it. <G>).

> It can be very hard to find older software, or any
>Atari software for that matter! It is extremely rude interject the idea of
>piracy into an innocent question and blast the guy for it!

A little thought makes it possible to ask such a question WITHOUT giving
the appearance of piracy, such as, "can anyone tell me if Mercenary and
Merc II have been released as freeware or PD software, and if so, where
I can download them?" In a world full of crooks, taking care to
seperate one's self from them requires constant effort.

>And then to
>just stereotype students (I am a college student) as young, moneyless,
>pirating cheapskate rejects out to steal as much stuff as they can on the
>net is totally appalling!!!

Now, now, in this case I most certainly did NOT mean to imply that all students are pirates, and my words cetainly weren't chosen to express that. It's just that the baby hackers seem to come out of the woodwork just about the same time that the classes close for a couple of weeks, and some of the recent posts carried ".edu" or ".ac" in their addresses or nntp posting hosts. Draw your own conclusions; I know the "endless September" is /not/ an urban myth.

>Yes, students tend to have less money (go
>complain to the people who set the high costs of a college education about
>that), and of course we're going to cut corners wherever we can to save
>money and ask if there's a possibility of something being free that we
>want or need. That doesn't give anyone the right to slander us! I'm sure,

If you really feel you've been slandered, I have two bits of advice for you (1) sue me, and (2) get a thicker skin; people are going to be expressign opinions you don't like for the rest fo your life, adn some of them will be deliberately insulting. I wasn't - but it's impossible to say ANYTHING without someone /choosing/ to be offended.

>unless you never went to college (in which case you have no right to make
>these interjections), that you've been here and know what we're going

Pardon me, but I have the right to make any interjections I choose where the topic of copyright is concerned. This is a public forum, and I am a software author. The connection is left as an exercise...

>through. So please stop making these rude and uncalled for remarks about
>this poor guy! Besides, even if someone requests something that's illegal
>not knowing it's piracy, it's much more appropriate and productive to let
>them know about it in a friendly, matter-of-fact way than to get on your
>high horse and spew your knowledge of legality at them! Now I'll get off
>my high horse and let you respond! :)

A week ago, we had someone come in here and ask for pirated copies of TOS. Several people tried to explain in civil terms that what was being requested was illegal, and were told to "fuck off;" the next request (from a different source, also in an academic domain) stated right up front that he knew it was copyrighted, but he figured that sicne it was "old" it didn't matter any more. If you one is bitten once, one tends to shy away from petting strange animals; bitten twice, one becomes actively hostile.

Don't take it personally, Mike, you're a long-time poster here and I think everyone considers you a good citizen. It's the latecomers who are either ignorant (which is curable but the patient has to be willing to be cured) or rude (which is also curable, but it requires surgical removal of the offensive rude person).

>>
>> The only thing I know about the HD is the number ST225.

Technically, this is a non-compliant article, but since I'm the moderator, who's gonna complain? <G>

The ST225 is a Seagate 20mb MFM hard drive; go to www.seagate.com and you can find specifications for all of their drives (I don't have multitasking installed right now or I'd do it for you).

Your BIOS can't do auto-detection becasue MFM hard drives are non-intelligent - they must be completely controlled, while IDE drives have a minimal onboard intelligence which lets them tell the BIOS what they are, and they handle some of their own control tasks.

It's possible that the onboard MFM controller has actually failed; if, after putting in the correct parameters, it still reports failure, I'd suggest getting an inexpensive IDE controller card (just ISA, nothing expensive) and an IDE hard drive.

I'm directing followups to comp.sys.atari.st - this isn't an ST, but it's Atari, so that will do for the moment.

: My mail to postmaster@atari.com bounced, oddly enough... and I haven't
: been bothered to investigate other avenues of contact.

It's not quite odd... I did a whois atari.com, and the contact is ahelbush@jtscorp.com, Alan Helbush, who is the admin, tech, and zone consultant. When I whois jtscorp.com, the ahelbush account becomes the billing contact. Who's the admin, tech, and zone consultant? Netcom Interactive, domreg@netcomi.com, of course. I wouldn't say it's unusual, for Netcom to be their feed.

Now, what do we know about Alan Helbush, besides what we know about him above, that he works at JTS?

: > receive at 38,400.

: How about some basic stuff...

: You neglected to say what model Atari you're using. Are you sure its set up
: to communicate faster than 38400? A stock ST or non-Mega STe can not*
: communicate faster than 19200bps. I think if you set one of these to
: 38400bps, you'll actually be running at sub-300bps speed...
: (150bps anyone? :)

I am, indeed, using a Falcon, specifying the exact same stuff for both
SLIP and PPP with SLIP working well set to 115,200/57,600, and PPP working
well at 38,400 (I set it to both the appropriate numbers and the replacement
numbers (e.g. 57,600 and <whatever the rate to fool the system into doing
57,600 is>) - neither work for MiNTNet. I can go to 57,600 using FSerial, but I do prefer
HSModem.

: On a MegaSTe or TT you must not* use Modem1, you must use Serial1 or
: somesuch... (not too familiar with anything newer than a MegaST... :P )

: On a Falcon, you should be OK. You should also note that just about every
: model of the ST has problems of some kind with serial ports. You should be
: running HSmodem no matter what... :)

Running STalker under singleTOS with HSModem is a bad idea. (Of course,
running STalker under MagiC with HSModem is a good idea, as it works great).

: This is all basic stuff that You Should Know Already. (TM) :)

Yep, I knew all this, but thank you for attempting to help me with this
anyway.

Could be, but I can't realy say that I have noticed any difference.
Atleast not on a 040 as I have now.

> MK>If I use GEM-Bench wich isn't the best program to judge this,
>
> Uuuh. Copy 1000 files with SingleTOS and MagiC (with WBDAEMON installed), do
> redraws, open dialogs and so on: MagiC is faster. GEMBench is a funny
> programme, it doesn't show me the same percentage if I use it twice with the
> same configuration.

Well if you don't worry about losing data you could use WBDaemon, but
I would not. I still can't find MagiC faster. Maybe a little, but not
that much faster as you say. You should realy try AES 4.1 on a 040.
It's _realy_ fast. You wont belive it.

> MK>On a regular Falcon the difference between MagiC and TOS is so small
> MK>that you doesn't realy notice it.
>
> What? I hate it to use TOS on my Falcon because everything is so
> slow.

I hate to use TOS becuse I can't multitask .Other than that, TOS feels
faster to me.

# 5372. Re: ST disk Images?

Newsgroup: comp.sys.atari.st
Date: 1997-03-18 00:00:00 UTC
From: !ynoT
Message-ID: <332f6329.6852151@news.airtime.co.uk>
Source record: 125539

On 17 Mar 1997 04:00:44 GMT, aa860@chebucto.ns.ca (Steven Slater)
wrote:

>What are ST disk images and why does Pacifist need them? Do Ineed to make

Pacifist does not (at this time) use your actual drive A, the
physical real life Drive A, so think of the images as pretend drive A,
this actualy works well as you can make as many as you like, you can
have all these in your pacifist folder and swich between them at the
press of a couple of buttons, you can use them for drive B as well,
Once you have the desktop up you can access the image as you would
drive A, simply click on the icon and your image is there, you can
delete, copy, save to etc, just like a normal drive A..:)

>images from my disks before putting them on a hard drive and loading them
>from there? The Pacifist documentation seems to assume I know all about

Well I never knew what one was until I got Pacifist, its all in the
accompanying doc files?

>his, while the imgbuild program has no documentation at all! What does it
>all mean?

Again there is documentation for image build but have to admit I got
the hang of it through trial and error as apposed to the file,

Ok to use the imagebuild,

Use from DOS or a DOS window,

Get yourself in the flder where the imagebuild.exe is

Put your ATARI disk in drive A, this does not have to be formatted for
the PC to read, odd formatted disks also work,

now type

imagebuild/read /auto /name steves.st

*** exactly as above with the gaps... you can change the word steves
to anything you want, some people dont put the word *name*, they
think that was an instruction....like I did originally :) ***

imagebuild will then READ the disk in A and AUTOmatically get the disk
configurations etc, and will save it with the fileNAME steves.st

IF the disk in drive A has a auto folder then on running pacifist your
game/app or whatever will auto run :)

Is that a little clearer,, also you may want to ask in
comp.emulators.misc as this is after all PC software?:)

If you mean the old 8-bit stuff, check out http://www.emulators.com/ - home of the guys who wrote PC XFormer, the 8-bit Atari emulator. As well as selling XFormer cables to do the thing you want, they have plans available to build your own cable.

ATB, Frank.

If he is able to store each of this programs in only one quark,
there are not enough quarks in the whole univers to store
every of this programs.

If you've upgraded your machine to have an HD floppy-drive of
course it supports HD disks.

><smipped>

Hmmm....sounds like "Versit". Versit is an open connection standard for
connecting anything <-> anything. What is happening in the comunications
biz is that the P(A)BX manufacturers are setting up their boxes so that
the available bandwidth can not only be used for voice, but data as well.

This is the way things are heading. So it would be nice if Amy gets a way
of conecting (as I imagine it will through the use of external networking
products...)

>for me.

I have both HSmodem7 and FastSerial in my AUTO folder on the Falcon -
it seems to help. Can't use the Fast_ser CPX, but that's OK. Order of
battle: DRVIN.PRG, then FAST_SER.PRG, and finally SCC.PRG or ESCC.PRG (I
have an ESCC).

My DEFAULT.CFG for STiK (which of course I'm not using, since I have
MiNTnet working) looks like this:

```
ALLOCMEM = 150000
SERIALPORT = Modem 2
CDVALID = FALSE
DIALFILE = dial.scr
CLIENT_IP = 0.0.0.0
TTL = 64
PING_TTL = 255
MTU = 576
PKT_SIZE = 256
DFB_SIZE = 1580
RCV_WND = 11680
UP_RESPONSE = 2
USERNAME = Atarinet Portland
FULLNAME = atari
HOSTNAME = teleport
NAMESERVER = 205.198.190.100
IRCNICK = atarinet
IRCSERVER = irc.blackened.com
IRCPORT = 6667
```

and my DIAL.SCR (which in theory is not used):

```
BAUD_RATE = 57600
HANGUP = ATH
PREFIX = ATDT
INIT = ATZ
CONNECT_WAIT = 60
REDIAL_DELAY = 20
PHONE_NUMBER = 220-1016
SUCCESS = CDWAIT
FAILURE = BUSY
```

```
FAILURE = NO CARRIER
FAILURE = NO DIALTONE
FIND = login:
RESP = atari
WAIT = 0
FIND = assword:
RESP = that's a secret
WAIT = 0
FIND = IP address:
RESP = $GET_IP
WAIT = 0
```

## 5382. Atari ST software for sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-18 00:00:00 UTC
From: ci086@FreeNet.Carleton.CA
Message-ID: <5gmet0$2pq@freenet-news.carleton.ca>
Source record: 125549

I have the following software for sale. Prices are in Canadian
dollars--I would prefer to sell locally (Ottawa, Ontario)--and
shipping is extra. Multiply by 80% for US price.
E-mail if interested.
Thanks,
Bill

Software:
$20 each:
HiSoft BASIC, ver. 2
UltraScript ST-1, PostScript interpreter for printing on laser,
ink jet and dot matrix printers, with the UltraScript Type collection

$15 each:
Calamus 1.09N
Fleet Street Publisher 3.0

$10 each:
Diamond Edge, for hard disk management, optimization, diagnostics,
and data recovery, Oregon Research Associates
Diamond Back II, hard disk backup and restore software,
Oregon Research Associates
MultiDesk Deluxe, accessory manager, CodeHead Software
NeoDesk 3, replacement desktop software, Gribnif Software
CYBERPAINT 2.0
Spectrum 512
GFA Draft Plus, 2-Dimensional CAD program

$5 each:
Master CAD, for 3-D design
GFA Raytrace
SEURAT, ver. 2.0, paint program
Mug Shot!, Wiz Works
MVG: MultiViewer Graphica, bit image editor, manipulator and viewer,
with MVG Modules Disk #1 (tools for MVG)
G+PLUS, ver. 1.2, GDOS replacement, CodeHead Software

$2 each:
STyle 1.0, image manipulation, Zocra Technologies
STipple 1.0, ST image file viewer, Zocra Technologies
STalker 2.0, terminal emulator, Strata Software
Word Search Creator and Crossword Creator II, word puzzle creation utilities

Take all the software for $35.

Books:
COMPUTE!'s Technical Reference Guide, Atari ST
Vol. 1: VDI
Vol. 2: AES
$3 each

The Atari ST Book $1

But, it is relatively easy (if VERY time consuming) for a fairly simple
program to produce every combination, ie the program itself would be
quite small, but, -time needed, unbelievable at todays cpu speeds....

Still, it could search for a particular program (-long series of numbers)
and prove that IT , 'knew' (or had within its capacity), that
program,-before-
said program was copyrighted! Still would take a *long* time...

I believe some 'FRACTAL' equations are being used for similar purposes.
Also for packing, which (I believe) is also related in some ways to current
topic. Snapper.

# 5391. ICD Link 2

Hello World, oh and the rest of you!

Just a question I want answering, that no body seems to know the
answer to, but many could probably have their own idea over....

How come System Solutions charge 20quid more for the ICD Link 2 than
EVERYBODY else ?

bugger is no-one else has got one atm :(
well sorry SS your not getting my money I'll wait a few days more and
get one from one of the three other companies that are selling it
20quid cheaper than you :P

BTW anyone want an old GE-soft adaptor that will quite happily talk to
Hard Drives but not a CD-Rom, going cheap ;)

Ade.

Quite possibly, but does nayone actually know, I'll have a dig around on
the Web in a moment and see if I can find out what limitations there are
although I wouldn't think they were too dissimilar to the standard
software licences that are so popular now.

I appoligise for attributing that as a quote however you said that you
found the current copyright laws not to be sensible {not a direct quote]
in my mind 'stupid' is the opposite of 'sensible'.

> I merely*implied* that that it could be "more sensible".

There was no implication, it was very clear cut.

> This is due to the original copyright laws being based around
> printed material and other pre "computer-age" stuff.
>
> The copyright laws probably allowed more magnetic stuff to
> be "legally" stolen, due to it's antiquated nature.

I don't know enough to comment on the original copyright laws but I
expect they have been updated, infact I'm pretty sure something happened
around 1988 that tigtened them up for computers. Admittedly before the
time of some TOS versions.

> > > And anyhow, who'd give a damn if TOS did get stolen? It wanted

There are more important things to worry about but that is no reason to ignore the smaller problems, you don't ignore traffic offences because there are murders out there, you don't ignore pet-theft because there are rapists about etc.

> > You seem to think that it's shit but also agree that

> *to personal opinion I suppose.

Crpa analogy IMHO. The people that do buy Kylie's records DO think they are good and they also buy them! They don't buy them and think they are crap. The awful 'argument' dragged up here is that they want the Images, email them ASAP if you have them, tell them it's wrong and "Why do you care it's a pile of shit anyway." is they type of retort often seen here.

>

When the licence says so. I don't know the particular case for your
newsreader but many programs require you to register after X days, if
this number of days has passed, you have broken the licence and the law.

> RT> Buy a copy of TOS, or get lost. Thieves are not welcome.
>
> Yeah they are pretty easy to get!! Ok I will go to my Atari Store

Why is that funny? What's wrong with your Atari store, if you don't
have one then what's wrong with mail order?

> moron

Pretty odd to sign yourself off "Moron", you should really get help with
your lack of self esteem.

Write-On can do this. It was given away on an ST Format cover disk - I
dunno which issue. It was designed for mono displays but will run in
medium, although you can't seen many lines at once!

Btw, you should be able to get the old GDOS (1.1 iirc) working with a
few fonts in any case.

>images from my disks before putting them on a hard drive and loading them
>from there? The Pacifist documentation seems to assume I know all about
>his, while the imgbuild program has no documentation at all! What does it
>all mean?

Disk images are files which ae virtual disks with the programs and
files to be run on Pacifist or any other emulator. (This is normal)

I suspect that in a number of DOS programs, there is text which is
printed out when you enter a parameter in the command line(which is
stupid because you don't know what it is without reading the text).

I loaded the program in my text editor and found the instructions at
the bottom. Just remove it from the garbage and you have a doc file!
:)

If anyone is interested, I can post the instructions on here and
maybe the emulation newsgroup as well

As an accessory. Under Magic 2 you can launch it direct from the
desktop and the menu entry will appear. I have not tried it with
recent betas though so I dunno if it will still work. In any case,
STiK is migrating into a TSR so this problem will be moot!

>a "resolving host" message which keeps going on forever.

I dunno anything about TIA but usually the "resolving host" problem is
usually due to an incorrect setting for NAMESERVER.

>I can't even exit the program or anything (the funny thing is that the
>computer hasn't frozen, because I can access the menues in CAB, though
>they're all greyed out). But the only way to exit is to reset the
>machine.

It does this whilst waiting for cab.ovl to return whatever Cab asked
it for. In turn cab.ovl may be waiting for STiK.

# 5403. Conner CP30200

Newsgroup: comp.sys.atari.st
Date: 1997-03-18 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.95.970318202625.29943A-100000@moose.erie.net>
Source record: 125570

I'm trying to format a Conner 30200 (213 Meg) for use on an Atari 1040STe. I'm using an AdSCSI+ host adapter. The Drive is recognized by ICDBOOT 6.5.5 Pro and also by the IDCHECK program, but it will not format. The SCSI identification also include SUN 2070 or something similar, so I assume this drive was originally delivered in a Sun work station.

The drive spins up okay, but when you go to format it, the busy light goes on and stays on and there is no aubidle evidence of the heads moving. The terminating resistors are in (although I've tried it with them out also.) and there is nothing else on the SCSI or ACSI bus. THe SCSI ID has been set to 0 and 1 with the same results.

I'm going to check the drive out on my Mac at work, but in the mean time, if anyone has any suggestions.....

# 5404. Re: ACCEPT MAJOR CREDIT CARDS !!!!!!

Newsgroup: comp.sys.atari.st

[courtesy copy of this post sent to cited author via email]

In article <5gijsg$pp9$7@nadine.teleport.com>
atari@teleport.NO.SPAM.com (Rich Tietjens) said:-

>You can cancel spam [...]

No, sorry, this is not the correct way to cancel spam. First, there are precise rules to know what is spam (and EMP/ECP/MMF), and what is censorship. Second your technical explanations are false, if we follow your advice the spam would not be cancelled on all servers, and extra traffic would be generated, so in some cases the cancels will take more bandwidth than the spam...

I wrote some time ago an article <855151800_OASIS_@nordnet.fr> in reply to a post by you in this group about cancels, you obviously didn't receive it?

>You also need to add "control" to the list of newsgroups.

No, not at all. Control is not a real newsgroup, it is not shared between servers if they are well configured, it is sometimes named control.cancel or even another name, it doesn't exist at all on some servers using another way to store control messages, and it can lead to wrong distribution of a cmsg to servers not carying the original group(s).

>From: me@somehere.NO.SPAM.com

No, the cmsg will be refused by servers configured to verify if the sender is allowed to cancel. Such an unused cmsg will only use bandwidth and disk space in addition to the spam.

There are also other points to follow to make a good and efficient cancel message, like a special Message-ID (to avoid duplicate cancels by 173 cancellers for only one little spam) and something I can't remember with the "Path:" header.

>Now you know how to cancel spam. Do it! And tell other people how to do
>this; the more people who are cancelling spam, the better!

Don't do it like this. Read the cancel FAQ. Read RFC 1036. Read son of RFC 1036. Read news.admin.net-abuse.* groups. Then don't spread this knoweledge too widely as it could be used by bad guys for bad things (clearly don't explain it in a newsgroup ;-). And if you find the cancel FAQ tell me where, I can't find it...

Bye! Bruno.

SS> How much are these ZIP Doohikie's these days. What about those
SS> Syquest?

Speak to Al Goold at STAG. They've got some contacts at Syquest in Scotland
and they've even had them come over and demo the machines at a UG meeting.
Apparently there are some Atari owners on the Syquest staff, so they ought to
be able to help pretty well.

Also, some of the guys at the STAG meeting (!) immediately bought Syquests
after the demonstrations they were given - that must say something.

I don't have one myself...

# 5407. TT video enhancement, video cards

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: please@no.spam.mail.here.mettav
Message-ID: <31951_please@no.spam.mail.here.mettav>
Source record: 125424

*Hi Brett*, on 18 Mar 97 you wrote: ...respect, brethren

d>
d> With all the great and useful add-on boards, accelerators and video-
d> fixes available for the Falcon 030, what options are there available
d> for the TT? I am especially interested in video enhancements.

Matrix, Nova or Crazy Dots VME graphics cards. I use the latter.

d> OK - I know that the TT uses a non-standard VGA output. What are the
d> fixes and what are the drawbacks?

The VGA is standard AFAICS. Certainly, when I plugged the SVGA into it the
picture was fine for TT-low and TT-med and the ST resolutions. You must be
talking about the TT-High res, which only sems to be available (as standard)
using an ECL compatible monitor (TTM194).

d> 1. Is there a software fix for the video mode? Is it software
d> compatible?

It's a hardware thang.

d> 2. Is there a hardware fix that doesn't change the video modes, but
d> allows greater resolutions and the video output (i.e. the cursed
d> 4/5ths screen)?

Graphics cards...

d> 3. I know that one can use a graphics card such as CRAZY DOTS and the
d> NOVA card(s). Can I still use my previous video modes?

If you disable the REDIRECT software and install a an ASSIGN.SYS that doesn't
call the alternate screen drivers, then you don't have to remove the card to
switch back to standard resolutions. Of course, you have to re-attach the
monitor to the normal VGA port...

d> Will my software be compatible?

Depends on the software frankly. Some does and some doesn't. Generally it's
fine for the stuff I run.

d> What about MagiC and NVDI? If I choose not to get NVDI ET4000, can I
d> still use NVDI to load my fonts?

Yes. There'll be dedicated software screen drivers for whatever card you
get, but generallyspeaking you lose some flexibility with the resolutions on
your card AIUI.

In the adverts for NVDI4 I noticed that it states that NOVA-VDI is now
built-in, so you wouldn't need a new version of NVDI AIUI. Not sure if this
is also the case with ET4000...

Magic is no problem at all.

d> 4. In regards to acceleration of the chip, are there other ones
d> available than the CaTTamaran? Why does this have a reputation for
d> being buggy? Why can't I 'plug-in' an 040 or 060 chip?

Dunno about that. I'd like to hear some comments on this myself.

Dumbass, cheapo design.

Putting it into another case wouldn't do any good as you'd still need to mod
the PCB to feed the 5V if I have the right end of the stick.

Speak to 'ya later!

cg> is appreciated.

I'm trying to remember the situaton wrt a base machine like this. I thik
that unless your printer contains fonts that Protext v4.3 can access and
switch then you're stuck. I tried to do this with v4.3 but either the
printer drivers weren't adequate or the printer itself didn't hae the
capability.

One of the purposes of GDOS was to enable this soort of thing to be done. If
you want to do this you'll have to bite the bullet to some extent. I'd say
that it is possible on a dual floppy setupwith GDOS and maybe a little more
RAM, but otherwise I'd struggle to suggest a way.

Perhaps you could ask if anyone is selling Calamus v1.09N cheaply on a second
hand basis? This might do it of you call the fonts from a virtual drive B...

# 5417. MIDI sequencer

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: Rolf Nilsson / RONI MUSIC <roni@mbox317.swipnet.se>
Message-ID: <3330525C.2C31@mbox317.swipnet.se>
Source record: 125434

Affordable sequencing

It's amazing the things you come across at times Little treasures just lurking out there to be found....

I first read about Sweet 16 on the internet, in the comp.sys.atari.st. newsgroup. Big deal, another ad. Demos available. OK, I'll give it a try. Well, I'm impressed! I found a good MIDI sequencer at a reasonable cost.

Sweet 16 will work in any resolution on any Atari ST, TT or Falcon. This is great because not everyone has a mono monitor. I tested it out on my Mega STE with a mono screen. There are two versions for testing. A DEMO and a LITE version. The LITE does not have all the functions that the DEMO has but it does allow saving song files. (But not MIDI files) The DEMO does not allow saving at all but does have all the functions anbled. I will review the DEMO.

NOTE: Sweet 16 does not have any score editing or printing features. I emailed RONI music and they said that this is not in the pipeline because this would add greatly to the cost and not that many people wanted it. (I'm not so sure about that. It would be a nice option.)

Sweet 16 DEMO is a 16 track MIDI sequencer. It is very similar to Notator. It has a 'Pattern 'mode and a 'Song' mode to compose with. In 'Pattern' mode you can make up different patterns and link them up to make a song. eg. Intro, verse, chorus, verse, chorus, end. Song mode is continous recording of each track.

The main page has plenty of information and features. It shows the 16 tracks and shows all the usual features like naming tracks, transposing, muting, soloing, MIDI activity etc. etc. It is quite comprehensive and easy to use. (In other words I didn't have to read the manual:-) Hit the mixer button and there is a really good 16 track mixer that allows easy mixing of your file. It reatures volume, pan, reverb, chorus, solo, muting, snapshots, quantising, program change, and all this in real time.

Hit the EDIT button on the main page and you can choose between a Piano Roll editor or an Event Editor. Here's where you can manipulate data to your hearts content. (I won't go into detail:-) There's heaps more! All MIDI functions and filters etc. Remixing and mixdown of tracks... too amny things to cover here. Get the DEMO and find out for yourself.

The cost is USD 49.95. This includes a 50 page manual.

SUMMARY

If you need a very inexpensive sequencer and you don't need scoring, then Sweet 16 is well worth getting. It is also available for the PC. This means that there will be ongoing support and development. That's very important in the Atari world!

Check out RONI Music on the internet.

# 5419. Mega ST Keyboard

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: Mark Burmeister <pearl@deskmedia.com>
Message-ID: <333072C9.2C18@deskmedia.com>
Source record: 125436

I found a used keyboard for my Mega ST but have not been able to get it to work. The keyboard came without a cable, and I have tried an R11 and R12 (I believe that's right, 4 and 6 conductor phone cords) cable without success, although the computer does stop its no-keyboard beeping. The power light on the keyboard also does not light, key punches aren't recognized, and the mouse is not recognized. I would appreciate any information on finding/making a workable cable or finding out if the problem is elsewhere.

# 5420. Re: 14MB falcon upgrade and external keyboa

Message-ID: <858765075.769042@nachos.wr.com.au>
Source record: 125437

On 16 Mar 1997 14:42:24, Wes Nakamura wrote:

Hi all,

I'm having trouble trying to upgrade my 4MB falcon to 14MB. I have a RAMGizmo, which takes 4 30-pin SIMMs. I also have 2 sets of SIMMs: the first is a set of 4 70ns 4MB non-parity SIMMs that used to be in a TT, the other is the set of 4 1MB SIMMs that originally came in the TT. Both sets worked flawlessly in the TT. The original 4MB falcon memory board, which is what's in the falcon now, also works flawlessly.

When I use the 4MB SIMMs in the falcon, things appear to work normally, except the display has some irregularities, mostly thin multi-colored vertical lines. It seems to run all right, although I haven't left it running long enough to see if it would crash. It passes the initial memory test with no problems.

The 1MB SIMMs really screw up the display: it ends up with about 4 horizontal copies of the initial Atari bootup logo, except they're cut in half vertically. The internal IDE hdd also started to go crazy, so I turned the machine off right away.

Is the falcon more picky about memory than the TT? If the fact that the memory worked in a TT means it should work in a falcon, where can I get a replacement board that can use these SIMMs?

If the fact that the memory worked in a TT doesn't mean anything, and so either the memory or the board is at fault, where can I get a reasonably priced board that's guaranteed to work?

In short, any suggestions? Unfortunately I don't have another falcon, a different ram board, or other SIMMs to test with. Obviously I'd like to use as much as the equipment I've already got if possible.

Also, can anyone point me to the pinouts for the keyboard connector on a falcon and the corresponding pins on an external keyboard's phone jack? I have a Mega ST keyboard that I'd like to use, so I'd like to build my own connector.

Wes.

Hi Wes.
You can't use TT ram on a falcon. You need to get a new ram board like the 16meg board from Wizztronics and insert a 72pin 16meg simm into it. It fits in nicely to where your 4 meg board goes.
regards
Steve

# 5421. query - adding a new hard drive Atari STFM

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: mark@bluemark.demon.co.uk
Message-ID: <33304c79.9726852@news.demon.co.uk>
Source record: 125438

I am enquiring on behalf of a friend who owns an atari STFM and would like to add a hard drive to it.

I am not an ST owner myself so am totally unfamiliar with Atari hardware but extremely familiar with PC hardware and software.

Any information anyone may have about the drive types which should be used, the interface on the back of the unit, cabling etc would be gratefully received.

If possible please email me direct rather than respond to this newsgroup as I am very oversubscribed to groups these days!!!

Many thanks in anticipation of your assistance.

Mark

What's happened is that the service provider we at Current Notes relied on
for at least the last year - Internex Online - went under in January, swallowed
by a US provider that cut off SLIP access and gave the users one month to
change over to their current service. As you can tell, we've had to scramble
to get new providers (ironically, you CAN still access the web page, though
it hasn't been updated in some while).

Here's the current addresses:

Howard Carson - lrhc@interlog.com
Robert Boardman - redfrog@outer-net.com
Dan Dreibelbis (me) - dreibel@idirect.com

P>Now, if there was some form of thru-port it would become interesting
P>again...

Martin's ram card does *not* use the VME slot, its internal. But I would
recommend to install a PAK with FRAK instead because with a FRAK your ST
can have up to 64 megs of FastRAM.

Hmmmm, probably John Perez (U of Hawaii, I think) could answer that -
but you might find it simpler to simply buy a used ST or STe these days,
and keep the old one for parts. 'puters are advertised in here every
day, it seems.

You sure that's not T&A? <G> (See #1 if anyone is confused.)

BTW, Q&A can be submitted via email - either direct to me, or from my
Web site, with "Q&A Submission" in the subject line, if you please.

>3) Tell the status of previewed software. Example: is Freedom 2 available
> now? This month? This year?
>
>4) Where is all this great shareware reviewed hiding? Many (most?)
> Atarians don't have a local PD shop.

In North America, there are quite a few AtariNet and NeST BBSes which
provide PD and shareware - even more in Europe, I think. Mine (to toot
my own horn) is STarship, at 503-244-2870; 4 CDs and 4 gigs of hard
drive (with 4 more in reserve in case the drive fills up or soemthing).

>5) Add programming tutorials like in ST Review. R.I.P.

Unless I'm confused (even more than usual, that is), Joe already got
someone to do a series on programming; I recall an article in #3.

Following For Sale:

SLM804 Atari Laser Printer, recently changed drum, works great!
Asking $100.

Sc1224 Atari Color Monitors, factory 'refurbished', original
box/docs. $55; Used, good condition. $45

PCM124 Atari PC Monitor, new, 9pin connector, original box, asking
$50.

***SCSI TOWER: 6 SCSI devices in all, wired together in one 'new'
tower case with power supply/fan. Has single 50 Pin connector on back
for ICD LINK 2 SCSI Adapter, included, with cable. Recently
constructed by Alex Yu at ATY Computers. Here's whats inside:
85MG Seagate HD, Sony CDU-541 CD Drive, ICD 155MB Tape Drive(5 extra
tapes + ICD backup software), 540MB FUJITSU HD(NEW), 50MG
Seagate(NEW), another 50MG Seagate.
***Tower will boot automatically to any ST/STE without internal hard
drive. Full instructions to install to a MEGA ST/STE/TT with internal
hard drive. ICD driver software and ExtenDOS PRO software included!
***ASKING $550

1040 STF's, 1MG, good, used condition. $65

Jaguar Game System with CD Player, 2 Controllers, Raiden, Highlander
CD, Braindead 13 CD, Tempest 2000 Soundtrack CD, Blue Lightening CD,
MYST DEMO CD, Vid Grid CD. Like new, all original packing/doc's.
Asking $150.

ALBERTT VIDEO CARD, for MEGA STE or TT. Display 1024x768, 16 colors
from a palette of 4096. Dover Research. In box with driver software
and install instructions. $125.

AEROCHOPPER Remote Control (R/C) Aircraft/Helicopter Flight
Simulator/Trainer. Includes actual 'FUTABA' "CONQUEST" 4 Channel
controller(just like the one you fly with!). Controller plugs into
the cartridge slot on an Atari ST. Software, manual and original box
included. Excellent Condition. Brilliant program for a 1 MG Atari.
Asking $125.

Buyer pays shipping costs. Ship from New York, USA. US and Canada
customers only, please!
software list to follow...

s>
s> Well there is a VME slot memory board to take your Mega STE to 10 MB.
s> ~~~~~~~~~~~~~~~~
s> Martin_Wevelsiep@ac2.maus.de (Martin Wevelsiep) designed the board.

Thanks for the information Jan. I had heard about this board (or a similar
one) before, but if it used the VME port it always loked to me like it
partially defeated the object of one of the main causes for lack of memory
was due to setting aside up to 1Mb for screen RAM using a graphics card with
that same port.

Now, if there was some form of thru-port it would become interesting again...

>> The 605 drum is compatible with MANNESMAN TALLY MT905DM

A> The MT906 drum set even has the page counter....

Yep, but I'm told that it's possible to modify the original counter so that
it no longer prevents the printer from working once it reaches 10,000 copies,
with some track cuts in the counter (I don't have the details I'm afraid).

Speak to 'ya later!

You can try the Logic User's website; you can subscribe to a mail group that might be able to help you. You can find a link to it from http://www.emagic.de .

Unfortunately, I don't think Logic Audio Atari is still being supported by Emagic.

Good Luck!

>BUAF in your sig... (kinda like mine...)

Hi Callum,

Very creative. "Eat spam and die", eh? I wonder what Hormel would think of that! Of course the trick is to use an effective spamblock, but have the NG readers be able to understand your real e-mail address. If you put your e-mail address anywhere in the header OR the text message the bulkmailers will find it ;)

I was thinking of getting "nasty" with the most obnoxious spammers, but that's NOT in my nature nor do I want to stoop to their level...

However, I don't think Government regulations are the answer either. I know there are literally millions of people fed up with spamming. So a little creative programming may be the answer; both legal and effective.

As my programming experience is limited to Fortran IV, I think a few "Night Class Courses" are inorder for me :) Most bulkmailers use similar prgs and Windoze, so I'm sure there are cracks in the software that can be exploited.

Wouldn't it be ironic if an Atarian developed this software? "Nasty" or otherwise; It would be a BIG market...

Thanks to ALL for their posts on this subject.

Charles

>all mean?

I don't know what you are complaining about, since you understood correctly.
The Pacifist docs ar quite straightforward. You have to make image files of
your disks (.st) for the emulator to read them and put those into your
pacifist directory.

Just a little tip: when you're not sure about something, why not just try it
and see what happens?

A more convenient way of transferring files to the emulator is putting them in
the Pacifist's harddrive directory. The disk image stuff is useful for game
disks.

This wasn't meant to be the start of a 'my compiler is better than your compiler' war, merely an example of MagiC not being able to multitask in supervisor mode.

Sure there is. I use UNIX when I get online and to unzip a file I just
type: unzip file.zip

I've also heard that some systems use the format: zip -x file.zip

No, it just means that the copyright was renewed in those years because
it was modified. The copyright is valid for 50 years (IIRC) from the
creation date, so this will be free to distribute in the year 2039...

Image Build when run with no parameters tells you what it does and what
parameters to use.

That this is beyond most people is quite amazing to me; are that many people
running it from Win95 and having the window close on termination??

Anyway I've had several requests for a 'How to use Image Build' page to go along
with my 'How to use PacifiST' bit so I'll knock that up tonight and stick it on
http://www.jetman.demon.co.uk/st/index.html

# 5458. Atari ST 8 or 16 Meg Ram

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: antbbaker@aol.com
Message-ID: <19970319011200.UAA23033@ladder01.news.aol.com>
Source record: 125504

Hello,

I have a Macintosh PowerBook 5300cs and a PowerMac 6100. I also have about 2 800XL's and 2 130XE's with 5 1050 DD and an XF551 and a whole bunch of other stuff for the 8-bits.

I just recently ordered an Atari MegaST with a 20 Meg HD and a whole bunch of other stuff.

Now time to get to the point. As most of you ST owners know, there's is an emulator for the ST that emulates the 68K Macs since the ST and 68K Macs have the same Motorola processor. Now since this is a MegaST, it can be upgrade to 4 Meg(?).

I was wondering, in order to run anything made for Mac (that's worth anything), a system needs at the VERY least 8 Meg RAM. Now, there are several 3rd party companies that are still manufacturing stuff for Atari (yeah!!). I was wondering if there are any custom made simms for the ST so it can be upgraded to 8 Meg RAM or even 16 Meg RAM.

If anyone knows the answer to this question, please E-mail me to one of the following addresses.

AntBBaker@AOL.com
AntBaker@Myst.Hub-BBS.com

Thanks.

This is something which realy anoy me. Is the fault by the Lattice
editor or the compiler it self? If I compile from a shell am I able to
switch task then?

# 5461. STE memory (RAM) upgrade question

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: Tim Pattison <tim@ravenhouse.demon.co.uk>
Message-ID: <hnYUuDA1T8LzEwKN@ravenhouse.demon.co.uk>
Source record: 125507
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I have 4x1mb 30 pin simms which I intend to install in my STE. The speed rating is 80 nanoseconds.

Is this O.K. for the STE. Does the wrong speed cause conflicts with the motherboard, or is it a case of the faster the memory the better?

Thanks in advance. (replies by email or newsgroup-either is fine)

Parity would be my first guess. If the Mac likes the drive and the ICD
doesn't, I'd definitely say parity.

>(clearly don't explain it in a newsgroup ;-). And if you find the cancel
>FAQ tell me where, I can't find it...

I've read the FAQ (it was posted in n.a.n.a just today) and all the
RFCs; I read n.a.n.a.m daily. The newsmasters aren't taking effective
action. The spam level is increasing. If the average citizen doesn't
do anything, within 3 months the ONLY thing on the 'net will be spam.

Either we cancel spam on sight, or the news admins get their sh*t
together and put an end to it. I prefer the second option - but in the
year+ that I've been reading n.a.n.a.m, they haven't done enough to even
keep the spam level constant, much less reduce it.

I will continue to spread the word on how it's done. When there's
effective measures in place to prevent the problem, I suspect the
servers will reject cancels routinely anyhow - and we won't need them.

Hi Tim,

From what I had been told 80ns should be ok. If you go faster than that
you might run into timing issues but that is only what I have heard(from
a person that has worked with Atari's since 1981). I am planning on
doing the same upgrade to my STE and that is why I had asked him. He
told me anything in the 80-120ns range will work fine.

Hope this helps,
Christopher

# 5466. 1 MB (Broken) STe for sale (UK only)

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: "r.c.smith@herts.ac.yk" <rs5ba@herts.ac.uk>
Message-ID: <Pine.SUN.3.91.970319150857.23157A-100000@altair.herts.ac.uk>
Source record: 125512

Dear fellow Atarians,

Sorry about another advert for an ST for sale but I gotta try. Replies
to me personally please at: r.c.smith@herts.ac.uk. Offers welcome.

I am currently in possession of 2 atari STe's. One is working, the other
not.

It is the broken one that I wish to sell. Due to it's condition it is
really only of use to an existing owner, or someone who wants to repair
it and sell it on.

For Sale (uk only, p+p inc.):
----------------------------
Atari 520 STe, 1MB RAM, TOS 1.6 (50 ukp inc P+P)
1/2 MB upgrade for 520 to a 1040 STe (10 ukp inc p+p)
No software, or manuals.

Broken bits:
------------
The above machine WILL boot up. However the Joystic port (but not the
mouse port) is broken (on the keyboard) and the Internal Floppy Disk Drive
will not write to disc, or when it does, it has the tendancy to trash the
disk completely. Other than these 2 things it works fine.

Possible salvagable bits (or make me an offer)
----------------------------------------------
The above machine, if not sold in one piece, has these working bits, for
sale seperatly:

PSU (20 ukp inc p+p)
6 x 256k RAM chips (1.5 MB total, 10 ukp inc p+p for each 1/2 MB)
Keyboard (No joystic port remember, 20 ukp inc p+p)
TOS ROM 1.6 (make me an offer)

Anything else???? I'm not sure what else can be ripped out.

Yours in Atari,

Ray.

Is there anyone out there with an internet account that are not running a web page, I think nearly all internet providors supply you with web space, But you probably arn't using it because you have nothing to put there,

I am looking for such an empty unused site, for

ST+ DISKMAGAZINE

To put the above diskmag on line, it has been going for over a year now is released every month and is a FREEWARE publication, its content is mostly ATARI related but also contains SCI-FI sections and misc etc,NO smut, NO swearing, NO nastyness, a good clean ATARI diskmag that is probably best decribed as for your average user, theres a small Falcon section, but its not a power users publication IYKWIM, I dont run this diskmag, but am a contributor, the team that run it dont have net access,

You may want to take this up as a hobby and be the webmaster for this diskzine, or you may have the web page going spare and allow me to run the ST+ online from that page, either way I don't mind, but you taking the task on would be nice:)

** EXTRA ** If you want to take this task on and dont know HTML then I will teach you enough to get you on the right track :)

Any site anywhere in the world will do,

Theres nothing underhand about this, its a free publication looking for a permanent on line home and smeone to look after it :)

The folowing subjects, ATARI Pirated Software and Illegal TOS Images have appeared at a greater regularity than ever before in this newsgroup,
But the postings flaming these people is far outnumbering the requests,

Heres a warped thought,

Someone with plenty of free web space,Theres a lot of DEMON customers with 5 meg sat there doing nothing?, Make a

ATARI WAREZ and TOS IMAGE WEB PAGE

Have a welcome screen heavy on jpegs and mid files and all other manner of slow loading stiff,

Then onto a Heavily laden disclaimer about how its your own fault if you get done downloading from this site,

Then onto a really juicy menu , again plenty of BIG graphics, and a list of really top software titles,

On choosing a title you get more disclaimers and enter or wimp out options,

after maybe 15 heavy screens (hehehe can you see it coming!) you are presented with a screen asking you for the current password, of which of course there is no such thing and no software to be downloaded, but the fools will have spent a merry hour or so trying to get to it,
Or you could get it to loop back to the main menu with each page having so many options that they think they did it wrong by arriving back at the main menu so try again, can keep them occupied for days...

So anyone asking for anything in this group can be given the nod and the wink and sent to the ATARI WAREZ site...pass the site around the net etc, you could even move it to different web pages every couple of months just to keep them confused?

So who has an empty web site waiting to be used to take the P out of the pirates :)))

Anyone like this idea, anyone going to do it?, I have a scanner, I have access to lots of heavy graphics and i can do html if you want a hand,
Not from my page, I only get one meg and its in use :))

>disks.

It was also pretty darned important when I was trying to get Degas Elite up
and running, too.

Now, does anyone know how to get Deluxe Paint ST to run on Pacifist without
major crashes? <grin>

I'm also looking for a program that can split Cyberpaint animations into
individual frames (which I can then convert and take into a paint program on
another computer and turn into AVI/MPG or whatever).

Incidentally, Pacifist is a godsend. My STe was damaged in a move and I was
stuck with 150+ diskettes full of useless graphics and WordPerfect files. Now
I can convert everything into a more useable format which can be used on my
other systems.

--Jim Craig

P.S. If you want to see the sort of things that can be done on a 16 color
Atari ST screen, aim your web browser at
http://www.uoregon.edu/~jccraig/gallery.html
(best viewed with a frames capable browser)

# 5471. Upgrading STE Questions

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: Tim Pattison <tim@ravenhouse.demon.co.uk>
Message-ID: <I6RF5BAPXBMzEwj6@ravenhouse.demon.co.uk>
Source record: 125517
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

I've got an STE (upgraded to 4mb ram) which I haven't used seriously for some time and I want to start using it again for music sequencing. It's great as it is but here's what bugs me :

I've got loads of kit from old 386/486 PC's (including SCSI hard drives, SVGA monitors, internal power supplies etc) lying around doing nothing!

I'm sure other people must have asked about this but I'm new to this newsgroup and I just want to know if I can use any of it!

I don't want to go too deeply into the subject right now but has anyone tried this?

Are suitable controller circuit boards available for SCSi hard drives and SVGA monitors that would enable them to be used with the STE?

If I could build my internal SCSI hard drives into an external hard drive for the STE that would be great. If I could build the STE and hard drives and power supplies into a tower case and use a SVGA monitor, that would be even better! (It would also clear some space in my increasingly untidy office).

Then of course there is the question of external keyboards.

The list goes on... and on...

I'm not looking for complex technical replies at this stage, I just want to know if it is an idea worth pursuing. Any advice would be much appreciated.

Replies by email or newsgroup (either is fine)

# 5472. Anyone using Panther Card?

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <858768872_OASIS_@pcc-uky.campus.mci.net>
Source record: 125518

I was just curious as to whether or not anyone with an ST/STe has actually purchased and is using the Panther Video card. If so can you post some of the details for us? Like what VGA card you are using with it, how much did everything cost, what kind of difficulties you've had, and what kind of a setup you are using? (Model ST and monitor) Thanks in advance! :)

Everything has been sold. Thanks to everyone who responded.

# 5474. Re: MagiC hate page: ASH's "antwort"

Newsgroup: comp.sys.atari.st
Date: 1997-03-19 00:00:00 UTC
From: aclauss@rbg.informatik.th-darmstadt.de
Message-ID: <5gp93f$1h1t@rs18.hrz.th-darmstadt.de>
Source record: 125520

In article <5gof7i$qij@m1.cs.man.ac.uk>,
jacquesa@cs.man.ac.uk (Anthony Jacques) writes:
>>Like MagiC. But you can do AES-calls within an interrupt and things like that
>>with MagiC which is impossible to do with TOS.
>
> Hmm... that sounds scary... what if a program doing this is run on MultiTOS?

I think, Goetz means something different. I'll explain it with an example:

There're two programs running in parallel.

- Program A does the following system calls:
* fopen (opens a file)
* fread (reads some data out of this file)
* fclose (closes the file)
- Program B renders a picture (like POV-Ray)

In Mint/MultiTOS the following would happen:

Program A is running, it calls fopen().
Inside fopen() Mint tells the hardware to read some blocks of the harddisk
to find the file in the directory. The hardware/harddisk needs some time to
do this, so Mint/GemDOS waits until the data is available. Then the file
is "opened" and fopen() returnes.

A timer interrupt tells Mint, that it is time to switch to another process.
Program A is stopped and program B is now running.

Program B renders some parts of the image.

After another timer interrupt, Mint switches to program A again.

Program A calls fread. Mint/GEMDOS tells the hardware to read some
data from the file and waits until all the data is available.

and so on...

Now the situation under MagiC:

Program A is running, it calls fopen().
Inside fopen() MagiC tells the hardware to read some blocks of the harddisk
to find the file in the directory. The hardware/harddisk needs some time to
do this. Unlike Mint, MagiC switches to another process which can use the
processor while the other process must wait.

This means program B is running now (program A is blocked inside the fopen
call).

Some time later, the hardware/harddisk has read all data (interrupt). MagiC now blocks program B and finishes the fopen call of program A.

Program A calls fread. MagiC tells the hardware/harddisk to read the data and switches to another process (program B).

Program B is running again until another interrupt signals that the harddisk transfer is finished.

and so on.

As you can see Mint wastes a lot of processor time because it is not reentrant. Only one process could be inside a system call at the same time. So while one process is blocked because it waits for data being read by harddisk/disk/modem etc. all other processes are blocked too.

In MagiC this is not the case. In fact any number of processes could be for example inside a fread call at the same time and none of the other programs that don't want to read/write data to/from disk are blocked and have to wait.

This is one reason why MagiC is much faster than MultiTOS. Another reason is that the MagiC VDI and AES are faster than the Atari VDI and AES.

It is possible, that MagiC needs more time for formatting a disk (for example) than plain TOS because it does task switching while formatting. And this overhead (a short delay) could be the reason that the floppy has to wait another rotation of the disk to begin the formatting of the next track. But you must not wait until the whole disk is formatted, it is possible to work with other programs while formatting. Under Mint this is nearly impossible.

I hope my explanation is correct.

Regards,
Alexander

Why do you go around pretending to have just discovered the software you wrote yourself (see header). Nice to see that you found out you were a programmer by reading the newsgroups !

A nice and honest announcement is always better that the corny old 'I just found this, Check it out' type advertisement.

A bit of topic, but how do you do that (send URLs to CAB)? is it via a VA_START message (in which case, is the 'filename' the URL?) or is it some new message?

I would like to add this feature to my own software... (and does it support a "mailto:" address?)

Hi Daniel!

Nope, I got no reply from that address. Since then (today actually!) I have found a new E-Mail address...its:

info@orres.com

I'm going to try that one just as soon as I get this message off! <smile>

I also discovered a Web page so how 'bout some of our fellow Atarians that can use CAB/STik/SLIP visiting there and letting us know if they have any info posted about the Atari version of their Internet software, hmm? :^)

Its... WWW:http://www.orres.com/~orres

Well, I hope thats correct. Let us know, please! Also, if anybody gets any new info via E-Mail reply then please post it here and let us know! :)

This is in the FAQ. AFAIK, IDE drives are a no go. However your SCSIs are attachable with the help of a SCSI adaptor (ICD Link series or any other...) and a HD Driver program. AHDI is Atari's driver, not the best one though, and is on any good atari FTP site. ICD Link is shipped with some driver software I think. The original hard drive port was for Atari Megafile drives only and is virtually useless nowadays.

If you have a PC not too far from the ST, you can also use Ghostlink which allows an ST to read the PC's drives. It can be found on the umich ftp.

>Next could some one please post a few addresses of supplier's that have mail

Intriguing. What are the problems you are having ? Is it actually an ST, STF, STFM or an STE ? What TOS version is it running. Maybe you could run sysinfo (available at umich ftp site), to find that out.

>Any and all pointer's will be appreciated please post any info to the group
>and if there are any people out there that would like to know more about the

> collector
>may be interested in the facts.

>

What with the request for a blitter and a TOS change, if I were you I'd rather find a second hand stock STE (they go for next to nothing these days and had TOS 1.62 and blitter, plus various other stuff) or upgrade to a Mega ST/TT/Falcon. A used STE will probably be cheaper than a blitter+TOS upgrade, but the others will take your SCSI drive with no problem.

The 'STx 1040' (is it really marked like that on the case ?) being a proto you might be better off keeping it as such (and not modify it too much). It's probably not worth much, depending on the actual prototype status it has (probably more of a pre-production unit, as it seems to have got mixed up with production stuff), but it is cool to own one.

The thing in the path header is used for cancel bots, so servers that do not
want to honour them can just drop them with a !site in their newsfeeds file.
I've never heard it suggested that humans should put them in their cancels,
though I suppose it does make sense for spam.

# 5492. TOS Copyright & More (Quark angle)

Newsgroup: comp.sys.atari.st
Date: 1997-03-20 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.032097.181228.79@wxs1-16.worldaccess.nl>
Source record: 125388

The guy with the quarks is right. I once made a program that calculated the amount of different screens on an Atari ST monochrome screen. If memory serves me right, the number is about 75000 digits long. This is one huge whopping number, and it boggles the mind to such extent that, whatever you say and do, it cannot be coped with rationally.
Even if every quark were in fact a tiny universe with as many atoms as we now claim the universe itself has, and you put all those quarks together, there would not be enough to comprehend the enormity of the 75000-digit number. I think, in fact, that the total amount of atoms in the universe is something like 2 to the power of 20. This hypothetical amount of quarks might represent a number that is a couple of hundred digits long, possible even one thousand digits long. Still...that is a long way from 75000 digits long!
Interesting discussion, this one.

By the way, when considering the legality of copying TOS... OK, Atari is no more. Or, at any rate, they are not selling any Atari gear anymore. All TOS ROMs around have already been bought off Atari. Atari, and this is my point here, will not lose a single cent out of TOS ROM piracy. Third-party producers have licensed TOS, and they are supplying their machines (Medusa, C-Lab Falcon, whatever) with TOS fitted. The point being, NO SINGLE PERSON WILL EVER NEED TO BUY A SEPARATE TOS VERSION, EVER. Everybody already has one. It's like owning a pirate tape of a CD and the CD itself. I think that, if you own a TOS version (in your Atari), sure, you could go ahead and have as many (pirate or legal) TOS versions on your PC as well.
It would be slightly different for people who only have a PC with ST emulator, and no Atari system. This is not intended as flame bait. I am quite willing to be proven wrong, but these are just a few of my thoughts on the matter.
By the way, I have legal TOS ROMs that I got with my GEMulator. The reason why I react to this whole 'TOS theft' matter with some vehemence is that people got pissed off over the fact that Robert Goodwin and me have supplied a URL for people to get TOS versions off the Internet for use with an ST emulator. There really is no need to get pissed off about this, I think.

# 5493. Atari 286/30 does not boot from HD.

Newsgroup: comp.sys.atari.st
Date: 1997-03-20 00:00:00 UTC
From: Peter de Jong <padj@euronet.nl>
Message-ID: <01bc3566$116e2a20$0100007f@deskpro-5133>
Source record: 125389

From: Peter de Jong padj@euronet.nl

I can use some help from Atari users/specialists.

Atari 286/30
HD Seagate st 225 20 MB

This Atari computer does not boot from it's HD. It keeps on giving
" HDD Controller Failure" during the boot process.

My method:
I selected IBM disk no 2 in the BIOS.
Started ms-dos 6.22 in A:
Removed the existing partition on the HD,
Installed MS-DOS on the HD,
MS-DOS first formatted the disk to 31? MB
MS-DOS moved the system files to the HD and
the MS-DOS files to c:\dos

But the bios still reports a "HDD Controller Failure" .
and the computer only boots from A:
After booting from A: the HDD is accessable but scandisk reports
a unrevorable fat errors.
I can install software on the HD.

Questions:

Is the above described possible when the MFM controller is
defect.
What can i do to have this PC boot from it's HD ?

Thanks in advance,

Peter.

Quite right, the number of combinations for a chunk of code a couple of K long runs into the billions if my maths is correct. To cover every combination even at this tiny size is going to take a VERY long time and a lot of disk space.

# 5495. ATARI 286/30 does not boot from HD st225.

Newsgroup: comp.sys.atari.st
Date: 1997-03-20 00:00:00 UTC
From: Peter de Jong <padj@euronet.nl>
Message-ID: <01bc3566$bffd0de0$861a86c2@deskpro-5133>
Source record: 125391

From: Peter de Jong padj@euronet.nl

I can use some help from Atari users/specialists.

Atari 286/30
HD Seagate st 225 20 MB

This Atari computer does not boot from it's HD. It keeps on giving
" HDD Controller Failure" during the boot process.

My method:
I selected IBM disk no 2 in the BIOS.
Started ms-dos 6.22 in A:
Removed the existing partition on the HD,
Installed MS-DOS on the HD,
MS-DOS first formatted the disk to 31? MB
MS-DOS moved the system files to the HD and
the MS-DOS files to c:\dos

But the bios still reports a "HDD Controller Failure" .
and the computer only boots from A:
After booting from A: the HDD is accessable but scandisk reports
a unrevorable fat errors.
I can install software on the HD.

Questions:

Is the above described possible when the MFM controller is
defect.
What can i do to have this PC boot from it's HD ?

Thanks in advance,

Peter.

your missing the point :), whats needed is on on line presence,
simmilar to atariphille and st apps and atari times etc, all have
diskzines on line where you can read or download or enter feedback or
articles etc, cant be done from an ftp site, we want to PRESENT the
diskzine to the atari public, sort of a advertisment to attract
readers, well thats the idea,

and amazingly after a tip off from Andrew Robertson (thanks) i got a
free page today,

watch this space :)

# 5497. Virtual Web 2!

Newsgroup: comp.sys.atari.st
Date: 1997-03-20 00:00:00 UTC
From: cgood@cix.compulink.co.uk
Message-ID: <E7Cx40.42v@cix.compulink.co.uk>
Source record: 125393

Hi All Atarians,

Yes it's here! The Virtual Web returns! VW2 should hopefully be at the
April Atari shows if I can get somebody to run it (offers please -
preferably somebody with a Falcon and Zip drive)?

As before all I need is for everyone to send me their Websites.
Either:-

Binmail on CIX
Email (UUecoded) to CIX address
Snail mail on disk (email me first and I'll send address)

To arrive by 18th April please.

If you sent it to me last time and you've only updated it a bit since then
please only send the new bits rather than the whole lot again.

In the meantime I'll be scanning the Web for as much Atari related stuff I
can find. Any useful URL's or info gratefully received (Harry?).

TIA:)

# 5498. REQ ***Help with PacifiST and Gemulator***

Newsgroup: comp.sys.atari.st
Date: 1997-03-20 00:00:00 UTC
From: hacer@ukonline.co.uk
Message-ID: <33319ced.3996201@news.ukonline.co.uk>
Source record: 125394

I have games and programs on Atari disks and neither Gemulator or PacifiST can read them. I have used imgbuild for Pacifist and it returns errors on atari disks when it is converting them. My other problem with Gemulator is similar, it can't read atari disks when in atari disk mode. How am I supposed to install programs? I take it that it's the extended formatting that software companies use for copy protection that is causing the problem.
Does anyone know of a program that will read atari disks? so that I can copy them onto my hard drive.

thanks in advance

thefunkster

## 5499. Anyone had these problems with "Thing" desktop?

Newsgroup: comp.sys.atari.st
Date: 1997-03-20 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3331a8261066a12@sn.no>
Source record: 125395

Has anyone experienced these two problems with the "Thing" versin 1.09
alternative desktop before?

-When opening up a folder with many files it takes a pretty long time for
the window to be fully updated. For some reason it seems like the system
has to scan all files or something.
Comparing it to TOS (I use 2.06) where opening any directory window is
instantaneous, "Thing" is extremely slow. I haven't found anything I can do
to remedy the situation other than to wait...

-Sometimes the system locks up while copying/moving files on the desktop!
The "progress bar" shows up, and the "busy bee" mouse pointer is there, but
instead of returning to the desktop after the job is done it just keeps on
being busy forever...
This has even happened before all files have been moved.. A pretty serious
problem, so I try to use "Selectric" (the file selector) instead for jobs
like this where I have no problems like this.

My system is an STe with TOS 2.06, 4 MBytes RAM and a SCSI harddisk
connected via "The Link II" from ICD. The harddisk driver is ICD's own,
version 6.5.5.

I am using an HP 'Coyote' drive, which I could not format with ICD
Pro, either. What I did was partition it with Diamond Edge, and did
the 'Markbad' with ICD Pro. It has been rock-steady for many months
now - I don't re-format or anything else. Just read and write.

>
> In the case of a TOS ROM this big number would
> be over 190k long!

I'm not a legal expert, but I do know that use of trademarks is context dependent. It must be analogous for things like this. For example, the term Apple cannot be used for any computer related names. The word Apple for computers is reserved, but you are free to use it for, say, the name of a new car. Similarly for the 190K long number. You cannot use it as code. I'm unaware of any other sensible use of it.

As with most laws, when you get behind the legalese it is just common sense - and conscience. In this case, you are taking away the ability for a purchaser of the TOS copyright to have made money.

In my past, I have bent the spirit of the law and used small portions of software that I did not pay for. Without exception, I can say that the effort I made to jury-rig something illegal was not worth the benefit I would have gained by doing it legally.

As for my above mentioned actions, at least I admit my moral weakness and do not try to dress it up by justifications.

Better to get a full 9-pin null-modem cable; there's no handshaking possible
with a 3-wire cable. Alos, in my experience, you must restart in DOS mode
on the PC if you are running Win95, else PCSLAVE.EXE fails to properly init
the serial port.

If all else fails, go to my ftp site and get
ftp://ftp.teleport.com/users/atari/pc_st.zip so you can use sneakernet (if
you have a bunch of disk formatted w/o the M$-DOS idiot bytes).

>Does anyone now of a way to use my STE with a Pc SVGA Monitor.

For high-rez, no problem. For low- and medium-rez, unless you ahve a
wide-band multisync that can handle 15.75 kHz horizontal sync, no.

See ftp://ftp.teleport.com/users/atari/multsync.faq for details of how to
make the adapter, and which mulitsync monitors will work in all rezzes.

>I would also like to connect ST to PC and use the PC hard drive.

That's relatively easy. Use Ghostlink. It will be slow, but the PC has
lots of storage space - and the ST will be able to read the CD-ROM drive (if
your PC has one) as well.

It emulated a Mac+ with a larger screen and faster drive. On my 4MB Atari I get
a 4MB Mac unless I tell SpectreGCR that I am using the Atari SLM804 laser printer,
in which cae I have a 2.9MB Mac. Sorry - I've used those old Macs, and Spectre's
emulation was quite _fast_! Not posible to run System7? maybe. there is a software
product(OptiMEM's RAM Charger) being sold that states it will allow 4MB limited
Macs too run System 7, but I've not tested it with SpectreGCR.

> Now, besides the fact that pratically no modern Mac software can run on such
> an emulator because of the ram limitations, the old System 6 OS, the long gone

My dad is selling various MIDI/studio/audio items:

DH100 Casio MIDI wind controllers (2) self-contained, battery-
powered, fairly good key action, look like baby saxes.
Rewired to finger like Irish tine whistle or bagpipes, but
*easily* swapped back to recorder/sax type fingering. (Two
wires crossed back--will do.) $75.00/w case $50 w/o.

TX81Z 4 op FM tone mod/wind mod. $175

TG55 SY rack version with bonus sound card $300

S612 Akai basic sampler with quickdisk floppy drive. Also have
Atari Soundfiler sample editing software. $150

244 Tascam 4 track cassette recorder. $250

PSM8 Very nice 8 channel mixer for MIDI etc., sends, recs,
quiet, compact, mic/line ins faders. $200

Micro Gate Alesis noise gate. $40.00

Micro Enhancer Alesis "BBE"ish brightener. $40

GE 74 Kenwood DJish stereo graphic EQ w/reverb/mic mix. $100

575A Flanger, DOD pedal-type mono. $30

MN50 Fostex mini mono compressor/mixer 4 line, 1 mic. $30

M268 Sure balanced mono mixer w/phantom power hi-lo imp 4 mics 1
aux. $75

AMP Davis, guitar/keys, (this one's been out of the studio--a
lot) one 15" and about 100 watts/reverb, 2 channels, pots
not so clean at quiet levels anymore. $100

Atari ST Software:

Soundfiler, S612 sample editing. $50
Also have many disks of home-brewed samples included.

Includes boxes (for most) and manuals. All excellent condition,
home studio, very limited use only. Low actual hours.

If you just want to switch tasks then there is no problem. I guess you
want to do this while compiling though, in which case running it from
a vt52 command shell should work.

I'm working on the assumption here that perhaps Lattice has locked out
the screen manager during compilation, rather than running in
supervisor state which although possible, wouldn't make any sense.

oo-er grumpy! - then why mention Lattice? ;-)

MWC is not even ansi, so it cannot begin to compare with Lattice or
PureC. The intention of my posting was to get you to explain why
Lattice cannot multitask - it can.

It does not make sense to multitask in supervisor state, so if Lattice
cannot multitask then neither can any process which uses the operating
system. So in effect you are saying MagiC cannot multitask!

Sorry, took a little time... ;-)

AFAIK, current CAB-versions completely ignore the entries in the dialog box. Do whatever you want. It doesn't hurt however to enter them into CAB.

Ciao

Guido

Yep... I'm using a shell account using a text browser. You can somehow make the server look very slow while it loads a huge text file, which has very little in it. Force the user to wait a bit. Failing that, open it in Japan somewhere.

The kicker is that it took me an hour to download a file that was a little over a meg in length. Slow site.

Or, just make many useless links forcing the user to go all over the place, when there's none really. A most excellent April Fool's joke. Should have seen the one I pulled on a BBS I ran before.

If possible, have it autoload random pages, keeping the user from making any keystrokes, rather, they watch a lot of links go by.

Ye gods... I could go on and on. You get the idea.

# 5528. XaAES Problem Question

Newsgroup: comp.sys.atari.st
Date: 1997-03-20 00:00:00 UTC
From: jdaddin9@airmail.net
Message-ID: <5gqk0r$ti5@library.airnews.net>
Source record: 125459

I have a 14meg Falcon using MiNT v1.12.5 . The only major auto-app I have running is NVDI 4. I recently downloaded XaAES compiled for the 030 processor and Thing 0.59 . When I set up XaAES as it says, it will boot up and run through all of my auto programs. XaAES will then run and after a few seconds it will crash with the following error message:

pid 1(XAAES):BUS ERROR: USER PC=1CF040 (basepage=1C2010, text=1C2110, data=) exit code:2560

Right after this, MiNT crashes and the system must be rebooted. I left the author a message a few days ago, but he has not yet responded. Does anyone have any ideas? Thanks!

-Jared

>NG readers be able to understand your real e-mail address. If you put your
>e-mail address anywhere in the header OR the text message the bulkmailers
>will find it ;)

According to the latest info available in news.admin.net-abuse.misc,
only the headers are being grepped - and I suspect that only "From:" and
"Reply-to:" are targeted. I'll be doing a little spam-baiting Real Soon
Now<tm> to find out for sure...

I do know that CyberSpammo (aka "Cyber Promotions") is bragging about
having a spiderbot that dredges mailto: headers from Web pages. I sure
hope it hits my page soon, I have a REAL bug surprise waiting for any
'bot that harvests addresses from http://www.teleport.com/~atari <EVIL
GRIN>.

>I was thinking of getting "nasty" with the most obnoxious spammers, but
>that's NOT in my nature nor do I want to stoop to their level...

As long as it's legal, do the Nike thing - "just do it." The situation
with spam is akin to the situation with other forms of anti-social
behavior. Robert A. Heinlein expressed it best - "an armed society is a
polite society." In simple terms (in case sinclap is reading this), a
punk is far less likely to raise a ruckus or do anything annoying if he
thinks that everyone around him (other than the members of his pack) are
ready to do something sudden and violent that will stop him from
annoying them. If everyone is capable of killing spam more-or-less at
the source, the spamming WILL stop.

>However, I don't think Government regulations are the answer either. I

They aren't a good answer, but it's still illegal to impale spammers in
the town square.

>know there are literally millions of people fed up with spamming. So a
>little creative programming may be the answer; both legal and effective.

How much money do you need to get started? <G>

>As my programming experience is limited to Fortran IV, I think a few "Night
>Class Courses" are inorder for me :) Most bulkmailers use similar prgs and

>Windoze, so I'm sure there are cracks in the software that can be exploited.

I can probably obtain copies of some of them if you're interested, or
you can download "demo" versions.

>Wouldn't it be ironic if an Atarian developed this software? "Nasty" or
>otherwise; It would be a BIG market...

It /is/ a big market. Maybe the only real way to make big money on the
Internet.

>Thanks to ALL for their posts on this subject.

Even if I did annoy Bruno?

The key word there is "reliable" - out at Intel, the tape drives are ALL
SCSI - the floppy-controller-style are NOT considered reliable.

Hi Harry and All,

Do yourself a favor and get an EZ Drive if available :) The "Price is Right"
and setup is a breeze. You'll thank me later. The only reservations I have
were a post from "Kevin" who used them as a data backup for video files.
I've never had this problem. As always "Caveat Emptor!"

Well, In the UK someone makes a 16meg board that installs *very* easy. I
know as I have one. A 16meg 72pin simm just plugs in with just a jumper
to move from 4meg to 16meg. That's it. I suggest that you give away or
sell the 4meg chips and go this way :) This board fits easily in a standard
Falcon case with no mods. No way to goof this up!

Looking at your two posts (the other one about emulating a mac on an Atari), it seems that you don't know much about computers, which is not so surprising nowadays when they are all selling 'multimedia systems', not computers.

For a program to run on a particular computer, it has to be written for that computer. Macs can only run Mac software. PCs run only PC software. Ataris run Atari software.

The only way around this is emulation. To emulate computer A on computer B, you need a program (an emulator) that runs on/is written for computer B. This program basically translates each program instruction written for A so that B can execute it. This is a very time, memory, speed and resource consuming process. You need a very powerful PowerMac to emulate a 5 year old 386 PC for example .A modern day Pentium can only just emulate a 1985 Atari ST. You certainly can't ask a low resource 80's era computer like the ST to emulate a modern 90's PowerMac. The opposite though is theoretically possible, provided of course you have an emulator program (Note: there is no ST emulator for Mac at this time).

Your post about the Atari emulating a mac: First of all, the mac emulator (Spectre GR) you are talking about was back around 1987 or 88. It could only possibly emulate a very old 1985 macintosh, and even then, the emulation was quite slow. You needed 4Mb of RAM to emulate a 1Mb Mac (which was the standard in those days). A modern day Pentium can only just emulate a 1985 Atari ST.

Now, besides the fact that pratically no modern Mac software can run on such an emulator because of the ram limitations, the old System 6 OS, the long gone Spectre GR software, the Atari cannot rune with more that 4Mb. That's a hardware limit that can only be broken with serious and expensive hardware modifications.

Back to this post, Netscape Navigator exists in PC and Mac (and various Unix) flavours. There is no Atari version of Netscape, and I can't imagine Netscape Corporation investing today in porting a Netscape to the Atari platform.

There are however a few Atari web browsers around, like the STiK/CAB package or WebSpace.

You'll probably find a few useful links at Hallvart's launchpad page:

The ST isn't 8 bit either. He was referring to the "old" Atari 800
(XE/XM/whatever) series of 8 bit computers.
But you are right, the ST isn't old. 12 years is nothing compared to the
time UNIX (not actually a system but an OS) has been around. And what to
think about PC's... They've been around for 17 years.

|files to an empty folder and place them back in the auto folder (in
|desired order) method, but this doesn't work. (it goes back to my
|default, which is by name)

Actually, it probably did. If you have TOS 2 or above, there is a 'no sort' option in the view menu. I don't know whether NeoDesk has a 'no sort' option. UIS does. But a TOS 1.xx desktop does not; so what you will see is the sort by... (whatever). Auto folder programs run in the order that they are copied into the folder.

(Not to confuse the issue, but... I have occasionally copied in a .prg to the auto folder, and then gone to re-order the folder, and found that the new .prg was /not/ last, as I expected it would be. Anybody know what voodoo /this/ is?)

I have used both 'AutoSort', by Eugene Sothan, and 'AutoOrg' (much faster!) by the CodeHeads. Both of these work fine, but you need to have some way to display them 'unsorted' to know that they did. Superboot (bootmanager) has an option for this.

|the HD partition is not copy protected, but the boot
|and root sectors are.

How does one do this? Tell me more.

Change the display in windows to plain text - Thing has a problem
similar to Win95 when displaying icons - it has to read the whole folder
adn then compare each filename against the icon resource.

>-Sometimes the system locks up while copying/moving files on the desktop!

Get Kobold and use it for file copies and moves; I haven't had that
problem, but Kobold should solve it anyhow. Oh, and be sure that you
have NOT enabled write caching in your hard disk drivers (or with
WBDAEMON or whatever it is). It seems to speed things up, but unless
you make backups daily, sooner or later, you will lose critical files
because of the write cache not being flushed when the system crashes.

Warning! Long (mostly useless) post:

MWEBER@LI.NET whined and sniveled thusly:

|You guys are getting a little out of hand... First of all I own an
|Atari ST. The hard drive is bad so I need to get the images.

1) Can you spell 'non sequitur'?
2) Can you tell me the difference between 'need' and 'want'?

|Second of all we
|are talking about the "ST" platform! Which doesn't exist anymore.

Really?! What is this in front of me - chopped liver?

|No support, barely any new software etc.

I can't keep up with the new software being released for this
platform. Maybe what you need is an increased ability and willingness
to ***pay*** for what you get.

|I can't even find a dealer near me that will fix my drive!

Dear me, no dealer nearby to fix his drive. Whatever shall we do?
Take up a collection so that he can pay shipping? Open a convenient
shop for him? I don't think so, Mike.

|Thirdly, do you really think JTS cares anymore?
|They have 1000's of unsold Jagars stuffed in a warehouse which they
|can't get rid of!!

Non sequitur. And companies don't 'care'. Individuals do.

This discussion has *nothing* to do with whether or not JTS will
invoke the law. Or at least it shouldn't. It has everything to do
with the sensibilities of the people who hang out here. As someone
who hangs out here, I vote for your absence.

|And trying to get people kicked off internet access
|providers is ridiculas! Enough of these stupid accusations.

Can you spell drivel?

Rich has asked before whether the denizens of this newsgroup approve
of his efforts to rid us of spammers and other pests. I did not
respond, as plenty of others articulated my thoughts pretty closely.
As I recall, the sentiment ran about 99% to 'show them the gate', as
forcefully as necessary to accomplish the job of pest control. I
agreed. I still do. The absence of Roger the Cabin Boy and The

Janitor has improved the newsgroup immeasurably. Yours would help.
And getting that other dam* pirate out of here would be a wonderful
thing, too.

|JTS has better things to do with their time going after pirates of
|an absolute ST platform.

Well, I don't have to ask whether you can spell 'obsolete', do I?

|Take a good look at the 8bit platform! There is all kinds
|of software out there on the net and no one gives a s*it. And it's
|keeping the platform alive. If you want to keep interest in the ST
|platform I suggest you do the same.

Generating a dichotomy (2-valued logic) to describe the health of a
computer platform is probably the definition of 'clueless'. Can you
spell /that/?

|I think getting the permission to
|post all those great old ST games is a great idea!! I miss or have
|orgotten all those great games I played countless hours
^^^^^^^^^ ^^^^^

I'll bet! Did you pay for any of them?

|playing on the
|ST! Make them public or at least make an ST action /adventure pack
|for the IBM and sell it to the public!

I don't suppose that you want to do any of the work to make this
possible, do you?....

I thought not. You remind me of the Little Red Hen's 'friends'.

|I myself was a true hardcore Atari ST
|fan but times change. Then again that is my opinion! So stop
|flaming me!

I don't think so, Mike.

|BTW thanks for all the replies from all you generous people out
|there...

## 5548. STFax

Newsgroup: comp.sys.atari.st
Date: 1997-03-21 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <858921916@acpu.com>
Source record: 125279

Hello, Joseph. You said:

|I am looking for peopel who use ST Fax. I have the latest version
|2.5, running it on a mega STe 4 off of a hard drive, using a Supra
|144LC modem.

Well, I run v2.5 on a TT, serial port 2, and used a Best Data 14.4
before I got this Supra 288.

I did have some problems sending faxes after running STalker; the
send would hang after '15%' sent. I had already installed the STalker
exit script. I no longer have this problem; at least I haven't seen
it for a while. It seems to have healed itself.

|Sometimes while trying to fax people, I have problems after the
|first page. The page will send just fine, but at the end of the
|page, the software waits for a signal to tell it o go on to the
|next page.
|Sometimes, ST Fax times out and hangs up. I know that these other
|machines work, because I have to use a friends fax to send to
|document.

STFax is waiting for 'page acknowledge' from the other machine. It
sounds like it isn't getting it. Perhaps phone line glitches? This
problem might be pretty hard to track down. Have you tried it from a
'clean' system?

|If anyone wouldn't mind exchanging a few pieces of e-mail to maybe
|help
|me out, I'd really apprciate it.

I wouldn't mind a bit. But I would suggest that you try to get ahold
of Charles Smeton; he is bound to know more about it than me. IIRC,
he is c.smeton@genie.com.

CAB accepts filenames, URLs, and mailto: as a command line, and via
VA_START. I use both URL and mailto: in the 'About' window in CoSTa2.
So, to pass it http://www.fred.com/ simply call it with that in the command
line (this is only really useful if already online).

Hope this helps,

Gary

Out of the ether, the following was mentioned by Steve...:

m>> What kind of hardware? Tape backup? Zip? Sequest removable?
SS> Ive got a Hewlet Packard 2Gig DAT Drive.
I've got an Archive 4Gb DAT drive. I've also used a Wangtek QIC150/250 and an Exabyte 2500 Video8 streamer on both my Falcon and TT.

SS> I use a prg called Gemar
I've tried using Gemar (Diamond Back 3 wouldn't recognise the Exabyte) but it bombs out on me if I try to back up to much (currently backing up about 2Gb on the Archive DAT). DB3 works providing I run it under TOS otherwise it bombs under Magic when the backup has finished.

# 5551. Q: SCSI ZIP on Mega 2 ST .. how?

Newsgroup: comp.sys.atari.st
Date: 1997-03-21 00:00:00 UTC
From: please@no.spam.mail.here.mettav
Message-ID: <32049_please@no.spam.mail.here.mettav>
Source record: 125282

Yo! Derryck Dude!

Whilst under caution Derryck said to Officer Steve :~)

DC> <weeeooooooww>

Oy!, almost hit me, maniac!!.

n>>>>> use my new SCSI ZIP on my Atari Mega2 ST. What do I need and where

SS>>>> You'l also need something like a LINK II plugged between it and

DC>>> Also some means of powering the Link, if there isn't another device

SS>> I personally think thats a dumb ass design cock up, its hardly a stand
SS>> alone device as it stands, and isnt designed to be chained with other
SS>> devices is it. Can the mechanism be removed from the case and put in
SS>> another case.??

DC> Dumbass, cheapo design.

Way to go, ive got you swearing at last.

DC> Putting it into another case wouldn't do any good as you'd still need to
DC> mod the PCB to feed the 5V if I have the right end of the stick.

I was thinking more about putting it in a tower say with your HD and CD.

Regards from STEve & his nice warm cosey PAK'd MegaSTE.

** Mega STE + PAK 030 @40Mhz, 68882 FPU, 4 Meg ST, 16 Meg TT RAM **
-= Help I'm modeming... And I can't hang up!.

# 5552. Re: "Diamond Edge" upgrade patch?

Newsgroup: comp.sys.atari.st
Date: 1997-03-21 00:00:00 UTC
From: Dave Gostl <dbg01@gnofn.org>
Message-ID: <Pine.GSO.3.95.970321025024.28488A-100000@sparkie.gnofn.org>
Source record: 125283

On 20 Mar 1997, Hallvard Tangeraas wrote:

->I recently bought a used copy of "Diamond Edge" version 2.01.
->The previous owner mentioned that there's an upgrade patch available which
->will bring it up to version 2.04.

Are you sure about the version number? A patch to v1.10 was the latest I
ever saw.

->Does anyone know where I can get hold of it?

archive.umich.edu/atari/Diskutils/
de100102.lzh 119 Diamond Edge upgrader, from 1.00 to 1.02
de102103.lzh 120 Diamond Edge upgrader, from 1.02 to 1.03
d1034_10.lzh 237 Diamond Edge upgrader, from 1.03 or 1.04 to 1.10

I did the upgrade to v1.10.

Dave

# 5553. Where to get LINK96: e-mail addresses

Newsgroup: comp.sys.atari.st
Date: 1997-03-21 00:00:00 UTC
From: Uwe Seimet <us@ooc.de>
Message-ID: <33325A2B.1B9C@ooc.de>
Source record: 125284

Those having questions concerning the LINK96 SCSI adapter for ST and STE
should use a new e-mail address:

u.biletzke@cww.de

This is the address of Uwe Biletzke. Uwe Biletzke and Norbert Wieczorek
work together concerning LINK96 development. Uwe told me that his e-mail
address is checked more often for new a-mail than Norberts address
norwiecz@aol.com.

# 5554. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-03-21 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5gtstn$i24$1@linda.teleport.com>
Source record: 125285
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I

will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

## 5555. Nemesis

Newsgroup: comp.sys.atari.st
Date: 1997-03-21 00:00:00 UTC
From: greeny@spirit.demon.co.uk
Message-ID: <858902526_OASIS_@spirit.demon.co.uk>

Has anyone got a Nemesis Falcon accelerator installed yet?
Before I order mine I was wondering how compatible these boards are.
Blow-up FX seems to have problems ATM with some motherboards and the
scorpions seem to know the Falcon inside out but it'd be nice to know
what would and wouldn't run. I wont go the whole hog with the
afterburner yet until I see what an 030 with 14meg and videlity can
do.

Many thanks for any advice

>machine's.

Drives use ACSI which is very close to SCSI. You need an adaptor such
as the Link to make it fully SCSI-1. IDE is possible but very hard to
locate boards.

>Next could some one please post a few addresses of supplier's that
>have mail order any where in the world for the purchase of TOS ROM's
>they have not been available in my part of the world since 1991.

You might prefer looking at some of the alternative operating systems,
such as Geneva or MagiC.

>Another request is for an EPSON LQ400 Printer Driver I only have the
>daisy wheel driver that came with First Word and it only prints on
>every second page when I,m using tractor feed.

Can't really help here, except to say that it is possible to build
your own 1stWord printer driver if the printer manual is good enough.

>I use my Atari for
>Autorouting Work and PCB design and printing the schematic's to ectch

>I would like to purchase a blitter chip as well if any one can point
>me in the right direction.

I wouldn't bother doing this myself. NVDI is a software screen
accelerator and font scaling system. You'll get better results from
that and probably get a suitable printer driver as well - though check
first.

>Another need is for shareware or other Modem Drivers / Comms Software
>capable of speeds higher than 9600 once again nothing can be found in
>my part of the world And I have spent many hours on the German FTP
>sites and fu net but with no luck.

You need HSMODEM to fix the serial bugs in the operating system. You can drive a standard serial port at 19200, more if you want to buy a few bits and do some soldering.

>I still use the slow old Atari's

>and I will post all details. Some collector may be interested in the
>facts.

If someone can verify that the software you want to run will work under Geneva or MagiC + NVDI then this is probably the best path to take, provided you upgrade to 4Mb ram.

Hey Eric...

Good to hear from you again, and I really hate to inform you of this, but
the ST is not an 8-bit machine!

I have, however, gotton that ol' 800 working well with the disks and
everything... so I'm looking to move some basic-type stuff onto the
floppies for that as well.

My question is this: Does an ST have an SIO interface to hook up 8-bit
peripherals? I'm getting an (Not old - middleaged) 1040ST in May.

Cool. You know what would be really neat would be to recompile the best
of the STOS games using these new techniques so they would run on all TOS
machines without having to make the end user recompile them. Then create
an FTP site that has all these old (and new ;-) games ready to download
and run.

Obviously, the best of these games come from STOSSER software anyway, but
it would brilliant to include the best of the rest as well.

Anyone second the motion?

>quite slow. You needed 4Mb of RAM to emulate a 1Mb Mac (which was the standard

Actually, with 4MB RAM you can get almost a full 4MB Mac under Spectre GCR.
And it's not slow - because the Mac and the Atari have the same CPU, no
emulation as such is required. For this reason, Spectre runs as fast as a
real Mac with a CPU equivalent to that in your Atari machine.

The real problem with the Spectre is its inability to use System 7, meaning
that modern Mac software can't be used with it. I heard a while ago that
Dave Small was still working on the Spectre, but I suspect that was just
some wishful thinking.

>Spectre GR software, the Atari cannot rune with more that 4Mb. That's a
>hardware limit that can only be broken with serious and expensive hardware
>modifications.

That's strange, my Atari machine (a TT030) has 8MB RAM in it currently and
can be upgraded to 64MB with a cheap board, or theoretically up to 4GB -
the biggest amount practically possible is 256MB, however, since there is
no RAM board available to take more than that.

It is true that the ST series is limited to 4MB without some special
modification, though.

meridian <meridian@141.1.29.40> wrote:
: Boy, I can say there are some real a$$holes on this newsgroup. Either some
: of you guys are just jealous of IBM users or you are a wanna be IBM user.
: There is no need to flame people in the newsgroup. Go take your compliants
: about piracy issues to some debate newsgroup or something.
: As for this newsgroup. This is a ST newsgroup dealing with ST topics,
: software, emulators,ect... Plus it is one of the only active ST
: newsgroup(s) around. Since the release of PACifist you will see alot of
: more activity here also...

Although I have no intention of continuing the arguments, the truth is that I am neither jealous of PC users, nor do I want to be one of them. However, my reason for replying is that copying TOS images is illegal, and the fact that the copyright holders of the item in question are not doing anything with said item does not nullify their copyright. TOS is copyrighted, and as such, copying it is piracy, just as certain as copying MagiC, Windows 95 or AT&T UNIX is illegal, carrying the same penalties. Some of the users here are coming across as erratic, but considering how many different platform users come here to harass Atari users, I'm not surprised by their vehemence. Besides, they're right.

Leslie

No ideas, but it's not just you. I would dearly love to see what the
MINT.CNF and so forth look like if anyone has XaAES working - I had it
running once upon a time, many versions ago, on a MegaSTe, but those
configs are gone and I haven't had it running on my Falcon yet. Here I
have all this RAM and can't multitask properly. %^(

As long as I'm moaning - does anyone know of a way to make GlueSTiK work
under MultiTOS? I get a bus error (think it was a bus error - the Falcon
is 17 miles from here) when I try to run MT and GS, but GS works fine
with oldGEM under FreeMiNT.

>of the STOS games using these new techniques so they would run on all TOS
>machines without having to make the end user recompile them. Then create
>an FTP site that has all these old (and new ;-) games ready to download

yep good idea, theres a lot of good software out there going to waste
because Falcon, TT and even tos 206 users couldnt run them at the
time, unfortunatly the new fixing tecnique <spello? is done as you
compile, so you would need the source to all that software :(
The good news now though is that anyone releasing anything in STOS
will be totally compatable with all OS versions (perleease dont
mention madusa and hades) and the Tempest 2000 type clone I have
started will work on STs, TTs, Falcons the lot with no messing :)

Hmm theers been plenty of response the the warez file site
idea...sneaky :)

And none to my plea for space to plonk ST+ Diskmagazine on line and
all info and backcopies info etc every month? ..hmmmm strange?

I have managed to get a space at geocities, well i got two web pages,
well my wife got one and i got one <ahem cough!>

I went there two days on the trot, theres loads of free web pages
going in the times square area, from around area 6000 upwards,

Coming soon, ST+ Dismagazine on the web :)

So, like Access but without the support for Access Basic code? SQL and the batch ability would still go a long way.

Many thanks for this brief description. It amazes me that no US or UK distributor has picked up on this product. It really would fill what I see as one of the biggest gaps in the TOS software library. I'm tempted to buy it, but I know the German user manual would cause me too much frustration.

Hi Folks,

My own fault - I should have fixed it, or at least backed it up a bit more regularly until I had.

Anyway, I just lost all my emails etc 'cos of rampant corruption on ye olde "internet" partition. So, if any of you are expecting a response from me then you'll have to remind me because anything after Jan 1997 has gone to that great void that only an msdos compatible file system could ever produce!

The terms, 'beer' and 'more beer' seem to posess an irresistable appeal - I just might investigate it further ...

I've just verified in the FAQ, it's nowhere said it's reserved for
cancel bots. And I can't see a reason why human cancellers should not do
it? In fact I think a human canceller should use a bot or at least a
script to help him write a cmsg. If he does it by hand, errors are
unavoidable one day or another.

It's because you have deleted a file before. In the directory the
entry of the deleted file is freed. When you copy/create another file
there, the new directory entry is created in the first free place, not at
the end after the last entry.

Real voodoo is how (single) TOS orders ACCessories in the leftmost
menu... =<:-)

Oh? You have read the cancel FAQ? Could I politly suggest you read it again? Sorry for the sarcastic questions, but you said false things in your previous article. And don't misunderstand my words, I was talking from the technical side.

>The spam level is increasing. If the average citizen doesn't do
>anything, within 3 months the ONLY thing on the 'net will be spam.

Spam is annoying, but if you give rockets and missiles to everyone you'll perhaps get more annoyed. And perhaps everybody also, when they will see the first consequences of *using* the weapons you gave them (lawsuits, errors, mailbombing, etc...). And what would you say the day a little nervous guy will use one of your missiles to zap an annoying thread about Magic (or Stos) because he thinks MiNT (or GFA) is so better? You must at least think about such things before any weapon distribution.

>I will continue to spread the word on how it's done.

Well, at least explain the *real* cancel procedure.

All that said, I thank you for what you have done (and do) against spam for our quietness here on atari groups.

Bye! Bruno.

Is there a utility around which will convert 1st Word+ files (.DOC) into
plain ASCII files? Preferrably Free/share-ware/PD.

You need SCSI drives. Seagates should work great - you need a suitable
host adapter, that's all. The Link96 is arguably the best you can get
right now. Assuming you have Web access, you should find a link to
Norbert's pages at my site (see sig file below) but just in case:
http://members.aol.com/NorWiecz/index_e.html
Be sure to order the version that includes HDdriver, it's well worth the
extra cash and you're going to need some kind of driver software anyhow.

>Next could some one please post a few addresses of supplier's that have mail
>order any where in the world for the purchase of TOS ROM's they have not been
>available in my part of the world since 1991.

Toad, Computer Direct, Best Electronics - all listed at my page, but
send email to info@compdirect.com or info@toad.net for email replies.

>Another request is for an EPSON LQ400 Printer Driver I only have the daisy wheel

>I,m using tractor feed.

It sounds like you have form feeds turned on in First Word, or possibly
the printer is set up for auto form feeds; turn that feature off.

>I would like to purchase a blitter chip as well if any one can point me in the
>right direction.

Same vendors as the TOS chips - see above.

>Another need is for shareware or other Modem Drivers / Comms Software capable of
>speeds higher than 9600 once again nothing can be found in my part of the world
>And I have spent many hours on the German FTP sites and fu net but with no luck.

Go to ftp.teleport.com/users/atari and try STarcall - it supports 19200
on your machine (faster if you have a modified serial port; the hardware
on the bog-standard ST is limited to 19200, however). You alos need
HSmodem 7 which can be found at the same place.

>About the TOS ROMS my STx1040 was a prototype and it had the 1985 ROMs in it

<SNIP>

Rolf, I'm sure the Sweet16 sequencer is good (not being musical, I couldn't say for certain, but if it werent', certainly someone in the newsgroups would have said so by now). However, for you to come in and post an article that pretends to look at it as a third party can only cause readers to view both RONI Music and Sweet16 with suspicion; it sounds very much like the spams one sees constantly in other areas of the net, wherein some fictious person claims that they "found" a great web site - and when you point your browser at it, lo and behold, the site is a pay-for-play commercial site.

I would strongly advise you to simply reword your articles and say right up front that the Sweet16 demo is something you have available - trying to pretend that you aren't connected is especially ludicrous when "RONI Music" is all over the headers in your articles.

I found a folder on my harddisk called simply "68882". Obviously it has
something to do with the FPU (?) on the MegaSTE, but what?

Since my French is pretty rusty, can someone who understands the language
please tell me what it's about by looking at the "readme" below?
(I don't need a translation of it all, just an explanation of what it
does).
Thanks.

Hallvard

---
Le programme 68882 doit ?tre plac? dans le dossier AUTO
de votre partition de boot (C).

Ce programme permet l'utilisation d'un 68882
dans un Mega STE avec les programmes compil?s en
TURBO C et PURE C. Il n'a pas ?t? test? avec les
programmes compil?s en LATTICE C qui sont plus rares
mais si vous aviez un tel programme qui ne
fonctionne pas, nous vous prions de bien
vouloir nous envoyer ce programme pour que nous
fassions une mise ? jour du programme 68882.

I beg to differ. The Spectre GCR 3 ( I have two and still use
them) emuulated a Mac Plus. With one meg of RAM in my 1040st, I could
run Mac software considerably faster than the Mac Plus could. It used
to astonish the diehard Mac people who used to look down their noses
at Ataris. The Spectre was (is) a great product. With 4 MB ram,
which I now have, it works even better and crashes less.
I have not tried it, but I would imagine that if there is an
early version of Netscape or Mosaic that ran under the system 6.x of
the Mac Plus, it would run on the Spectre GCR
Obviously, modern versions would not.

>file formerly did.

Here begins an essay ... <G>

Close. A filename is stored in a 32 byte directory slot, the first 11 bytes of which is used for the name. If the first byte of the name is zero then the entry has never been used. If it is hex $E5 then the entry has been used and subsequently deleted. Any other value represents a valid filename entry.

When the operating system wants to store a new file it scans the directory slot list from the beginning and uses the first available slot, that is one with a zero or $E5 as its first byte.

The FAT is actually a single linked list. The directory slot contains a single (12 bit for floppies, 16 bit for HD's) cluster value. This indexes into the FAT and represents the first cluster used by the file (some calculation is needed). Locating subsequent clusters used is achieved by reading the value at the current FAT position and using that as the next FAT index. This is repeated until a special "end of file" FAT value is encountered. Another part of the directory slot stores the exact file length so the system can tell how much of the end of the final cluster is garbage.

When a file is deleted, all the system does is plonk $E5 in the first byte of the name then follow the FAT chain changing the FAT values to zero which represents "available for use". The rest of the data in the slot is not touched and neither are the clusters which were used by the file.

>I suspect it has to fit within the space vacated by teh previous
>occupant, but don't feel obligated to run the necessary experiments to

>verify that. <G>

When a file is created the system just starts looking for zero entries in the FAT then links them together. It makes no attempt to find enough empty clusters together, it just starts at the beginning of the FAT linking them together wherever it happens to find empty ones until it has found enough. This is how fragmentation occurs.

When using an "undelete" utility, it becomes apparent that conditions have to be just right to retrieve the file ...

1) The deleted file's directory slot must have not been used.
2) None of the clusters used by the deleted file can have been used by later files, otherwise part(s) can be corrupt.
3) The cluster chain is irrevocably lost, so odds are that unless the clusters that were allocated happened to follow one after the other then chances are slim. ie the greater the fragmentation the worse the chances of retrieval.

About the only clever bit about the msdos scheme is that subdirectories are organised the same as files so much of the code used for files can be re-used. This is why there is no real limit on the number of filenames that can be stored in folders - the "subdirectory file" will just be extended. The root directory does not have this luxury which is why its size has to be fixed on partitioning or formatting.

This is one area where Micro$lop would have had *good* reason to change the implementation slightly when storage became less critical. Rather than free up the FAT on file deletion, they could have just stored $E5 then made the code look for unallocated slots in preference to the first free one. Only when the slot got used or lack of space dictated then should the FAT then be freed up. Undelete would be better. Also, the code should have looked for enough consecutive FAT entries on creation which would have lessened fragmentation and thus head movement. Both ideas are backward compatible also. The proof that these are good two good ideas is easy - Micro$lop never implemented them! ;-)

Here endeth the essay [and the cider] <G>

A modern day Pentium can only just emulate a 1985 Atari ST. You

Danger Will Robinson - Error Error. A modern day Pentium can run gem applications at *many* times the speed of that 1985 Atari ST. Actually, a 386 DX40 can emulate Gem in a useable way if your video card is good enough.

> Your post about the Atari emulating a mac: First of all, the mac emulator
> (Spectre GR) you are talking about was back around 1987 or 88. It could only possibly emulate a very old 1985 macintosh, and even then, the emulation was quite slow. You needed 4Mb of RAM to emulate a 1Mb Mac (which was the standard

Also not true. When Spectre came out it could run mac software at a speedy 8 mhz compared to the mac plus 5.7 mhz. And four megs of ST ram gave you about 3.8 megs of Mac Ram.

A megaste could run mac software at about 16mhz, comparable to an SE30.

> an emulator because of the ram limitations, the old System 6 OS, the long gone
> Spectre GR software, the Atari cannot rune with more that 4Mb. That's a
> hardware limit that can only be broken with serious and expensive hardware
> modifications.
>
Spectre can run Quark Express 3.1, Aldus 3.1 and lots of serious software. The area you are correct is about the system limitation, limiting Spectre to system 6.xx. That rules out netscape use because as I understand, all the tcp software to log into the internet requires system 7.x.

In my opinion, there's been few emulators produced as well as spectre was.

Hello,

I'm wondering if it is possible to read my midi files on a Atari ST machine. I use Windows NT/Win95 and Cakewalk for Windows to create my music. I can export to .mid format, and want to put these files onto a diskette and read it on my friend's Atari ST (Cubase).

I know that I have to use a 720 KB formatted DD diskette, but is that all?

Thanks in advance,

Michael.

td> How does one do this? Tell me more.

There's CPX that comes with HDDriver that does this - HDDRCONF.

>which, helas, doesn't support true GEM windows ...

Oasis does in fact support PPP. However it appears there are two PPP
standards, an older standard which it does work with and a newer one
where it failed. The newer standard was only discovered by Dave about
10 days ago, and he is now working hard to implement the 16 additional
commands needed.

Hello,

The following ST software is for sale. All programs include the
manual unless noted. Shipping is extra. No CODs.

$23 STraight Fax 2.5 Full-featured fax program
$14 Pagestream 2.2SE Desktop publishing with Postscript support
$14 ImageCopy 3.5CD Multi-format image capture and manipulation
$14 XBoot 3.10 *THE* boot manager for the Atari

$ 9 Chaos Engine Intense arcade action from the Bitmap Bros
$ 9 Doodlebug Colorful, fun platform game from CORE software
$ 9 Torvak the Warrior Side-scrolling action game from CORE software
$ 9 Wolfchild Action-packed arcade adventure from CORE software

$ 7 Misc Chips YM2149 Sound Chip, WD1772-PH, 8519 (2)

Email if interested.

D>merely an example of MagiC not being able to multitask in supervisor
D>mode.

I don't know Lattice C at all but are you sure the reason why MagiC can't multitask is the supervisor mode? If a program blocks the screen via wind_update() MagiC /does/ multitasking, but you can not see it (because every screen output is stopped).

Regards
Goetz

Argh! I thought we could do better than have windoze95 features on our
systems.... I hope this feature with the icons will improve in the next
versions of "Thing".
I tried what you said, and you're right, but using icons is so much nicer
than plain text.

>>-Sometimes the system locks up while copying/moving files on the desktop!

Yes, I'll be getting Kobold in a short while, so I guess everything will go
a lot faster then.

>Oh, and be sure that you
>have NOT enabled write caching in your hard disk drivers (or with
>WBDAEMON or whatever it is). It seems to speed things up, but unless

Oops! I wasn't even aware that I had this option switched on, but I did!
I ran "Hdutil.prg" from ICD and reconfigured ICD's "icdboot.sys" to turn
off the write cache. But having the read-cache on is OK, right?

Call 408-743-8710, fax 408-745-1816, or point CAB at www.corpsys.com -
I've done some business with these folx, and they are quite
well-informed for PC Pukes. <G> They handle SCSI almost exclusively, so
if you say "I want SCSI-1" they will know that's not the same as EIDE
(which cannot be said for most of the salesdroids at your local Radio
Shack).

If you delete a file from th AUTO folder adn later copy something else
in there, it may end up occupying the slot in the FAT that the first
file formerly did. I suspect it has to fit within the space vacated by
teh previous occupant, but don't feel obligated to run the necessary
experiments to verify that. <G>

I agree - so I live with the lower speed. The Nemesis should improve
that. <G> A big second-level cache would help, too. Hmmm, maybe run
Thing from a RAMdisk?

Basic rule: Read cache GOOD, write cache BAD! If you back up
everything important every day, the write cache is OK - but you can
still lose all open files when the crash comes. Read cache doesn't
write to the disk, though, so it can't harm you.

Thanks. I was hoping for a smaller utility, like a .TTP which you can drag/drop the file into and it converts it into pure ASCII text, but I guess this will do. I'll check it out.

If you are using MiNT or any other unix clone on your system, you can
use the command "strings" to pull the ascii out of a .doc file. Just
use the command line "strings example.doc | more" to read the text.
To put the text in a file use "strings example.doc > example.txt".
Hope this helps.

I have the demo to this program. It works fine except I cannot get it to download any files from a BBS. I was wondering if the reason was because it is a demo and if that was one of it's limitations? I want to register, but only if I know it will work for me on my Hades 060.

## 5626. "Alice in wonderland" (.HYP) file corrupt!

Newsgroup: comp.sys.atari.st
Date: 1997-03-22 00:00:00 UTC
From: hallvart@sn.no
Message-ID: <3333bdf0ff34b5@sn.no>
Source record: 125338

Has anyone got the "Alice in Wonderland" hypertext file (.HYP) for use with ST-Guide which works?

I downloaded mine from Funet.fi, but it doesn't work- just bombs when I try loading it into ST-Guide.
Where can I get hold of a working one?

(PS. Please don't start sending me this file everybody, so I end up with several Mbytes of the same files- contact me first if you have it available!)

>Now to find out for sure.
<snip>

Hi Rich,

Here's how one bulkmailer says how:

"You can have as many as 1.1 million e-mail addresses in a list. The average
length of an e-mail addresse is 22 characters, so every 45,000 addresses will
add one megabyte to its size. Your e-mail list should be no bigger that one
half of your computer' available memory - meaning you'll need at least 42 megs
of free RAM to process a list with over one million e-mail addresses."

"There are nine ways to create an e-mail list."

"You can extract e-mail addresses from newsgroups (Headers)"
"You can import any text file and Mailxxxx will extract the e-mail addresses from it."
"You can add e-mail addresses manually."
"You can extract e-mail addresses from any file downloaded with the FTP client."
"You can extract e-mail addresses from any file downloaded with the HTTP client."
"You can construct an e-mail list from the results of a finger request"
"You can extract e-mail addresses from the results of a WHOIS lookup"
"You can extract e-mail addresses from the results of a UNIX command"
"You can allow people to 'subscribe' to your newsletters"

I have no reason to doubt any of this. As you know, DejaNews can easily find
any e-mail address in the text message (in blue) ,so I assume so can bulkmailers.

CS>>know there are literally millions of people fed up with spamming. So a
CS>>little creative programming may be the answer; both legal and effective.

>How much money do you need to get started? <G>

Well, I was going to ask you the same <g>. Basically, I don't think this is any
secret, you need a prg that auto executes when unMIMEd on Windoze PC's, which
would delete YOUR "private" e-mail address from the Bulkmailer's data file :)
Then deletes itself. Not a virus, as it doesn't replicate.

Legally, this may be acceptable. Something "Nasty" may not ;) Netscape "cookies"
allows webmasters to write data to your HD, so deletes may also be allowed for
unsolicited e-mailers :) Not a lawyer, so... My "understanding" is similar
prgs do exist, only a bit more "unpleasant". The guys/gals who hack this stuff

should wakeup and "Smell the Coffee". (See below).

CS>>Wouldn't it be ironic if an Atarian developed this software? "Nasty" or
CS>>otherwise; It would be a BIG market...

>It /is/ a big market. Maybe the only real way to make big money on the
>Internet.

To be honest, I'm a bit surprised that someone hasn't done this already.
The "Key" word in the USA these days seems to be "Show Me The Money!!!"

This more a dos problem than a Atari problem. Yes the controler can be
bad or bad cables but probably is the drive try it on another mfm
controler. Then swap cables get a working system and isolate the failing
part. Frank

No, but there was a custom cable designed for use with Darek Mihocka's
8-bit emulator on the ST. I can't remember Darek's e-mail address, but
his company (which markets 8-bit and ST emulators for the Windoze) is
called Branch Always Software (BRA-Soft) and is on the web... perhaps he
still sells these cables?

>

The number of 'quarks' needed to store? All these number combinations?
It can be said that all these combination exist already, yet are not stored
anywhere.

They exist, theoretically, in the same way as any other number.

Wether a number be one digit long or 2^20 digits long, doesnt alter much
really.

It is only *our* minds which baulk at the number of digits.

Nothing to do with the number of atoms in the universe or whatever.

Just because something is incomprehensible to the human mind, this doesn't

alter the fact of it being theoretically possible, and in fact, existing.

The speed at which computers today operate on numbers, would have been

beyond believe not so long ago.

We imprison ourselves, by our own ignorance I think.

That is one possiblity (and protected software is then going to
fail to run in both emulators anyway) but if the software is not
disk-copy protected, it may just have been formatted using one
of the 'fast format' options available, or an unusual interleave
factor. Use your ST to copy the disks to a a new disk without
using any odd formatting options and you should have more
success.

ST+ ISSUE 14
The Monthly ATARI PD Diskmagazine
http://www.geocities.com/TimesSquare/Alley/7454/
Editor Dave Hollis
Compatable with All ATARIs Min 1 Meg,
ST, STe, Falcon, Mega's and TT

ST+ Has been released at the end of every month for over
a year now, At last it is on line and available for download
from its new home at the above url, the page is under
construction so bookmark it and keep going back, not forgetting
your RELOAD/REFRESH Buttons :)

You will have to hurry for Issue 14 as ST+ 15 is due for release
at the end of March,

** NOTE ** PaCifiST users can downlaod the diskzine as a ready to use
PaCifiST image file to run in your brilliant ATARI emulator, just go
to the page and follow the links.

This Diskzine is Free, Its Current, Its got loads in it and it
is released EVERY Month

Heres a list of what you can read in this issue........

** NOTE ** This is NOT a STOSSER Software release, I make the
Diskzine shell for this and many other current UK Diskzines,
However Much needed Feedback, Comments, Snippets and maybe even
Articles, as well as reviews, messages and Letters, can all be
sent to me at stp@stosser.airtime.co.uk and will be instantly
passed on to the Editor Dave hollis...........

ST+ 14 INDEX OF FILES

REGULARS

[] THIS ISSUE.......This file...
[] SHELL INFO.......Some info to get the best out of ST+.
[] WELCOME AGAIN....My usual bit from me, myself and I.
[] CONVENTION REP...More info on this great idea.
[] CONVENTION INFO..CiH has a few things to tell ya.
[] READER LETTERS...More of your views and suggestions.
[] NEWS.............Only a few bit's this month.
[] STOCKMARKET......Reader adverts.
[] QUESTIONNAIRE....Reader feedback,
[] KONTACT KORNER...Wanna get to know some new Atari users

ADVERTS
The following are commercial adverts...

{} ALIEN TECHNOLOGIES.
{} ANALOGIC.
{} FLOPPYSHOP.
{} FLOPPY PHOTO's.
{} GASTEINER.
{} GOODMANS INTERNATIONAL.
{} PROPHECY PDL.
{} TITAN DESIGNS.
{} A.S.P.

OTHER ADVERTS
The following are misc adverts, important nonetheless.

* ALL AT SEA BBS.
* MAGGIE DISKZINE
* WARP DISKZINE
* KELSTAR DISKZINE
* STOSSER.

* ON THE HORIZON.
A NEW BOOK..

ART GALLERY

[] CLASSIC MOMENTS - Jody D'art..
[] HAPPY BIRTHDAY - Almost as good as a card..
[] SMALL REMINDER - Just in case you forget.
[] MARBLE ARCH.. - A great piccie I found that impressed me.

SCI FI CHANNEL

{} THARGOIDS... - A story by Martin.

ASSEMBLY

# HELLO THERE - Steve seems in a better mood, find out why.
# ARRgghhhh!!! - But then he's off ranting again..
# PICTURE BOOTIN' - A reader letter answered.

RESEARCH

{} JODY'S BACK.. - ...with a vengeance.
{} DANDY KANDY - And more grumbles.
{} COMPUTERS Pt 1 - A brilliant bit of research from Colin.
{} WHERE ARE THEY? - And then some from Jody.

MUSIC'N'MIDI

[] BACK AGAIN... - More jivin' from the man Nev.
[] TRACKER COMMAND - Tracker commands made simple.
[] MUSIC REVIEWS - Pretty self explanatory really.
[] MISCELLANEOUS - The bit's that didn't fit anywhere else.
[] GOTTA FLY.. - And it's goodbye from him.

CONSOLE CORNER

' NINTENDO 64 - Is this REALLY the wonder machine..?
' VIEW POINT.. - Sega Saturn game review.

FALCON

+ THE FUHER... - More from Martin.
+ 030 GAMES - Some Falcon compatible games.
+ LOST BLUB DEMO - Falcon super demo,.
+ FALCONS & ST+ - Compatibility central,
+ THE TWO REVIEWS - More falcon reviews

REVIEWS

* DBWriter - As if I didn't do enough word processing...
* KEEFY'S BIT.. - Mr warp's loose in this very mag..
* DOMINOES - Review of that all time classic mind game
* I.C.B.I.S. - STOS users read on..
* BACKGAMMON - Another mind game..
* GHOSTLINK - Fancy using a PC as a slave to your ST?..

DISKMAGS DEPT

# A FEW FACTS.. - Wiggle central..
# EEZI-PC - A review of by the Maggie team.

HARDWARE

- ZIPPIN ALONG..Feedback regarding last month Feature

FEATURES

() GEM'ulators..Tony Reviews (PRE PaCifiST)
() ATARI v PC - Which is best (as if we didn't know)
() MORE GRUMBLES -Is there no-one who's not moaning?.
() C TUTORIAL pt2 - More help with C programming.
() I SEE THE LIGHT - Disheartened ST users read on..
() A FEW IDEA'S - Actually, a LOT of idea's..

() NEXT MONTH.. - The not so final curtain..

Cheers !ynoT ( ATARI Programmer )

DLD> then quit asking for illegal ROM Images in this site. It'll solve
DLD> the =
DLD> problem nicely.
DLD> =

Ok, let me just say this so you can relax again: THe emulator did not
work !!! Happy??? (I have an Amiga1200 and this is the problem!)

And now I have a Q 4 U:

Is there a Amiga emulator for the atari ??? if an Atari owner want
to see if the amiga has something to offer is it then ok for him to
get a rom to test it?? NO (but when YOU are in the same situation then
I'll bet you will shit on the rules and then just do it. No NO of cause
you will buy a Amiga to test it would'nt you?? (Right!)

So please stop being SO strict!!

>> RT> Judging from the X-Newsreader header, you make a regular habit of

>
>RMS
>
Don't waste your time ... Oasis 2.10 pretend to support PPP but in
fact it doesn't ... A lot of people has spent too much time trying
to make it run in PPP ... It doesn't ... It's really a shame for the
program and the creators who do even not answer to our complaint ...
Then whe have no choice and must continue to use the old 1.35E version
which, helas, doesn't support true GEM windows ...

I don't see anyone holding a gun to your head and forcing you to write
articles.

Regarding your plaintive lament that you can't find a retailer to sell TOS
ROMs to you - I refer you to THIS newsgroup:

<forwarded message follows>

FROM: modemkid@gate.net
SUBJECT: ATARI RETIALER GONE OUT OF BUSINESS. SELLING EVERYTHING IN STOCK
DATE: Tue, 18 Mar 1997 03:12:19 GMT
Message-ID: <332e072c.638055@news.gate.net>
ORGANIZATION: CyberGate, Inc.
NEWSGROUPS: comp.sys.atari.st

Atari retialer gone out of business is selling everything in stock.
1000's of ST software titles (mostly games) & some hardware. I have
no list's, make out your wants and email me at modemkid@gate.net or
call me between the hours of 1pm - 9pm est at 561-464-0019. Ask for
Gary. Most items are one of a kind. Quantities are limited, act now
before your wants are gone. First come, First serve.

<end of forwarded message>

If you can't find anyone to sell you the TOS legally, it's because you
aren't trying.

>moron!

What an unusual .sig file.

Is it possible to be able to read files that were created in First Word Plus on the ST all of 5 years ago on my PC?.I had heard that there was a small utility that could do this but where it is I don't know.

I would greatly appreciatte it if spmeone could kindly point me in the right direction

FS> Martin's RAM card does *not* use the VME slot, its internal.

I wish I'd known about this before. It would've saved me a lot of
aggravation... B^{< The trouble is, I had an EMail about this card last year
from Michael Depke, which quoted a message from Martin Wevelsiep dated 1993,
which quoted a priced of 449DM, not the 149DM quoted by Jan !!

====================INFO ON====================
Von : Martin Wevelsiep @ AC3 (Mo, 20.12.93 10:32)

[cut]

Die Mega STE-Version geht nur bis 10MB, weil darueber der Adressbereich fuer
den VME-Bus liegt. Sie wird vor dem Netzteil eingebaut, wodurch der Platz
fuer eine Buskarte nicht eingeschraenkt wird.

[cut]

Die MegaSTE-Version kostet ohne Speicherchips 449,- zuzueglich 160,- pro zwei
MByte Speicher.
====================INFO OFF=======================

FS> But I would recommend to install a PAK with FRAK instead because with
FS> a FRAK your ST can have up to 64 megs of FastRAM.

The problem with a FRAK is that it needs a PAK, which involves considerable
expense both to purchase and to fit (for additional expense) into a Tower
(additional expense) unless you have an external power supply (messy).

I know Steve will come along and say it's a solid piece of kit, but I can't bring myself to think so tbh (it's your third isn't it, Steve?)

Much rather have a TT and solve all problems at once B^{)

Whoever it is that is looking for the WP package, I have the ST format
version of Write on, as mentioned below, I also have a copy of the
original Manual to go along with it. If interested drop me an E. Mail
and make an offer. Not expecting much for it but something for the
trouble I went to to look after it so well all these years would be
nice :-))

h>
h> Is there a utility around which will convert 1st Word+ files (.DOC)
h> into plain ASCII files? Preferrably Free/share-ware/PD.

1st Guide will do it quickly and easily.

Load the FWP file and it displays with all (most) text effects intact.

Hit ^X and it'll save an ASCII file with an .OUT extension. Simple!

Of course not, how dare you suggest that I/we are hypocrites and
pirates.

> NO (but when YOU are in the same situation then
> I'll bet you will shit on the rules and then just do it. No NO of cause
> you will buy a Amiga to test it would'nt you?? (Right!)

I wouldn't buy an Amiga of course not, I'd put an advert in the locacl
paper to buy a copy, it's probably only cost me a fiver or so from
someone who no longer used their machine I expect.

> So please stop being SO strict!!

Even if people did pirate the AmigaOS that doesn't make what you do
acceptable or righ, it just makes both WRONG.

> As far as I know the programmer does not develop my mailer anymore, so
> why should I??

You are using software someone took a lot of time and effort to produce,
maybe if the people that used it bothered to register he would still be
writing and updating it? It seems only fair that you negociate with
them they may be willing to accept a more modest fee now that they don't
develop it.

> Hey, where do you live?? in a cave where they have just oppend an
> Atari ST store. Better think again! Denmark is pretty much the most
> hitech country in the WORLD!! So there are NO Atari's!!!! (for sale!)

> I have checked papers/used gear/everything..

I didn't know anything about Denmark being hi-tech as you put it but I'm sure there is someone that will sell you a copy of TOS. If you have a credit card the you can order overseas with great ease.

> DLD> Oh, wait, I forgot - you're an idiotic tightwad who
> DLD> thinks DLD> the world owes him.
>
> I am so sorry that you live in some old stinking cave..

So if someone lives where there are shops that sell things that they want to buy, old or new, then you define that as a 'cave'. Maybe it's something that just doesn't translate into english, I think you might have hered of "supply & demand"? In the UK I believe System Solutions have something like 7 telephone lines and I always have a hell of a time trying to get through so there must be a pretty big market here still and I can't imagine that it's far worse in Denmqrk.

> >> moron!
>
> DLD> you certainly are! :)

If they are piratating software on a platform which is strugglig to keep
any form of commercial support then they deserve a great big flaming.

> Go take your compliants
> about piracy issues to some debate newsgroup or something.

No, take the piracy stuff to the warez groups. I believe the charter in
this group says no piracy but I don't have a copy to hand ATM.

You're gonna get answers galore on this.

Yes, but you will need a host adaptor. There's ICD's AdSCSI, and Toad's
Link. Both do quite well. There's others, though I've not used them yet.

IDE, well, unless you can find the controller for it. SCSI can be used
quite easily. I use SCSI and SCSI-2 devices all the time.

From: bjr@Edison.EbiCom.Net
Message-ID: <5h1m0q$5qf@einstein.ebicom.net>
Source record: 125372

Aloha,
I've had an EZ 135 for some-time now, but until recently
I've had no need to try using BigDOS to format some of the Cartridges
in a PC compatible format. I'll be attempting this soon.
My question is this...
Will Diamond Edge work on the PC formated hard disks, as I will
be wanting to defrag my DOS disks quite a lot since I'll be using
my EZ-135 to transport CuBase Audio files from PC to PC in a BIGDOS
format.

Thanks,
Brian

His company is now called Emulators Inc. I wonder if Darek works for
MS, he is in the same neighborhood.

PW> So if someone lives where there are shops that sell things that they
PW> want to buy, old or new, then you define that as a 'cave'. Maybe it's

Hello?? how old is the atari??? HMmmm if he is so lucky to have a
store in his town then GREAT for him, but dont expect that it is the
same in other countries!!

The atari is dead !!! even the amiga!! there are only 2-3 active Amiga
stores in Denmark (and they say the end is near!) so maybe you can
imagine how many atari stores there are... (ehhhhh NONE!)

If there are filled with atari shops in his/or your country/town then
it is a cave because the pc market has taken over years ago.

Do you know what a PC is?? or maybe such a device has not arrived
in you town yet?? ohh let me know..

PW> something that just doesn't translate into english, I think you might
PW> have hered of "supply & demand"? In the UK I believe System Solutions

Ehhhh what?? FUCKWIT! of cause!! but since I am the only one in DK =
then a store will pop up tomorrow and sell me it.. YEAH RIGHT!

PW> have something like 7 telephone lines and I always have a hell of a
PW> time
PW> trying to get through so there must be a pretty big market here still
PW> and I can't imagine that it's far worse in Denmqrk.
PW> =

It is worse in *DENMARK* . There is no demand for the Atari at all.

>> >> moron!

>> DLD> you certainly are! :)

>> hahaha you are really funny caveman!!

PW> Fuckwit.

Ok, another caveman tried to hit the right keys... and when you reply
to someone could you please be so nice and use the 'TO:' ??? =
Only lamers do not use 'TO:'!!!

u.r.a.lamer.

There is no need for a SIMM board in an Atari STe computer. The STe has
four SIMM slots.

Hello Daron,

I'm really astonished by your answer as I'm trying to contact Oasis
author's since a lot of weeks ago without any success ... and also I
have payed my program fee for Oasis 1.35E and they never sent me a
registered version ... and above all they never answered to any of my
10 e-mails ...
Then I must thank you to give me some hope ... and to other hundred
million people who are waiting to use the next version 2.10 with
succes ...

Thank you again, I will never forgot your e-mail address.

Regards
Jo

Cross-posted to: comp.sys.atari.st,rec.games.video.marketplace,rec.games.video.atari

I'm looking for a working system that has the MIDI ports, a DS disk drive and either an RF modulator or monitor for display.

I've seen these systems go for around $70 on the various action web sites. I have a HP 48GX calculator valued at $130-$150 to trade for a similar system. This calc is expandable with plug in cards, has a built in equation solver, does graphic polts and is great for school as well as mechanical, electrical, chemical or civil engineering professions.

If you're interested please respond to

GJulian@Micron.Net
I would consider paying postage both ways.

# 5679. Re: StarCall

Message-ID: <33352504@p126.f503.n286.z2.fidonet>
Source record: 125191

Hi Edward,

In your message over Starcall's not receiving file's from a BBS well here's my solution. You have to install the program GSZRZACC.PRG or ACC. in an AUTO folder. If you installed this program you'l see that your problems with downloading and uploading from a BBS is no longer a problem. Beware that you look for the config. of Starcall if the 2 file's SZ.PRG (sendfile) and RZ.PRG (receivefile) is correctly installed.
Well I hope that all this information will help you too start and enjoy Starcall.

Greetings from Eric.

Sounds fine by me! I've experimented and found out that OZONE 1
actually works very well on a Falcon when fixed with Anthony's programme.

Of course, there is that thorny issue of copyright again - no, I
don't mean commercial games, but I mean the shareware stuff - wouldn't
we need to get the permission of the games' authors before we start
putting up fixed versions of their games? And of course, shareware fees
would have to be paid....

I'd be first in line to try out a fixed version of H.E.R.O. on my
Falcon, anyway. :)

I found a few *.ST files that I would like converted back to ST disks. Is there an ST program that will do this, or will Imgbuild do it? I tried getting that program off of a web page twice and my PC decided to hide it. I can't find it in any directory.

The implications I see here is that a hard drive is needed to install Gdos.
This isn't the case, is it?

I never heard of Protext. Is this a word processor (versus a dtp program)?
How does it compare to Marcel?

Yes:
Install a copy of First Word Plus on your PC! I used to transfer files
from one machine to the other. You have to use a DOS formatted disk
though.

Hi Gary,

Just wondering if anyone in the UK would be interested in trading a Nemesis board and installation Manual for a 2.5" 84meg Conner IDE for a internal Falcon Drive in excellent condition. Heck, I'll even throw in a 4meg RAM Falcon board! The Conner is formatted in four partitions with AHDI 6.061 boot loaded.

BTW, did you install Nemesis yourself?

# 5691. For sale: CaTTamaran 48Mhz accelerator for TT030

Newsgroup: comp.sys.atari.st
Date: 1997-03-23 00:00:00 UTC
From: mbecroft@tos.ak.planet.gen.nz
Message-ID: <HCXUFGUQUp@tos.ak.planet.gen.nz>
Source record: 125245

For sale:

CyReL CaTTamaran 48MHz accelerator for Atari TT030 machines. Accelerates
CPU and FPU to 48MHz.

Unused, unopened, still in original wrapping.

Installation is simply "plug in and go" on newer TT030 motherboards, some
soldering may be required on older boards. Comprehensive instructions
on paper and easy-to-follow onscreen step-by-step instructions for the
installation supplied.

NZ$90 (approximately US$60, UKP30) or near offer, plus shipping.

Please contact me at

mbecroft@tos.ak.planet.gen.nz

with any reasonable offers.

>with oldGEM under FreeMiNT.

I have used AES 4 with GlueSTiK without any problems, although I have not
tried the most recent GlueSTiK version in this manner. I just executed
GlueSTiK from the mint.cnf.

I also have got XaAES going fine. I'm using MiNTOS, and when I get to the
shell prompt I just start XaAES. The Moose server has to be put in the mint
directory first, of course. This is on a TT030; I heard that on a Falcon
you need to specify what resolution you want, or something, when starting
XaAES - maybe this has got something to do with the problem.

>we need to get the permission of the games' authors before we start

There arnt many games that are sharware anyway? well not STOS ones,
and anyway its probably mute as the way I can get them working on the
FALCON and the TT etc is when actualy compiling so would need the
source to any of these games ?

> I'd be first in line to try out a fixed version of H.E.R.O. on my
>Falcon, anyway. :)

hehe....

well it had entered my mind to recompile hero to work on falcons, tt
and other normally not available tos versions,

hero is a couple of years old, disk access would need re writting in
order to use the hard drive, i simply didnt know how orignaly,

hero worked JUST on one meg, so changes would mean it being two meg
minimum, but as the version would be for mega, falcon and tt owners
etc then memory shouldnt be a problem

hero used some chip music for snd effects, these would have to come
out and replaced by sampled sound, and sampled at a good rate as the
lower rate is the same as OFF to a falcon ?? so definatly over one
meg, this would actualy mean a enhanced version? if your going to go
over one meg you may as well go all the way and use the 2nd meg :)

levels would probably be better being re designed as a lot of falcon
tt and mega owners will probably have played hero when they had a st?

so as you can see, its not just a case of re compiling?,

heres the question?, i am about to finish BILLY BOY the
"** childrens **" platformer, then starting work on a TEMPEST clone
thats going to knock your socks off,

I could do the HERO convert while awaiting artwork and things like
that for other projects, it shouldnt take that long, BUT because its
not that simple then i aint doing all that for 2 or 3 people, if

theres enough interest in a enhanced 2 meg version of hero for the Falcon and Tt and other fancy ataris then i will do it within the next couple of weeks, its as simple as that,

so put your name forward, enough names and it will get done, if you respond to this thread then everyone can count how many respond and i cant be accused of weaseling out :))

so lets see a show of hands...or lets not bother ?? sign below :))

There was an utility that converted FW+ files to Word Perfect 4.0, I
think. This utility ran on the Atari, not the PC. If you have acces to
an Atari and FW+, you could load each file and then save in ASCII, on a PC
disk of course.

Here is Oregon Research's reply to my request for more info on their upcoming Internet Software release for Atari computers. (I did not think they would mind my posting it here)

---

TTCP-Atari should be almost a mirror of the version for the Amiga.

PPP, TermiteFTP, TermiteTelnet, TermiteMail should be included.

As far as when, I could not say. Stay tuned.

Best regards,
Daniel Reichen

Tb be honest there isn't much new, the interface has been improved and
now looks much nicer, it also has a disk editor built in, underneath
though is pretty much the same, what's wrong with 1.10?

Well not me, that's for sure! I wouldn't swap my Nemesis board for anything
(well, maybe, Megan Ward from Dark Skies) <grin>

>BTW, did you install Nemesis yourself?

Nope. I had Titan Designs do it. I felt safer that way :)

A while ago, I had a program sat on my hd that ran through a path of
Windows .ico files and produced a .rsc file of them.
They could then be treated as Atari icons.

Of course, now I need the thing, I can't find it! :(

Has anyone got an idea of what this program is called and where I can find
it?

TIA, Gary

No I haven't. I'm not very musical and hence don't have it. Sorry!
Try emailing Titan Designs and asking them if they're compatible.

>of you guys are just jealous of IBM users or you are a wanna be IBM user.

Hey, pinhead - I work for the world's largest chipmaker, who has much to do with IBM boxes. I know a thing or two about 'em - and I use Atari machines by choice at home. Three of them at the moment, I don;'t have room for the other 12 that are boxed up here and there. My wife uses a Win95 box (with a genuine Intel CPU) - and I have to fix it almost daily because the operating system is so unstable and unrelable. And it's a VAST improvement over Messy-DOS and Win 3.x...

>There is no need to flame people in the newsgroup. Go take your compliants
>about piracy issues to some debate newsgroup or something.

Hmmm, let's see - some jerkoff wanders into my living room, calls me an asshole and screams "give me free stuff," you come in calling me and the rest of the /HONEST? people here "assholes," and /WE? shoudl take the discussion elsewhere?

Does the expression "Go to Hell" ring any bells?

>As for this newsgroup. This is a ST newsgroup dealing with ST topics,

Bingo!

>software, emulators,ect... Plus it is one of the only active ST
>newsgroup(s) around. Since the release of PACifist you will see alot of

I managed to do the conversion with a program I already had!
I loaded the .DOC (1st Word plus) file into "Write On" (which I had gotten
from a coverdisk that came with an issue of "ST-Format".

Then I saved the file as an ASCII file with the "save ASCII" option.

(Posted and mailed)

You will need a SIMM board as well, but otherwise, no problem. Sicne
you're in the UK, try to find a Marpet SIMM board. Possibly System
Solutions has them - the other UK Atari users would know that better
than I.

The following is the description from the man page. The file will
have to be cleaned up after you pull the text out of the .doc file.
The four characters can be changes to a diffenent number of
characters. Strings will work on any type file.

STRINGS(1) UNIX Reference Manual STRINGS(1)

strings - find printable strings in a file

DESCRIPTION
Strings displays the sequences of printable characters in each of the
specified files, or in the standard input, by default. By default, a se?
quence must be at least four characters in length before being displayed.

## 5725. NOS and INN 1.5 news server

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: bkozlowski@nordnet.fr
Message-ID: <859217962_OASIS_@nordnet.fr>
Source record: 125129
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st,comp.sys.atari.programmer

```
[followups in tech group only]
[posted also to NOS mailing list]
[no crosspost to demon.ip.support.atari, they are not concerned]

Hello all!

Many news servers update their software to INN 1.5 or 1.5.1. They'll
update faster to 1.5.1 now, after the "all-time bigest Usenet attack" last
week, as 1.5.1 is the only server protected against this cracking method
(well there are patches for some other servers, but...).

This leads to problems for us NOS users, as this versions disable
NENNEWS command by default, we receive "502 NEWNEWS command disabled by
administrator" and the sessions fails, no news... Well we can post our
messages, as they are posted before the get news procedure. Maybe it's
time to change NOS's strategy to get news, the NEWNEWS command is
supported by less servers each day as it uses on the server more memory
and CPU time than any other nntp command.

In the meantime, if you can, ask your news administrator to change his
config.data file, partial quote below:

----------- 8< ----------- [INN's config.data] ----------- 8< -----------
## Allow the NEWNEWS NNTP command? Pick DO or DONT.
## (RFC 977 says you should; your server performance may not agree...)
#### =()<ALLOW_NEWNEWS @<ALLOW_NEWNEWS>@>()=
ALLOW_NEWNEWS DONT
----------- 8< --------------- [end quote] --------------- 8< -----------

Easy to guess, he must change the "DONT" to "DO" in the last line.
Perhaps he also needs to recompile INN, or only to restart it, it's not
clear for me. While we're with config.data, there is an option (on by
default) to slow down service for offline readers. Another partial quote:

----------- 8< ----------- [INN's config.data] ----------- 8< -----------
## Do you want to make life easy for peers to pull feeds from you (it's
## harder on your machine). Pick DO or DONT. With DONT, you get a small
## sleep inserted before each ARTICLE command is processed. (With
## apologies to the Australians in the audience).
#### =()<LIKE_PULLERS @<LIKE_PULLERS>@>()=
LIKE_PULLERS DONT
----------- 8< --------------- [end quote] --------------- 8< -----------

Same thing here, change last line into "DO", if you have a nice
newsmaster he'll do it. Otherwise you have a one second pause between each
article. And if someone could explain me the "Australians" stuff...
```

```
Bye! Bruno.

News@pwomar.demon.co.uk (Paul Womar) said:-

>what's wrong with 1.10?

Diamond Edge 1.10 if there are more than 1024 files in one folder can
destroy them all with "medic" function. It can also cut out near silently
the end of a file if it's lying on the 2 last clusters. If you have
"doubly used clusters" it medics by loosing both files, when by hand you
could generally save one of them. Has 2.04 this "features" too?

Bye! Bruno.

From: bjr@Edison.EbiCom.Net
Message-ID: <5h6rie$v9l@einstein.ebicom.net>
Source record: 125131

: >> I'll bet you will shit on the rules and then just do it. No NO of cause
: >> you will buy a Amiga to test it would'nt you?? (Right!)

I was in a similar situation in wanting to upgrade my Amiga's work bench.
It required new ROMS which I couldn't find anywhere new at the time...
or from any resaler...so I posted an ad to buy a broken (or otherwise
cheap) amiga to get the newer ROMS. It was only $25 including shipping
after all was said and done. No big deal...and worth $25...even if I
only used the Amiga as a dumb terminal, I'd still get my $25 worth of it.

: But I could have wasted money if I did buy it. And I am really happy that
: I did not.

It may be a waste for you to buy it...
But for anyone who plans to use it at all...it's not a waste...
The cost for TOS ROMS is well under $50...new, used, or any other "legal"
method I know of to obtain them.

: >> As far as I know the programmer does not develop my mailer anymore, so
: >> why should I??

Does it work?
Do you use it?
Then you owe him for it if you still use it beyond the stated trial
period. See...when you boot a program on your computer...CuBase on an ST
for example...it is no longer an Atari ST...it is Stienberg's CuBase.

You are not paying for what software can do tomorrow...you are paying
for what it does now. If it doesn't work, or you don't like it..erase
it from your hard disk, or pay for it. It's that simple.

Most share-ware is really inexpensive to begin with (dare say usually
under ten bucks). So what's so wrong with rewarding the author's work
based on the version you have. And if you really enjoy the software...
send him a 5 or so upon upgrades just to help him keep up the good work?

Would you expect not to have to keep paying your car payments if the
auto maker didn't offer free new parts on frequent occation? I think
not.

Finally...
Had you registered, you just might (most likely would have) gotten
updates...espically bug fixes. I see dozens of share-ware titles
on FTP sites that are way old...and will never be updated with newer
versions...but sending in your fee gains a much more modern version.

: PW> You are using software someone took a lot of time and effort to
: PW> produce,
: PW> maybe if the people that used it bothered to register he would still=
: be
: PW> writing and updating it? =

Amen

: Maybe, but my version is from 94 so if he still works on it I would
: see some more demos on aminet or?? or maybe I would have seen some
: announcements..

Maybe...maybe not...
Sometimes authors "trust" shareware libraries to keep things up to date,
and post announcements, yet they never happen. Sometimes they simply
don't have network access any more for some odd reason. You never know.
The bottom line is...if you use it...send the guy a check or don't use it.

Now, many authors expect a certian amount of free-loaders out there,
can really don't care what you do. It is a common courtesy however.

: PW> It seems only fair that you negociate with
: PW> them they may be willing to accept a more modest fee now that they
: PW> don't
: PW> develop it.
: PW> =

He might...did you send him anything at all?
An email?
A post card?
You might have found that he "DOES" still support it.
At any rate...it's still his lisence to grant or deny you by his choice.
If you want to use it...pay for it...upgrades and support or not.

: If he does not develop there is no money from me..

I'd be willing to bet he wouldn't get a fee from you even if he
did support it...unless of course he had a new feature you were drooling
for, and the only way to get it was to register. Then I bet you'd even
bitch and moan about that. My apologies if I'm wrong.

Brian

# 5728. FS: Atari Computer Goods! Some Listed! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5h72gh$lt8@nr1.calgary.istar.net>

Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, MonoChrome Monitors, Monitor Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

Thanks for the feedback. I couuldn't partition it so I tried
re-formatting it. I've since discovered that the drive itself was bad. A
bit of a disappointment since the dealer sent it to replace a bad one that
had been returned!

I am running MagicMac on a Powerbook 190 without problems in B&W.

It will run in 16 shades of grey fine but Calamus does not like it.

The LCD screen is 460x600 as in a ST. The speed on this 040 powerbook is
over 4 times that of a TT.

Go for it. I love it. Actually I am writing this on my Powerbook at the
same time as I am crusing the WWW.

>e-mail address anywhere in the header OR the text message the bulkmailers
>will find it ;)

Since it's conceivable that the spammers are actually smart enough to filter the word "spam" (seems unlikely, but hey, anything is possible), instead I suggest adding an easily-recognized word or acronym, such as mine (which means "There Is No Cabal" - read news.admin.net-abuse.misc for a couple of days to get a full understanding of why that's amusing).

Having a completely bogus email address simply discourages legitimate correspondents from emailing you (are you listening, !yonT and Paul?) and I recommend against that. Incidentally, it may be the next criterion for the cancelbots to target, because so many spammers are now using totally non-RFC-compliant From: headers - it makes their spam easy for a 'bot to recognize. Something that's at least plausible will be less liekly to be autocancelled.

Note to myself: Check the Path: header on this article.

Remove the "TINC" from my email address to reply.

Yeah, I thought of that too. But I think it'd be more trouble than it's worth.
Don't worry. I'll still send them to you since you're such a great contributor
to the Atari ST games scene!

I ddin't (surprisingly enough), but the proper thing to do is to forward them to abuse@aol.net in future. If it really was an AOLuser, they'd charge his credit card $500 for "commercial use" and then cancel his account for mailbombing (rather ineptly, too).

If that's the best he can do, no wonder he calls himself "lamer." How ya doin'. Mikey? ];^)

Can Anyone running a links page please add the ST+ as this is a permanant ATARI web page thats going to grow :)

Page Updated, added "Other Diskzines" section, put Maggie page in, complete with screen shots etc, plus in downloads area there is a direct link to maggie22 download,

The other diskzine section will grow and will include all the news on all other diskzines available, as time goes on, but heres snippets to keep you going.....

UC8 the german Undercover diskzine is out at on its way to our shores, content from issue 7 (and the xmas issue) is now nearly all in english,

STUNNED a new diskmag is set for release at the start of may, it sounds like the old stun title doesent it, ? but unconfirmed that it has any connections,

Kelstar diskmag die recently aged 7

STOSSER 29 released this week

for any diskmag infor, to me or wanted then please email me at

diskzines@earthling.net

many thanks.....pacifist users please note that maggie 22 worked perfectly, full speed and sound :))

ta

Cheers !ynoT ( ATARI Programmer )

That's ICO2RSC which you are looking for.
I have set up a page for these hard to find file. You can find ICO2RSC at

http://probehouse.home.ml.org

under the Useful Software section. More coming soon.

# 5745. TelVT102- a new telnet program for STiK and CAB

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: bdc2@po.CWRU.Edu
Message-ID: <5h50r8$2il@alexander.INS.CWRU.Edu>
Source record: 125198

A new program TelVT102 has been released for use with STiK.
It is a fully functional VT102 telnet, that can be used with any Atari
from ST-low to the fanciest Falcon video cards. It need some form of
GDOS to run, since it uses special ANSI compatible fonts, and special
line drawing fonts for semi-graphics. It can be called from CAB, when
CAB finds a "telnet://fu.bar.edu" type link.

You can find it on the STik source page,
http://www.flinny.demon.co.uk

Enjoy!

P.S. Yes, STiK is still very much alive!!!

# 5751. looking for cheap Midi program (shareware, freeware???) for STE

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: Dirk.Nerling@pdv.de
Message-ID: <5h5mvv$n9g@news.Dortmund.Germany.EU.net>
Source record: 125204

Hello all,

I bought a STE today for my girlfriend who is
a musican. She wanna use the STE for MIDI with
her Digital piano. Does anybody has an idea
where I could get a shareware or freeware
midi sequencer???? Btw. should be a cheap
solution, because she is an student, the STE
cost $75 and so the software shouldn't cost
$100 or so ... :)

best regards Dirk

# 5753. Need for a quick FAQ ?

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: bales@garonne.stortek.NOSPAM.com
Message-ID: <E7JnyM.53v@gazette.stortek.com>
Source record: 125206

Everyday seems to bring it's new bunch of newbies on this newsgroup asking the same old questions. I suggest compiling a quick FAQ giving pointers for most of these questions. The usual FAQs are a bit out of date, and a bit large for regular posting. This shorter version could be posted automatically once a week on the csas newsgroups.

Answers to the following questions could be:

1. Starting up on the Atari ST

1.1 What kind of machine is this ?
1.2 What kind of monitor can I use ?
1.3 Where can I get a boot disk for my ST ?
1.4 Can I run Atari ST software on my PC/Mac/Unix box ?
1.5 Where can I get the TOS ROM images ?

2. Software
2.1 Where can I get WareZ for the Atari ?
2.2 What are the main FTP sites ?
2.3 Is there an Atari dealer near where I live ?

2. Hardware Upgrades

2.1 How can I upgrade memory in my ST ?
2.2 How can I connect a hard disk drive to my ST ?
2.3 How can I upgrade my TOS version.

3. Connectivity

3.1 How can I transfer files between a PC and an ST ?
3.2 How can I hook up my ST to the Internet ?

A quick FAQ like this, with just pointers and quick answers could avoid half of the newbie questions we've seen these days.

Any opinions ?

Nicholas Bales, Toulouse, France

# 5754. MagiCMAC on a Mono Powerbook?

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: aa778@cleveland.Freenet.Edu
Message-ID: <5h5oqj$8ch@alexander.INS.CWRU.Edu>
Source record: 125207

Hi,

I am considering on purchasing a used Apple Powerbook
computer to run MagicMac for my portable computing needs. I
have two questions in regard to MagicMac. I am already running
Magic 5 on my TT030 so I don't have any software compatibility
type questions. The Powerbook I am interested in getting is a
model 165 with a 68030/33, 12 Meg RAM, 160 Meg hard drive,
and a monochrome LCD screen. From what I've read this sounds
like it will run MagicMac. My most important concern is the
monochrome display. Obviously color is ideal but the cost is out
of my reach at the current time. My major concern is how
MagicMac will run under a mono only screen. Can I run Atari
color modes at all or am I limited to Atari mono display modes?
If I can run pseudo color modes can I run color modes like
640x480x16 or 256 colors? Lastly and least important is if
anyone has an idea on performance compared to a standard ST
with the above machine? If it is pretty much equal to at least a
standard ST then I'm happy, but if it runs too slowly then please
let me know and I'll see if a faster used Powerbook is available.

Not entirely true: the Spectre GCR actually turns your ST into a FASTER
Mac Classic, and, moreover, with more pixels on a mono monitor than the
original!

Software emulation might be slow, but this is mostly the case when a
completely
different CPU is emulated in softare (like emulating the ST on a
Pentium, or a
Commodore 64 on an ST).

I found Spectre GCR running VERY smoothly on my ST.

NeoDesk's icon editor can also read .ICO files directly. But if you really
want them in .RSC format, this won't be of much help.

You will be limited to modes that your hardware will support, ie mono
in your case.

I run MagiCMac fine on a PowerBook, but mine is a 520 so supports 16
greys.

> performance compared to a standard ST with the above machine?
> If it is pretty much equal to at least a standard ST then I'm happy
Eh? Your 68030 pb will be much faster than a standard ST, which only
has 8MHz 68000.

Well, Cubase Audio Falcon works FX-Card and SpeedResolutionCard and it
should also work with NEMESES, I can't see why not.
Actually one is led to believe that Cubase Audio should run even better
with a NEMESIS than with the other accellerators, since NEMESIS has all these
good hardware error correcting modifications.

As far as I remeber Black Scorpion Software has tested the Nemesis with
Cubase Audio successfully.

Keep Cool and Flying...

> Does anybody has an idea
>where I could get a shareware or freeware
>midi sequencer????

In the UK a couple of years ago I found a program available in the
public domain called the Henry Cosh sequencer. It is 16 tracks and works
very well. It's a good one to start with since it is not overly complex
but has most of the facilities you will need.

It is available in the public domain (therefore free!)as a full working
version but you can register it for a small charge to get regular
upgrades/extra facilities etc.

Try this before you part with lots of cash!

Here is the final and complete list of atari bits and pieces to go to good homes. Sensible offers considered on everything.....

£ - UK pounds and includes postage & packing within UK. Elsewhere a little bit more to cover the stamps!

Fontkit plus 3 : £15
Script wordprocessor (MacWrite clone - uses signum fonts) : £25
Calligrapher Gold version : £35
Twilight screen saver package : £15
EasyDraw 2 plus HP laserjet 2 driver pack : £15
Imagecopy 4 with manuals : £20
Fonty (Calamus font editor) with manual : £15
Textstyle (produces bitmaps from vector fonts!) : £12
Vector X-change (converting between vector formats) : £12
X-boot (ultimate bootup prog) : £20
HDDriver (latest version) : £15
Extendos Pro 2.3 (CD rom drivers): £10
Selectric (registered) : £8
Outside 3.2 VMM (68030 only) : £25
Addrese (address gem prog - very nice) - registered : £8
2-in-1 (manages all compression utils in a shell) : £8
Gemspool (printer spooler) - registered : £8
NVDI3 100-font pack (TTF high quality typefaces on 5 disks) : £15
Everest editor (registered) : £8
Gemview (registered) : £10
breakthru 2 plus (32 channel midi sequencer) : £50 with adaptor

CD's
Bingo (german PD/shareware etc) : £10
Wow (similar) : £10
Gemini archive of michigan : £15
Suzy B's double CD treasure archives! : £20

Hardware etc
Vidi 12 ST colour digitiser for ataris : £30
SCSI external CD rom driver (apple mac - needs a scsi connection) : £75 + postage (its heavy!)

Hama trilock digital genlock unit (suitable for any computer inc. pc's etc.), new (cost £350) - only £230

Titan graffiti STE genlock unit - £100 with PSU

If interested in anything, send an email to spesgw@cf.ac.uk.

Regards,
Simon

# 5765. help:editing icons

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: Ken Macdonald <macdonald@cfcsc.dnd.ca>
Message-ID: <3336C40C.2BE9@cfcsc.dnd.ca>

I've been using RSC30.prg to open my deskicon.rsc(a copy actually) file and edit
the icons there, changing them to cic from mono and adding new effects!
But when I try to use the NEW deskicon.rsc all my files/folders only have 4 letter
names, i.e. rsc30.prg now shows up as rsc3. Show Info shows the whole file name.
Can anyone tell me what I've done, and how to fix it?
thanks.merci

# 5766. Re: Mega STE, 10 MB memory upgrade

Newsgroup: comp.sys.atari.st
Date: 1997-03-24 00:00:00 UTC
From: Frank_Szymanski@do2.maus.ruhr.de
Message-ID: <199703240127.a64586@do2.maus.de>
Source record: 125219

P> FS> Martin's RAM card does *not* use the VME slot, its internal.

P>which quoted a priced of 449DM, not the 149DM quoted by Jan !!

Sorry, but I can't believe its that cheap.

P>Die Mega STE-Version geht nur bis 10MB, weil darueber der Adressbereich
P>fuer den VME-Bus liegt. Sie wird vor dem Netzteil eingebaut, wodurch
P>der Platz fuer eine Buskarte nicht eingeschraenkt wird.

[translation attempt on]
The Mega STE version only uses 10MB because above there is the VME bus
memory area. The ramcard will be installed in front of the power supply
so the buscard is still usable.
[translation attempt off]

P>The problem with a FRAK is that it needs a PAK, which involves
P>considerable expense both to purchase and to fit (for additional
P>expense) into a Tower (additional expense) unless you have an external
P>power supply (messy).

O.K. But you don't have to buy everything at once. Start with a tower
case, then buy a PAK and so on...

P>Much rather have a TT and solve all problems at once B^{)

Hmm, or buy a Hades instead :-)

Tschuess
Frank

# 5770. 520 STE Memory Upgrade

Newsgroup: comp.sys.atari.st
Date: 1997-03-25 00:00:00 UTC
From: Mark Chamberlain <markachamberlain@unn.unisys.com>
Message-ID: <3337EFB8.6F61@unn.unisys.com>
Source record: 125073

Hi,

I've just dug out my old 520 STE for use with a MIDI sound module - it works fine except that on larger MIDI files I'm out of memory. I went and got myself a 1MB 30-pin SIMM, took the old 2 x 256K's out, put in the new 1MB chip, turned it on, and nothing happened except that a few green/black vertical lines on the screen appeared. I've lost my manuals, but am I right in thinking that the chips might have to be put in in matching banks of two's? (in which case I'll have to buy myself another meg).

Any help much appreciated,

Mark Chamberlain
markachamberlain@unn.unisys.com

# 5772. Re: Help, my ST has just died!!!

Newsgroup: comp.sys.atari.st
Date: 1997-03-25 00:00:00 UTC
From: dlormand@aztec.asu.edu
Message-ID: <5h92kr$n5u@news.asu.edu>
Source record: 125075

The first step I take when my STs misbehave is open it up,
reseat all the socketed chips (observing reasonable electrostatic
precautions), and try again. This has never failed except for
the one case where it was definitely the floppy drive that was bad,
which was proven by swapping in the drive from another system.

So my recommendation is:
1. Reseat all the socketed chips. Being reasonably careful.
2. If this fails, get hold of another floppy drive. Second drives
are often available here, and are useful things anyways.

Yep. But another simm!

Install your two simms in sockets 1 and 3 (counting from the rear of the
machine).

Hope this helps.

>for the PC other than a printer!

The parallel port is bi-directional, the problem is that it is missing
several of the non-essential handshake lines (things like paper out)
which are used by a lot of parallel port stuff like ethernet cards.
You can bodge a DLINK600 parallel port adaptor into the cartridge
port - MiNTnet comes with a driver for it....

Following For Sale:

SLM804 Atari Laser Printer, recently changed drum, works great!
Asking $100.

Sc1224 Atari Color Monitors, factory 'refurbished', original
box/docs. $55; Used, good condition. $45

SM124 Atari Monochrome Monitor, used, works great, original box.$50

PCM124 Atari PC Monitor, new, 9pin connector, original box, asking
$50.

***SCSI TOWER: 6 SCSI devices in all, wired together in one 'new'
tower case with power supply/fan. Has single 50 Pin connector on back
for ICD LINK 2 SCSI Adapter, included, with cable. Recently
constructed by Alex Yu at ATY Computers. Here's whats inside:
85MG Seagate HD, Sony CDU-541 CD Drive, ICD 155MB Tape Drive(5 extra
tapes + ICD backup software), 540MB FUJITSU HD(NEW), 50MG
Seagate(NEW), another 50MG Seagate.
***Tower will boot automatically to any ST/STE without internal hard
drive. Full instructions to install to a MEGA ST/STE/TT with internal
hard drive. ICD driver software and ExtenDOS PRO software included!
***ASKING $550

Printers: All used but in good working condition:
SG-10, 9pin,uses standard typewriter ribbons, color
ribbons included. Asking $35(includes owners manual)
Star NX-1001, 9pin, auto feed(can print on both sides of
paper) or tractor, like new in original box and owners manual.$60
Olivetti Ink Jet Printer, Model PR2300. Includes 20+ ink
jet cartridges and Axiom 32K Printer Buffer. $75

1040 STF's, 1MG, good, used condition. $65
Tested, no mouse.

Jaguar Game System with CD Player, 2 Controllers, Raiden, Highlander
CD, Braindead 13 CD, Tempest 2000 Soundtrack CD, Blue Lightening CD,
MYST DEMO CD, Vid Grid CD. Like new, all original packing/doc's.
Asking $150.

LYNK STUFF:
Lynx-NEW-includes 4 games-original box:$65
Lynx-Carry Case-NEW:$20
Lynx-Battery Pack-Portable-holds 6 D cells:$10(NEW)
Lynx-Comlynx cable:$5
Lynx-AC Adapter-$10

Lynx Games: Blockout-$5 Joust-$15
ALBERTT VIDEO CARD, for MEGA STE or TT. Display 1024x768, 16 colors from a palette of 4096. Dover Research. In box with driver software and install instructions. $125.

AEROCHOPPER Remote Control (R/C) Aircraft/Helicopter Flight Simulator/Trainer. Includes actual 'FUTABA' "CONQUEST" 4 Channel controller(just like the one you fly with!). Controller plugs into the cartridge slot on an Atari ST. Software, manual and original box included. Excellent Condition. Brilliant program for a 1 MG Atari. Asking $125.

Buyer pays shipping costs. Ship from New York, USA. US and Canada customers only, please!
software list to follow...

Source record: 125087

I have some ST stuff for sale (again).
I need to sell this and would liek to as a package. I just got some of this stuff, but I need to turn it around for various reasons, so here it is:

1040 STf
SC1224 Monitor (horizontal picture squeeze every now and then, nothing major, tap it and it goes away, or fix it permanently)
StereoTek 3D LCS glasses with some software
Supra44 rmovable drive with (7) 44 meg carts

everything works fine (the monitor noted)

will sell all for $150 plus shipping.
thanks
rhett

Hi All,

FUJIZONE; the central Web resource for Atari users, is now online at its new *permanent* url:

http://www.users.zetnet.co.uk/fujizone/

You may have visited Fujizone in the past, under its previous title of 'Atari Net Locator'. Please do visit us again to see the new, exciting changes and additions.

Just some of the great features of the Fujizone site are:

- A very large index of Atari links, in categories, with a description/mini-review for each link.

- FTP site and Usenet newsgroup listings.

- A contacts list, with 'mailto' links for many Atari people/organisations.

- News Bulletins/Press releases - all the latest news and updates from a variety of Atari organisations.

- Support for other Atari www sites, including development news and new sites announcements.

We hope you will visit Fujizone, and please register as a user with our simple registration form.

Page updated

In the very healthy looking download area I have Added FAQ section,
although linking to existing FAQ that some may be showing there age,

Added BACK issues info, you can now look up the index/contents files
from all the back issues that of course list every article found in
each ST+..Includes screen shots of each menu...as they are always
different....16 colour gifs so pretty fast page,

Back Issues should be available from a ftp site on this planet by
weekend :)

Cheers !ynoT ( ATARI Programmer )

I don't know if they are still in 2.10 I think you can ask Oregon
Research at orres@teleport.com.
I may be wrong in the following statemnts so please correct me if the
following are untrue.
More than 1024 files in a folder is actually a problem, there shouldn't
be this many file sin a single folder, I believe that having this many
can lead to data loss. If you mean th last 2 clusters of a disk then
this is probably due to the Falcon problem with TOS 4.01 where it
decides to write past the end of the disk and onto the Root partition of
the next disk and to help stop this it marks the end of the disk as bad.

bdc2@po.CWRU.Edu (Boris D. Cahan) inquired:

B > Are there any decent programs for recovery of damaged
B > floppies? That won't read when inserted? If so what are they
B > called, and where can I find them!

I found 'diskfix2.lzh' by damien f jones on the umich section of the
Atari Compendium CD. I have not tried it, but dmj does good STuff.
Give it a try.

Just above it (when sorted by name, of course) is Simon Poole's
'diskfix.arc'. Might try that too.

ant@dial.pipex.com (Anthony Richardson) asked (with pathos):

A > I have just tried to use my Atari 520 STFM and the disk drive
A > just keeps spinning and the GEM Desktop comes up without any
A > drives to click on etc. Everything else is okay. Is my
A > Diskdrive to blame or is the controller. I would be really
A > grateful if someone could help.

Try the drop test. Pick up the left side of the computer about six inches above a hard surface, and let go. If the problems change, re-seat the chips.

If you don't get a change on the drop test, try the wrack test. Pick up both sides and twist the computer. When I first tried this, I was advised not to wrack it more than about a quarter inch. I got results with somewhat more. If there is any change, re-seat the chips.

There's a program called ST TOOLS that's also good. It's probably in a archive around the net somewhere. BTW, I've been having the same problem lately....I think it's 'cause my drive is wrecking a sector. It seems always to be sector 11...which is a root directory..I check it on my other Atari. I've been unable to repair it so far.

Musically,
Terry Cano

That machine will definately run it! Just for comparison, I have a
Powerbook 145B ('030, 25Mhz, 8MB ram, 80mb HD, 640x400 monochrome) and
it seems to run very well (The docs benchmark this model specifically,
against a TT, and it was very close!). I dont use it all the time
however, I only run the demo version occasionally.

# 5795. HELP! With BigDOS and HDDriver 6.0

Newsgroup: comp.sys.atari.st
Date: 1997-03-25 00:00:00 UTC
From: death@fletch.fix.net
Message-ID: <5ha78e$mck@fletch.fix.net>
Source record: 125098

Okay, I recently purchased V6.0 of HDDriver in order to be able to use a ZIP drive and have the disks compatible with an IBM system. When I first installed the driver everything went haywire, but I eventually did get the software to work and recognize the driver... now I am trying to get BigDOS to work...

This is what I did:

I read the text file for BigDOS.
I transfered the program to my auto folder.
I rewrote the directory to have BigDOS load first.
I rebooted.
This is where the trouble started...
The computer boots, recognized HDDriver, then it bombs, resets and boots again in a never ending cycle.

I then went back to my HDDriver disk, held down the ALT key and brought up the atari desktop, put the disk in and ran the HDDriver .prg. The system froze. I did the whole thing over again and the system froze again. I then took out my old version of HDDriver and was able to load the program, install my logical drives and erase BigDOS.

So my question is: How do I get this software to work !?!?

I need this to work because I have to get some Calamus files to MGI for film output ASAP...

Please help!

Thanks!

> Hello?? how old is the atari???

Hello, Atari is about 20 years old I think , the ST is about 12 or so.

> The atari is dead !!! even the amiga!! there are only 2-3 active Amiga
> stores in Denmark (and they say the end is near!) so maybe you can
> imagine how many atari stores there are... (ehhhhh NONE!)

Are you reading the same goup as me? This "dead" platform generates
about a hundred postings a day and seeing as the ST is a low-end
computer then number of owners with Internet access is likely to be
lower. I bet you someone in Denmark will sell or get hold of stuff for
you if you bothered to look hard enough.

> If there are filled with atari shops in his/or your country/town then it
> is a cave because the pc market has taken over years ago.

A cave is a hollow in a rock or hillside, I live in a house which is
considerably different to a cave, I honestly have no idea what sort of
stupid point you are attempting to make.

> Do you know what a PC is??

Of course I do.

> or maybe such a device has not arrived in you town yet?? ohh let me
> know..

Plenty of them about thanks, nut I don't want or ned them, they have
absolutely no advantages over my current machine from what I can see.

They still have 'phones surely? Apparently they can even connect you to
other countries. You say that we live in caves and yet from what you
say Denmark doesn't even have an International post system!

> >> >> moron!
>

I just looked in the manual, it makes no mention of it needing colour
and says it will run "in the current Macintosh resolution". I thinky you
should be fine, I can't see any reason why it wouldn't work, normal Maca
apps have no problem using B&W instead of Colour there is no reason why
this should be different.

> My most important concern is the

> let me know and I'll see if a faster used Powerbook is available.

You must remember that MagisMac is an OPERATING SYSTEM and not an
Emulatotor as such. It should run at a fine speed as it doesn't have
the huge overheads that an emulator would have. IT should run at a much
faster rate than an ST. Oddly enough, although I've heared reports of
blazing speed ont he 680x0 machines my 200mhz PPC doesn't seem
particularly fast atall, it's quite a bit faster than an ST but nos as
fast as I expected, however I can't find any Benchmarks that want to
work.

I know what to do for most of it, but I need help on some weirder concepts...

If you CAN help me PLEASE email me so I know to come back to this newsgroup...

I am going to write a small auto folder .PRG that will install itself to run when the interrupt for MIDI IN port is generated... What I need this program to BASICly do is...

act as a MIDI THRU when I'm NOT running my music software.... In other words when I'm online w/ the computer and I wanna play my midi rig it'll be waiting in the background for MIDI port input... then it'll grab that vector and take the byte that's in the MIDI IN port and send it to the out unchanged... It's a TSR... I don't want an ACC...
Also I'd like a hot key combo to make it go DORMANT (set vector back to normal) and watch they keyboard for the hotkey combo again to come back to ACTIVE...

I need to know if it's is possible to READ the MIDI in port WITHOUT clearing the byte read? So that after I run my THRU routine I can branch back to the system's routine... Or would it be more wise to just use my own routine all together?

Also in GFA manuals it CLAIMS that you can NOT use pterm resident... Is this due to the effect that it woud have on the interpreter? I mean if I wrote the program WITH the pterm res call in it... and did NOT run it from WITHIN the Intrpreter, but compiled it instead... Would it work then? or do you know if the compiler would filter out the pterm res command when it did it's thingy?

Also I need clarification on the whole cookie thingy... The one in the basepage... Do I set that when I install my prog? And it's 8 bytes right? 4 for ident and 4 for address right? and the first four are for WHAT? and the second four is WHAT address? The original address that the vector I robbed points to? If my prog were to crash would TOS take that address and poke it back into the vector I robbed?

(here I catch my breath...)

Thanks,

Luke.

I have some space on my Delphi provider. I'd be happy to post some
info as well as maintain the most current issue of ST+ Diskmagazine.
Let me know if this will be of any help.

# 5807. WTB hard drive/Link for STE

Newsgroup: comp.sys.atari.st
Date: 1997-03-25 00:00:00 UTC
From: John Hechtman <johnhechtman@delphi.com>
Message-ID: <pLG47M3.johnhechtman@delphi.com>
Source record: 125155

A friend of mine is looking for a hard drive for his 1040STE setup. Since he has the STE, he'll need a Link 1 or 2, or another type of SCSI adaptor to use SCSI drives. I'm trying to set him up with a 80-120 meg hard drive and some type of adaptor. Why SCSI? Because then he can also use CD-ROM, EZ135 drives and other SCSI devices. IF you have a suitable unit for him, please email me - johnhechtman@delphi.com. Thanks!

# 5808. Re: ATARI 286/30 does not boot from HD st225.

Source record: 125156

Hmmm,

Its been a while. The MFM controller may be going, but its more likely that the HD is dying is mis-configured. You may want to consider taking whatever data you can off of the HD onto floppies and booting up from A:, FDISKing and FORMATTING the HD fresh again.

It inexpensive enough, you could always buy an IDE controller and a 40MB IDE hard drive for about 40-50 bucks and go that route. I ended up removing the Atari motherboard and replacing it with an Intel 486 PCI motherboard with AMD 133Mhz CPU. It fits perfect in any of the PC-2 to PC-5 cases and then you get onboard parallel, serial, 2 IDE Hard drive controllers, floppy controller and a hell of a speed boost. I picked the motherboard and chip up at a computer show for $89, you can get 486 DX66 motherboards for $65 if you really want.

Something to consider, and man does GEM fly with a 133mhz chip!!!!

Well, I can tell you, but you may not like it much. :) I use G++ (GNU C++), which really likes lots of memory. However, if this does not deter you, use it. I like it, but it has it's set up grief. If you go this way, and you need help, let me know. perhaps I can help you.

## 1. Starting up on the Atari ST

### 1.1 What kind of machine is this ?

The Atari ST range is a 16/32 bit Motorola 68000 based personal computer range started in the mid 80's. Here are some generic specs. Some models differ from these specs, so check the list below

Processor
Motorola 68000 (68030 on TT and Falcon) processor at 8Mhz (16 on MegaSTE
and Falcon, 32 on TT030)

Screen Resolutions:
High: 640x400/Monochrome on dedicated monitor,
Medium: 640x200/4 colours on colour monitor or TV,
Low: 320x200/16 colours on colour monitor or TV,
512 colour palette (4096 on STE, MegaSTE, TT)
Other resolutions are available on MegaSTE, TT, and Falcon computers.

Ports:
Cartridge, Midi In, Midi out, Parallel, Serial, Monitor, Disk Drive,
ACSI (proprietary hard drive), TV (on RF equipped models), RCA sound
(from STE on), Joystick/Mouse, SCSI (Falcon only)

Models:
Name Speed RAM T TOS Floppy MBESVKTC Comment
---
130 ST 8 128Kb D 1.0 Ext. Never marketed
260 ST 8 256Kb D 1.0 Ext. Very few made
520 ST 8 512Kb D 1.0 Ext. TOS on disk on earlier models
1040 ST 8 1Mb D 1.0 Ext. TOS on disk on earlier models
520 STf 8 512Kb D 1.2 360Kb
1040 STf 8 1Mb D 1.2 720Kb
520 STfm 8 512Kb D 1.2 360Kb M
1040 STfm 8 1Mb D 1.2 720Kb M
MegaST 1 8 1Mb D 1.2 720Kb B S KT Pizza box
MegaST 2 8 2Mb D 1.2 720Kb B S KT Pizza box
MegaST 4 8 4Mb D 1.2 720Kb B S KT Pizza box
STacy 8 2/4Mb D 1.4 720Kb B Portable ST
STBook 8 1-4Mb D 2.06 720Kb B Notebook, Very few made
520 STe 8 512Kb S 1.62 720Kb MBE
1040 STe 8 1Mb S 1.62 720Kb MBE
Mega STe 16 1-4Mb S 2.06 1.44Mb MBE VKTC TT style case.
TT030 32/030 2,4Mb S 3.06 1.44Mb BE VKTC Various mem/HD configs
Falcon 16/030 1-14Mb P 4.04 1.44Mb BE TC Many enhancements
---
T=RAM type (D:DRAM/S:SIMM/P:Proprietary memory board)

M=RF Modulator
B=Blitter chip
E=Enhanced 8bit DMA stereo sound, 4096 colour palette, hardware scrolling,
analog joystick ports
S=MegaBus processor direct bus slots
V=6U VME bus slot
K=Detached keyboard design
T=Internal time/date clock
C=68882 Math co-processor

1.2 What kind of monitor can I use ?
---

### 1.2.1 Connecting to a TV Set

STFM and later models were equipped with an RF Modulator allowing them to be connected to a TV's antenna connector. You then need to tune into the correct channel on the TV to get the ST picture.

In some countries, Atari shipped machines with a SCART/Peritel cable that plugs into the monitor port instead of the RF Modulator. In this case you need the adequate cable and a SCART/Peritel equipped TV set.

A TV will only display in low or medium resolution modes.

### 1.2.2 Atari Monitors

Monochrome (640x400 colours) requires a special Atari high resolution monitor (SM models). These monitors have a very stable paper white display. SM monitors can only display monochrome mode.

Medium Res. (640x200/4 colours) and Low Res (320x200/16 colours) need a colour monitor (SC series) or a TV.

If you want to display all screen resolutions you need both types of monitors.

### 1.2.3 Connecting a VGA/SVGA or multiscan monitor

(to be completed)

## 1.3 Where can I get a boot disk for my ST ?

### 1.3.1 Booting without a disk

First of all, Atari models with TOS in ROM don't need a boot disk.
If you do not have a correctly formatted double density disk to boot from, just wait a few minutes for the desktop to come up on it's own, then format a disk using the menu option.

If the desktop screen doesn't come up after more than 5 minutes, your ST is probably broken.

### 1.3.2 Atari Language disks

Depending on the ST version you have, a language disk was supplied with some basic software, mainly:

CONTROL.ACC The control panel desk accessory. Later replaced by XCONTROL.ACC
XCONTROL.ACC A modular control panel. Uses CPX files.
STBASIC.PRG A very buggy Basic interpreter. Later replaced by Omikron basic
LOGO.PRG An old Logo interpreter.

Very few of the program supplied on these disks were of any use. Better quality
public domain or shareware replacements can be found on most FTP servers (see section 2.2)

1.4 Can I run Atari ST software on my PC/Mac/Unix box ?
---

You need a program which fools your computer into running Atari ST programs.
This is called an emulator. There are plenty of them available on the
Internet.

Here are some good net resources for Atari emulator software:
http://www.nfinity.com/~swhalen/node99/st.html
http://www.emulators.com/

1.5 Where can I get those TOS ROM images ?
---

TOS is the ST's operating system. It was supplied on ROM with most STs. Some
emulators need an image of these ROMs in order to run.

However, TOS is copyrighted software and the distribution rights belong
to Atari. Neither Atari nor JTS (the company who now owns Atari) has stated
that any version of TOS can be freely distributed and used. Distributing it
without a licence is therefore software piracy, which is illegal and enforced
everywhere.

Asking for pirated software is also illegal.

Owners of a real ST can use a program called TOSDUMP.PRG to make a TOS image
for their own use. This is considered legal as long as the image is not
distributed and you own a legal copy of the program (ie: the ROMs).

Illegal copies of TOS images can be found on the net. Please note that
using them is illegal, and asking for them in the newsgroups is against the
charter and will cost you lots of flames and trouble.

2. Software
==========

2.1 Where can I get WareZ for the Atari ?
---

Software piracy is an illegal activity. Participating and promoting it is
considered an offense on most newsgroups, and on comp.sys.atari.st members
are particularly strong in opposing it.

If you still wish to ask for pirated software,do so at you're own risk,
but be aware that you will receive flames, complaints to your domain
administrator and maybe more trouble.

See also section 1.5 on TOS ROMs

2.2 What are the main FTP sites ?
---

A complete list of FTP sites can be found at:
ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt

Here are web interfaces to 3 of the most active atari FTP archives:

http://www.cnam.fr/Comp/Atari/Index.html
http://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html
http://www.umich.edu/~archive/atari/

### 2.3 Is there an Atari dealer near where I live ?

(to be completed)

### 2.4 Is there a DOOM clone for Atari ?

(to be completed)

## 2. Hardware Upgrades

### 2.1 How can I upgrade memory in my ST ?

#### 2.1.1 Expanding SIMM equipped models

If your ST is equipped with SIMM memory, you can easily upgrade your memory to 1, 2 or 4Mb by just taking out the old SIMMs and popping in the new ones.

The correct memory type is 30 pin SIMMs, minimum speed 120ns, with or without parity, 256Kb or 1Mb. It is best not to mix different SIMM types.

Atari STEs are originally equipped with either 2 or 4 256Kb SIMMs (512 or 1024 Kb)

Original STs, Mega STs and STEs can only deal with 4Mb. To go beyond that limit, you need a special expansion board.

#### 2.1.2 Expanding DRAM equipped models

(to be completed)

### 2.2 How can I connect a hard disk drive to my ST ?

#### 2.2.1 Atari Megafile hard drives.

These were proprietary hard disk drives designed by Atari for the ST. They were available in 40 and 60Mb versions. These are the only hard disk drives that are directly compatible with the Atari ACSI port on original STs.

#### 2.2.2 SCSI hard drives

In order to use these, you need a SCSI Host adapter that connects the SCSI drive to the ACSI hard drive port on the Atari. There are several models available depending on whether or not you need parity, whether or not they are for external or internal drives.

#### 2.2.3 IDE hard drives

(To be completed)

2.2.4 ZIPs, CDROMs, Syquest drives

These have to be SCSI models and use a host adapter described in 2.2.2.
Parallel port peripherals cannot be used an any ST because Parallel
port communication was not fully implemented by Atari.

2.3 Upgrading your TOS version.
---

(to be completed)

2.4 Adding an accelarator board.
---

(to be completed)

3. Connectivity
==========

3.1 How can I transfer files between an ST and another computer ?
---

3.1.1 Exchanging TOS and MS-DOS disks

The TOS disk format is DOS compatible. This means that any 720Kb double sided
double density disk from a PC can be read on an ST and vice versa.

There are several limits however:

-Older TOS versions (before 1.4) do not format disks exactly the same way
as MS-DOS, so for these models, you might try formatting the disk on a PC.

-Some old 520ST, STF and STFM models use 360Kb single sided drives which are
not compatible with most newer 1.44Mb PC models. You must either get a DS
drive for the ST or find a PC that is able to read the old single sided disks.

-Windows 95 uses long filenames and seems to sometimes corrupt disks, so be
sure to use the 8+3 standard DOS format.

3.1.2 Exchanging TOS and Macintosh disks

TOS is not compatible with macintosh disk format. However Macs are supplied
with a system extension that allows read/write of MS-DOS disks which are
compatible with TOS. See 3.1.1 for more details.

3.1.3 Serial port file transfer

Another way of exchanging files between ST and PC is to use the serial port
with a null modem cable. You need some special software to do this. This can
be found at your favourite FTP site (see section 2.2)

3.2 How can I hook up my ST to the Internet ?
---

The ST can be used to send and receive email, read usenet newsgroups, download from FTP archives, and even to surf the web.

There is a whole lot of internet resources on the subject:

The Atari Internet guide
http://zippy.spods.dcs.kcl.ac.uk/~garfield/aig/aig.htm

The STiK support page
http://www.flinny.demon.co.uk/

### 3.3 Where are the Atari Web Pages ?

Atari's official webpage is for Jaguar support only:
http://www.atari.com

Here are the most useful pages for ST owners:
http://home.sn.no/~hallvart/pages/atari.html

(To be completed)

## CREDITS

(To be completed)

# 5811. TapeDrive & HardDrives for sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-25 00:00:00 UTC
From: apalmer@zapcom.net
Message-ID: <5h87qc$ml1$1@ultra.sonic.net>
Source record: 125159

I have the following for sale:

ICD Tape Drive - This was purchased from ICD and includes
case, host adapter, and Teac tape drive. The case has ACSI in
and out plus SCSI out. It comes with a 3 foot Atari cable.
The case measures 11" x 11" x 2.75". There is room for a SCSI
drive in the case and the P/S has the needed connector. The tape
drive will back up 155megs in about 20 minutes. This also
included ICD software for the tape and host adapter. - $180

330Meg Hard Drive - This is a CDC 94171-9. The drive comes in
a case and included a standard SCSI cable. This can be
plugged into the back of the ICD or used with any host
adapter. - $90

213Meg Hard Drive only - This is a Maxtor LXT213SY. - $60

80Meg Hard Drive only - This is a Quantum P80S. - $30

The drives all format and work fine. I upgraded to larger
drives and no longer need them. I would like to sell these in
the bay area, but will ship COD to the US. I can be contacted
through e-mail.

# 5812. Re: MagiCMAC on a Mono Powerbook?

Newsgroup: comp.sys.atari.st
Date: 1997-03-25 00:00:00 UTC
From: Karsten Reincke <kreincke@cl-ki.uni-osnabrueck.de>
Message-ID: <5h88s2$ca9@deimos.rz.Uni-Osnabrueck.DE>
Source record: 125160

I'm using a PowerBook, which offers 4 shades of grey on the MAC-Side. Now, I can't use these 'colours' on the MagiC-Mac side, because this mode won't be aided. So, I must use MagiC-Mac in the black-and-white mode. And therefore:
(A) All programs, which can be started on ATARI with SM124-Screen can be started on MagiC-MAC. (And they do their job very fine, even they are very dirty programs)
(B) None program can be started, which demands a colour-screen.

If I'm wrong, I'll learn by your question.

Thanks :) as I think you have seen from later posts I managed to get
a free site at geocities, the ST+ page is up and running, two days of
very hard slog with notepad (all done by hand)

If you will have a look and add the site to your list that I know you
are compiling, you will see that although its the ST+ Diskmag page, it
is also a central point for downloading all ATARI diskmagazines, and
growing :)

Thanks for your offer though :)

Cheers !ynoT ( ATARI Programmer )

I have to say wo that I have noticed a marked decrease in spam since
removing my email from the headers, yes yes I know they can still get
it from the sig,
I only take around 5 newsgroups total, I now get maybe one spam per
week, sometimes 2, but before I was getting that a day at least,

My "personal email" count is normally around 30-40 emails per day,
(thats why i cant handle too many newsgroups<g>) so I dont think it
puts too many off?

try KnifeST. where to find it? I don't know (offhand)
If you have Diamond Edge2, then use DADE

wELL! :^)
This sounds exactly like what happens when my Atari SLM804 is not turned
on when I boot my Mega - nothin'
Hard to say what it would be in your case however.
sounds internal, sounds like hardware.
doesn't sound like the floppy drive, doesn't sound like software.
not much help, eh?

> > I would be really grateful if someone could help.
> > Cheers
> > Ant.

Do you hear transient noise from the disk drive, while the machine comes up, like the read/write head moving ? Surprisingly, maybe, in that case a damage of the drive is more likely. If the drive just spins, then it's worth to check the controllers. If you got a second ST, try to swap the DMA controllers, they sit in 40 pin sockets close to the DMA (ACSI) port. If that doesn't help, a faulty floppy controller could be the reason, which is bad because it is soldered in. Another possibility is the sound chip, which sometimes sits in sockets too, so maybe you can swap that one as well. It's 40 pin too, with either a Yamaha or General Instruments logo on top.

Cheers Peter

Hello,

FIRST, I want to express my respect to people like you all, who can
'talk' on the news, and even argue, while remaining correct. I don't
know if I made myself well understood, but then go to fr.comp.sys.atari
and you will understand what I mean...
They behave like children (many of them, anyway).

What I wanted to say is : Mint Is Not Tifficult at all. I installed it
without hurt. I just unpacked some files about mintnp.prg, .cnf and
gem.sys. That's about all. It works well, even if I still don't have
mintshel.

Thanks to all for tips and tricks and sites. Bye.

: Tell me more, Leslie. My son and I are starting a major project here
: which will involve compiling for the PC, Mac, ST and possibly Amiga, and
: it looks like C++ is the best choice for cross-platform compatability.

: Primarily, what's the best ftp site to get ALL of the needed files in
: one trip - and what header files will I have to go hunt down and kill
: before I bring them home?

If you like, I can archive my system (the last version of G++ that does not require the use of MiNT), and set it somewhere for you to download. C++ IS the best way to maintain cross platform compatibility in my opinion, although C++ tends to make the compiled programs much larger. Anyway, my system is already set up, and works. All you would have to do is change the drive letters et al in the environment variables to get it working for you. I also think I have lots of documentation for it.

Note: I do not use the latest version of G++. I wanted to be able to use it under MagiC, and later versions require MiNT. If you want to set up the version I'm using or later without getting it from me, you should be able to find all of the files you need at umich.edu or cnam.fr.

# 5837. Quick FAQ - Draft 0.1

Newsgroup: comp.sys.atari.st
Date: 1997-03-26 00:00:00 UTC
From: tom.derrick@acpu.com
Message-ID: <859404338@acpu.com>
Source record: 125035

This looks like excellent work! I don't wish to be critical, but I
call your attention to a few (minor) errors:

B > Screen Resolutions:
B > High: 640x400/Monochrome on dedicated monitor,
B > Medium: 640x200/4 colours on colour monitor or TV,
B > Low: 320x200/16 colours on colour monitor or TV,
B > 512 colour palette (4096 on STE, MegaSTE, TT)
B > Other resolutions are available on MegaSTE, TT, and Falcon comp

The box-stock MegaSTe has only the standard ST resolutions, afaik.

B > If you want to display all screen resolutions you need both
B > types of monitors.

See Rich's 'multisync faq'

B >1.2.3 Connecting a VGA/SVGA or multiscan monitor

B > 2.2.1 Atari Megafile hard drives. These were proprietary hard
B > disk drives designed by Atari for the ST. They were available
B > in 40 and 60Mb versions.

Also Megafile 30, and I believe the SH204 was a 20Mb.

B > 3.1.3 Serial port file transfer Another way of exchanging
B > files between ST and PC is to use the serial port with a null
B > modem cable. You need some special software to do this.

I have not tried this, but a terminal prg on each end should work.

All in all, a superb v0.1!

>> system. So in effect you are saying MagiC cannot multitask!
>
>I don't think I am! Then again, I don't understand what you are saying
>either.

Hehe! It's not too clear is it?

In a back to front way I was saying that MagiC does not multitask when
the processor is in Supervisor state.

With any program that uses dialogue boxes for displaying information
there is no way of telling if some other program has scribbled over
the area of screen used to display it, so the only solution is to
"lock out" all other programs. The other programs still multitask
quite happily but only until they try and display something - at which
time, MagiC can do nothing else except suspend them. When the dialogue
box is removed, they start running again. This'll be what is happening
with Lattice.

I got mail-bombed too, although I was not astute enough to determine
the source. I did notice 'li.net' in the header, which seems to
confirm my suspicions. He sent 1000 exceptionally poor (and
frequently obscene) 'jokes'. Talk about ***lame***!

It gave me an excellent opportunity to try out Mountain Reader's
twit list. Works like a champ. I am always grateful for a learning
opportunity :)

Yes, you could use it with STe, you just need the cable adaptor.

Why not just get the Mega STe fixed?

# 5846. Syquest Syjet on Atari

Newsgroup: comp.sys.atari.st
Date: 1997-03-26 00:00:00 UTC
From: S.Cornio@mail.wdn.com
Message-ID: <33389567.10080220@news2.cais.com>
Source record: 125044

I recently purchased the new Syquest Syjet 1.5 GB removable cartridge drive to use with my Falcon030. I bought the internal SCSI PC version of this drive. Assuming that you already have a SCSI host adaptor, which the Falcon has built in, and an empty drive bay, this drive is a snap to install. It comes configured as SCSI id 4 but is easily modified to be any SCSI id from 0 to 7. I installed the drive in the same case as a 2 GB Seagate drive. The supplied cartridge formatted easily using either ICD Pro 6.5.5 or HDDRIVER 6. Each cartridge has 2929800 sectors which equals 1.5 billion bytes. HDDRIVER indicates that the cartridge has 1430 MB. Using RATEHD, the drive was rated at 1351 KB per second and an average of 17 ms access. This compares with 1428 KB/second and 17 ms access for my internal 512 MB Toshiba IDE and 1418 KB/second and 10 ms access for the 2 GB Seagate SCSI.

>More than 1024 files in a folder is actually a problem, there shouldn't
>be this many file sin a single folder, I believe that having this many
>can lead to data loss.

Not really, I have here a folder with unsorted soundtracker MODules
which contains 1389 files, 0 folders and 172691803 bytes (164.7 Mbytes)
and have no problems with it. Just that Selectric needs something like 128
Kb free memory to display this... If I remember correctly I had once a
folder with about 2600 files without problems. I agree that the wise guy
should avoid such things, but...

BTW, I wrote that DE 1.10 limit was 1024 files, but I not so sure now.
Can't remember, it's perhaps only 512... yes, I'm nearly sure it's 512.

>If you mean th last 2 clusters of a disk then this is probably due to the
>Falcon problem with TOS 4.01 where it decides to write past the end of
>the disk and onto the Root partition of the next disk and to help stop
>this it marks the end of the disk as bad.

Not really, it's related with this problem, but DE doesn't mark the
last clusters as bad (It would be useless anyway, Falcon 4.02 gemdos
writes on these (1 or 2 last) clusters *even* if they are bad), it cuts
out the end of the file. But this file was not corrupted at all, you could
"save" it simply by copying it anywhere else with Kobold, or many other
ways.

BTW this whole big "last clusters" problem is not only with Falcons,
the "write end of file on beginning of next partition" syndrom is only a
side effect of a gemdos or bios-Rwabs bug dated from TOS 1.0... Remember
the 360 or 720 Kb floppys with 2 Kb less than on a PC? Yes, the 2 last
clusters... But I don't really understand all this, surely some well known
here disc experts could explain us the whole story?

Bye! Bruno.

> article.

This one has been in INN for a while.

I can see someone like a university might want it because a) there is no
good reason why anyone should want an offline reader if they're connected
permanently, and b) if people take a suck feed they'll probably take more
groups than they actually need, and so waste bandwidth.

However, I can think of no excuse for any ISP to have this as DONT,
particularly in countries where people pay for phone calls.

Apparently, using article numbers instead of message IDs gets round this;
but, now there are programs like suck to get a suck feed using article
numbers, new versions of INN may fix this loophole.

be available.

>about. i also need info on paralell port ethernet adapters
>for ibm or win95, does anyone have any drivers or anything for atari?

I would say not. The parallel port Ether adapters for the PC rely on a
number of control lines that simply don't exist in the ST series (and
obviously aren't needed for controlling a printer, since all printers
I've ever hear of work fine with an ST).

rbell@uniserve.com

# 5859. Question about 50/60 hz rate in PacifiST...

Newsgroup: comp.sys.atari.st
Date: 1997-03-26 00:00:00 UTC
From: nhaas@one.net
Message-ID: <5ha3r5$m04@news.one.net>
Source record: 125106

I remember some software on the ST a long time ago (mostly stuff from Europe) required you to shift the display from 60hz to 50hz in order for the software to run.. Is this still the case with emulators such as PacifiST?? If so, where do I get a hz rate switcher??

One of the problems I am having is, I downloaded this demo from The Lost Boys, one of their first ones, and it was posted on a site of known compatible PacifiST software.. Well teh first screen works OK, but when I press 'space' for the rest of the demo, it goes back to TOS. This reminded me of similar problems back in the 50/60hz days..

Any info would be appreciated...

Nick

Daron,

I corresponded with you last year about getting Oasis to work for me on CIS and never had any luck... could the "new" ppp standard be the reason?

If so, I'd LOVE some info on who to make a check out to (and for how much in american dollars... if possible) when the fix becomes available. I'm in serious need of a good browser for the ST and am not happy with the choices I've seen.

I'd really like to do a review of the 'fixed' product when it's available. Who should I talk to about that? Names/email addresses would be appreciated.

Thanks a bunch,

Hey man , why are you trying to format a scuzzzy drive they're factory
formatted
and the only thing you've got to do is partitionning (?) since you just
can't format them
(what the drivers call formatting is usually checking for bad sectors ...)
this is also true for IDE drives ( recent ones i mean ...) ICD PRO is still
the best driver
i ever had ....

# 5862. Re: GFA 3.5 / TSR / pterm res

Newsgroup: comp.sys.atari.st

Use the force luke ! :))
There are really many times since i didn't wrote anything in GFA 3 , which i think
is a very good language however ... so i can't explain if you can do exactly what you want 100% in gfa ...you will probably have to include some assembly code in...
First remark : the cooky jar is not the way to 'hijack' a system vector , i think you want to talk about XBRA don't you? It works quite simply you just have to store the
old pointer forwarded by an ascii "XBRA" and an ascii "XXXX" where XXXX is the id
name you want to give it ... and your code following ... Don't know how GFA deals with this but it's the clean way ...
However the TOS is not capable of retrieving the vector if something crashes so it is
not very useful but it is 'fair coding' ...
Second remark: you can't read the in byte without clearing it due to the ACIA hardware , so i think the best solution for you is to fake calling the MIDI vector of
the system forcing it to come back to yours and then grab the byte in the system buffer ... To fake the call you 'just' have to push the pc you wan't to force the system to come back to , push the sr (i mean putting them to the stack) and jump into the
old vector ,his RTE will come back to your routine (hopefully) Note: if you've got a 68030 processor you must push a clear word before all (clr.w -(sp)) because of the stack frame format needed on the '30..
Again i really don't know if it will be possible using pure GFA....
I Hope for you it will , cause it's a pretty good idea .....
I MEAN A SOFTWARE GOOD IDEA , because it's naturally simpler to get a midi THRU cable ..... :)))

Do you know there is a pretty good accelerator board here in france ....
(not so far now with 'le shuttle' ) ...
If you're affraid to know wether it will work or not on your falcon i can
say there is only 2 or 3 falcons in france that did refuse to work with it
.. but we sold several
hundreds of them so you can find almost everywhere in france somebody with
a falcon accelerated with a CENTURBO 1 ( the marvellous one ) ..
some specs: 25 Mhz for the '30 and the bus 50Mhz for the DSP and FPU and
VIDEL (internal) so that you can reach 896*672 truecolor on a good
multisync'
i don't exactly know what the price is in ukp but it is 890 FF taxes
INcluded ...
i believe this is approx. 160 US$ but in france the tax rate is 20% so you
have to
take them out of the price because we must sell it free-tax in other
countries...

Following Software Titles For Sale:

Atari CD Master/Audio Cd Master 4
includes following drivers:
INFOPEDIA v2.0, TIME Almanac 90's, Time Almanac 95, UFO 1 & UFO 2,
Space Missions, 1995 Auto Almanac, MPC Wizard v2.0
includes following CD's:
Time Almanac 90's, Time 95 Almanac, UFO 2, Space Missions, MPC Wizard
v2.0, INFOPEDIA v2.0. Above can be used with a MEGA STE or TT with
appropriate video card(Crazy DoTTs, NOVA). Asking $125 for the lot!

SARA CD Driver for Grolier's CD Release 6, CD included: SOLD

ST FORMAT MAGAZINES. August '95 thru September '96(final issue).
Includes 'cover disks' and 'wonder disks' for all issues, 14 issues in
all, 28 floppies, asking $100.(some floppies still in seal wrap)

ST Informer Magazine, May '96 with welcome Disk and PD disk #97. $5

Productivity software: Original boxes and doc's included:

X-BOOT v 3.10: $10
UltraScript-2disks-by Atari for MEGA's:$5
PhotoShow STE v2.3 w/ Photokina Portfolio Player CD-It's All

You are correct, Sir! SIMMs in any 16-bit computer worthy of the name
must be installed in pairs. In your case, 4 at a time would be
reasonable.

See email regarding other things you may want to know.

Tell me more, Leslie. My son and I are starting a major project here
which will involve compiling for the PC, Mac, ST and possibly Amiga, and
it looks like C++ is the best choice for cross-platform compatability.

Primarily, what's the best ftp site to get ALL of the needed files in
one trip - and what header files will I have to go hunt down and kill
before I bring them home?

Centek wrote:

> (what the drivers call formatting is usually checking for bad sectors ...)

This is wrong. When formatting a SCSI drive on the Atari using e.g. HDX, SCSITOOL or HDDRUTIL (->HDDRIVER) the drive IS formatted. The bad sector check is done after formatting is finished. If the sector test fails SCSITOOL and HDDRUTIL provide for formatting the drive again. In this case the bad sector list is optionally transferred to the hard disk controller. This way the controller can format the drive once again with regard to the information in the bad sector list.

: Hey man , why are you trying to format a scuzzzy drive they're factory
: formatted and the only thing you've got to do is partitionning (?) since
: you just can't format them

Sounds like you're confusing low level formatting with high level
formatting. I confused the two for awhile til I got technical with some
people, and read more stuff. The formatting done to a SCSI (scuzzzy?)
drive is a high-level format, which clears all the sectors. True, they're
factory formatted, which means they're set up for that particular model,
and low-leveled at the same time. Then once you format, you partition.

The other interesting thing is that it's the other way around in the IBM
world. You partition then format each partition, meaning FDISK and FORMAT.

: (what the drivers call formatting is usually checking for bad sectors ...)

It depends on the software you use. I'm not that familiar with HD Driver,
a little with ACSI. ICD first formats, then partitions, checking for bad
sectors before it partitions. It takes time.

: this is also true for IDE drives ( recent ones i mean ...) ICD PRO is still
: the best driver i ever had ....

Most all drives have to be formatted and partitioned, no matter what kind
they are, be them RLL, MFM, SASI, SCSI, IDE, EIDE, ESDI, whatever. But of
course, ICD's drivers have been pretty reliable for me. I got one that's
been on and running 24/7 since about 1990. It's had several hard drives on
it, with a Seagate ST41200N on it presently.

However, I would *LOVE* to own one of them Seagate ST410800N 9 gig
suckers. Have you seen how big and heavy these puppies are? Imagine the
time it would take to format and partition that huge beast! A few years
ago, it went for a little over $5,000. Today, you can get a new one for
close to around $1200, and they're falling every month. Prolly won't be
long before I'm able to nail me down one! [weird maniacal laff]

Carina BBS the Best, Most Powerful BBS software for any 8bit computer!? I don't know where that came from, but the last time I saw Carina it was written in Basic and didn't impress me that much. (Granted it was an older version) But still BBS PRO! without a shadow of a doubt is the mos powerful 8bit BBS program in terms of baud rate, emulation support, networking, msg base processor and file processor, and online game support. What does Carina do that BBS PRO! can'T?

BTW you may think I own or run BBS PRO!.. no I actually was an 8bit sysop using OASIS 4.7 a few years ago.

Alan

# 5879. Atari / Lynx / Gameboy (and books) for sale

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.032797.182119.98@wxs8-16.worldaccess.nl>
Source record: 124976

This is the March 16th version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

---

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
+Arkanoid (Imagine/Ocean) (SOLD)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
+Bubble Bobble (disk will handled, was my absolute fave game) (SOLD)
Centipede (the Sinister Developments version) (SOLD)
+Chaos Engine (2 disks, disks patched for use on Falcon, can't press any keys
until the game starts or it won't work; don't know if it still works on the ST)
(SOLD)
Deep Space (2 disks, Psygnosis)
Defender II (ARC/Atari, by Jeff Minter, classic game, but difficult to play)
(SOLD)
Dragonflight (Thalion, 2 disks, double-sided drive required) (SOLD)
+Dungeon Master (SOLD)
+Enchanted Land (Thalion) (SOLD)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Gods (superb game, two disks, by Bitmap Brothers)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
+Gridrunner by Llamasoft, excellent game by Jeff Minter (SOLD)
Hitchhiker's Guide to the Galaxy, the original Infocom adventure (alas, no
gadgets anymore, I lost 'em all) (SOLD)
Jambala, the Seven Gates of (Thalion, DS disk version)
+James Pond (by Steve Bak, Millenium Software, preview copy, but is a full one)
(SOLD)

Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect printer to
get it to work, does not work on Falcon, alas)
+Lemmings (need I say more?) (SOLD)
+Oh No! More Lemmings (totally addictive) (SOLD)
+Lemmings 2 (more addiction) (SOLD)
+Lethal XCess (absolutely great shoot-em-up from the author of Wings of Death, by Eclipse, 2 disks)
+Little Computer People (Activision, really cute game) (SOLD)
+Magic Pockets (great Bitmap Brothers game, one disk)
Monster Business (platform game, Eclipse design)
+Nebulus (by John Phillips, excellent game) (SOLD)
+Obliterator (2 disks, Psygnosis)
Photon Storm (hellishly difficult Jeff Minter game) (SOLD)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
+Rick Dangerous (pre-prod copy, looks dodgy but is full version, and legal too. Heavily used, was one of my fave games)
+Rick Dangerous II (also a fave!) (SOLD)
The Sentinel (legendary Firebird game with 10000 levels or whatever) (SOLD)
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
Starglider (the legendary Jez San game!)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE FORMAT, WORKS ON ST AS WELL AS AMIGA!!)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Virus (legendary David Braben 3D game, by Firebird, doesn't work on all disk drives (sometimes you have to press the 'eject' button lightly) (SOLD)
+Warhawk (budgetware shoot-em-up by Silverbird, with Rob Hubbard music)
+War in Middle Earth (RPG "Lord of the Rings", *really* impressive, 3 disks, Melbourne House)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)
+Wings of Death (truly great 2 disk shoot-em-up, by Thalion, several levels have graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

---

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
1st Extra (1 disk, version 1.03, allows index/contents etc. for 1st W+)
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Diamond Edge, the latest version 2 ** (with manual) (SOLD)
Diamond Back 3 ** (with manual) (SOLD)
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Geneva ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Imagecopy 4 ** (2 disks) (with manual) (SOLD)
K-Rhyme (rhyming accessory) * (SOLD)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Neodesk 4 ** (1 disk, but this one counts as 2 disks), latest patched version, manual available) (SOLD)
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Le Redacteur ** (4 disks) (SOLD)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

---

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten text by ES of TEX, ST only) price: 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
DEF Demo (1 meg version of the first TLB demo, with hand-written label by Tim of the Lost Boys himself!): 2 (SOLD)
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are

"STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

---

FOURTH CATEGORY: MISCELLANEOUS

ATARI CD ROM (SOLD)

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer (I had in mind about 10 British pounds each).

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Gauntlet (SOLD)
Ninja Gaiden
Rampage
Robosquash (SOLD)
Todd's Adventures in Slimeworld (SOLD)

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ------------------------------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 ( INT(x/5)=x/5 ). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing ) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

Your messages are still not appropriate in c.s.a.s.. This new Newton, I hear it's pretty fast, now it take only 1 second instead of 5 to recognise "Hello" as "Cheese monkey".

whoa! I have been advised, used and Recommended myself that you only
drop the ST three inches onto a flat hard surface to reseat the chips!
Dropping it from a standing position is liable to, at the least, crack
the case and possibly the main PC board! I would not recommend doing
this!

# 5885. MiNTNet/GlueSTiK/CAB v1.50

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: "Jon Hull (CS)" <hull@eng.usf.edu>
Message-ID: <Pine.GSO.3.94.970327182708.11536A-100000@suntan>
Source record: 124982

Hello, all. Normally I'm just a lurker in this newsgroup, but I have an urge to see the Net in living color, instead of this b&w Lynx stuff...

I own a Falcon030 TOS 4.04/4M RAM/85Mi HD/530Me HD and CAB v1.50.

I have heard that it is possible to get CAB running on a PPP connection using MiNTNet and GlueSTiK. My question: How? What is needed to do this? If there is anyone out there that could take me through a step-by-step process to reach this goal, I would appreciate some help. I'm just plain tired of using Lynx. I want to view the Web as it shoudl be viewed on an Atari; IN LIVING COLOR!

Thanks in advance...

- Matt DeJonge

My guess is that some European programs(especially demos) remove the
top and bottom boarders, and the whole thing is only done in 50Hz.
Pacifist has been knon to have problems with that trick.

I also guess that being a PC program, the screen doesn't have to be
in 50/60Hz...but it would be nice with the emulation would say to
itself, "yes I do have it in this mode". Still getting there folks...

>my vote for Tempest on the Falcon!! Also one of the problems with Atari's
>PC version is that there isn't a paddle wheel to control it. I wonder if a
>paddle controller from a 2600 would work on a Falcon? That would rock,Dood!

I doubt if you could get to get the paddles to work on the regular
joystick ports and unplugging things isn't exactly an option at all...

But, it's easy to make an adapter to use the paddle controls on the
analog ports on the side of the Falcon and STe and read it from there.

For Tempest though, you have to remember you can't go completely 360.
But someone may be lucky enough to find the driving control that came
with Indy 500 :)

BTW...please 'do' make Falcon versions of the best Stosser games. I
don't want to sound like, "I may play this in the future someday...",
but hopefully next year I can get a Phenix computer which should
handle Falcon games. We hope...

Although you ask for other ways, I'll write again about Ghostlink, for I had some simila problems:
1) Maybe you will need to adjust the serial port parameters on the Atari with some control program.
2) If you have a resident mouse driver in DOS, and if you want to use the same serial port, then better skip the loading of the driver in your AUTOEXEC.BAT.

I am sorry I can't say it will work for sure, because I haven't tried it with a 3-wire cable. But check out the two things above.

Hi, gluestik is not needed, there is a CAB_OVL for mint that works
perfectly well.
Just get KEMP_REV2. Just follow it step by step, many of you who
didn't touch any MiNT env , now have PPP Stable and fast on their
ataris. ah I see 4Meg of RAM, hm that might be a little short to run
CAB in 256 colors but with 14 meg, no prob at all.
Hey the 14meg have to be useful sometimes ;)
Well in my megaste 4 meg, Cab will run, but no NVDI or big fancy
cache, thus slowing down everything.
Well in short, the installation is not the probem anymore, in your
case you need to have at least 8 meg to be really confortable.
Also, get a nice, fast, reliaable AES. (N_AES for instance,
(commercial))
For international users, a friend of mine is working on an
international version of KGMD. wait a little bit if you don't speak
english, french or german.
bye

# 5891. Atari ST's

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: Edward Pallis <Vrak-Luthien@worldnet.att.net>
Message-ID: <333B58AF.1BE0@worldnet.att.net>
Source record: 124988

I was once the proud owner of many different Atari systems between 7 and 10 years ago, but jumped onto the PC Bandwagon at the end of teh 80's. I must admit it was a sad day for me to sell my 1040st.

I must admit that I was very much suprised to see various newsgroups and WEB sites dedicated to Atari's

What I'd like to know is, are companies still producing software for it?? And hasn't Atari now been bought out by some another company somewhat recently?? IF anyone could provide me a little information and what I have missed in the past few years, that would be most appreciated.

Thanks
Ed

# 5892. WTB: Mega ST4

There is a CENTEK directory at the the cnam ftp site that has several text
files telling about their products. A few are in French but most are in the
English version. Very interesting reading! :)

# 5894. Quick FAQ - Draft 0.1

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: please@no.spam.mail.here.mettav
Message-ID: <32675_please@no.spam.mail.here.mettav>
Source record: 125050

*Hi Nicholas*, on 26 Mar 97 you wrote: ...respect, brethren

b> This is a first draft version of a quick Atari FAQ. There are probably
b> many errors and omissions. Some parts are to be completed, some are to
b> be changed, some are probably completely wrong. Let me know.

I'll add what I can...

b> Ports:
b> ACSI (proprietary hard drive)
All except Falcon (I think).

b> Serial
3 on Mega STe, 4 on TT.

b> SCSI (Falcon only)
And TT.

IDE (2.5inch Internal - Falcon only)

Add LAN port on MSTe, TT and Falcon.

Add Analogue joystick ports on STe and Falcon

Add HD floppy on later models of MSTe, TT and all Falcons.

b> Models:
b> Name Speed RAM T TOS Floppy MBESVKTC Comment
b> ------------------------------------------------------------------------
b> TT030 32/030 2,4Mb S 3.06 1.44Mb BE VKTC Various mem/HD configs
b> ------------------------------------------------------------------------
b> T=RAM type (D:DRAM/S:SIMM/P:Proprietary memory board)
b> B=Blitter chip

No Blitter on the TT and RAM is 2-10Mb ST-RAM plus 0-128Mb TT RAM (dependent
on RAM board capability).

b> 1.2 What kind of monitor can I use ?
b> -------------------------------
b>
b> 1.2.1 Connecting to a TV Set
b>
b> A TV will only display in low or medium resolution modes.

Except on a Falcon...

# 5895. Want Warez? How much is it worth to you?

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: atari@teleport.TINC.com
Message-ID: <5hcs72$odg$12@nadine.teleport.com>
Source record: 125051

From ST Reports, #1312:

"Earlier this year, the FBI staged a coordinated series of raids nationwide following an eight month undercover investigation into software piracy. The computer software piracy investigation, code-named "Cyber Strike," was initiated and supervised by the FBI's International Computer Crime Squad based in San Francisco (Newsbytes, Jan. 29, 1997). According to FBI spokespersons, Cyber Strike is a "continuing investigation and additional searches are anticipated in the near future."

"The FBI said the investigation concerns the alleged efforts of individuals and groups who have banded together to pass protected, restricted and/or copyrighted information andcommercial copyrighted software through the use of businesses and computer Bulletin Board Services (BBSs), Internet File Transfer Protocol (FTP) sites, and Internet Relay Chat (IRC) channels. The material seized as specified in the warrants included computer hardware, documents and records, and included some of the most popular program software commercially available, such as utilities, graphics, networking programs, operating systems, and games."

Go ahead, post your email addresses here for the whole world to see, and ask for pirated software. We don't mind. Why should we? You'll be gone soon...

>Why are you so paranoid?

It's very simple, Paul. All thieves assume that everyone else is as honest as they are - and no more than that. Thus, apparently Lebech knows that, if someone sent him money in the mail to purchase a product, he would simply keep the money and never send the product, so he assumes that's how everyone else acts.

Of course, he's totally incorrect, if that's what he believes, but he also has demonstrated a total disregard for civilized behavior. Actually, he has the demonstrated ethical standards of... A caveman. See something, want it, take it. Never mind who is the rightful owner.

And I'm really tired of the entire thread so I'll just lay off now unless he comes back to me personally.

Well the original question in this thread was from a c.s.a.s newcomer asking
if he could run mac software on an old ST. I assumed he didn't have a hard
drive, which from my understanding, is a MUST for Mint, isn't it ?

You're still confusing things. There is nothing like "low" or "high"
level formatting when talking about SCSI. These terms were introduced in
the DOS world. Here "high" level means using the DOS format command
which does nothing else than clearing a partition and writing root
directory and FATs. "low" level in the DOS world means what the SCSI and
IDE specification understand about formatting. On the Atari formatting
always is what DOS people call "low level formatting". Something like
"high level formatting" doesn't exist on the Atari. Partitioning does it
all, i.e. partitioning on the Atari does what the commands 'fdisk' and
'format' do an the PC.

At the beginning I was thinking of posting the FAQ (or getting someone to post it with a chrontab) regularly in the newsgroup. but we can also put it on the web and FTP sites

I'll wait until it gets into an advanced finalized version before converting it to HTML. Your offer to put it on your web page is welcome. My web space is nearly full and is not at all Atari related.

Well, twice I had serious disk errors that it couldn't fix. Each time I had
a file that couldn't be deleted. As far as I could tell, the FAT was
corrupted. Actually Edge didn't even know there was a problem. The only
cure was to zero the bad partition. Also Edge has crashed a few times
without any apparrent reason.

Ant, Sounds like a FDD problem to me. I assume you have tried to
cold boot (turn the power on ) with either a blank formatted disk
or with no disk at all in the drive. If either of these tricks
gives you a useable system then I would suggest that your boot
disk has a corrupt desktop.sys file which you can fix (usually) by
saving the desktop with the offending disk (write enabled) in the
FDD.

If the above doesn't bring the desired result then prepare for
surgery! But wait, your problem may just be a loose or corroded
cable connector.

My next step after those above would be to venture inside said ST
and check the cable connection from the mother board to the FDD.

Be sure to unplug everthing from the power before picking up that
screwdriver. Lethal voltages lurk inside mains operated equipment.

Good luck..

The newer version are much much better and more stable, but it can still
sometimes behave like you says, but my cure is: copy all files and dir
to a new fresh partition (if you have space), zero-ing the faulty partition
and copy back all files and then run edge again. Almost all times it
has worked for me without any loss of files.

On Sun, 23 Mar 1997, it was written:

-> heres the question?, i am about to finish BILLY BOY the
-> "** childrens **" platformer, then starting work on a TEMPEST clone
->thats going to knock your socks off,

I fed lots of quarters into Tempest arcade machines years ago. That was the only game I played regulary. More of a pinball fan back then. I hereby cast my vote for Tempest on the Falcon!! Also one of the problems with Atari's PC version is that there isn't a paddle wheel to control it. I wonder if a paddle controller from a 2600 would work on a Falcon? That would rock,Dood!

> > I would be really grateful if someone could help.

I've fixed a bunch of troubled machines with the following rather
forcefull method.

CAUTION, USE AT YOUR OWN RISK:

1. Take the ST, and disconnect everything from it.
2. Then drop it on the floor, don't throw it, but let it fall on it's feet
(so it doesn't fall on the corners or back), whilst standing up.
3. Do this three times.

It a lot of cases this will resettle any ever so slightly misaligned
connections. Works with computers & drives (NOT with monitors).

Best Regards

Jeffrey Fredrickson

## 5909. ST+14/Falcon

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5hd066$erk@news.telebyte.com>
Source record: 125065

Hi Tony!

I just downloaded ST+14 from geocities and I wanted to let you and others know that it ran fine on my Falcon/TOS4.04/SVGA system. I didn't have to configure anything other than changing the Video to either low or med rez :)

I just ran the prg from my HD or RamDisk and that was it. I know CiH had some reservations about the Falcon setup, but whatever you did works fine.

I spent about two hours reading all the messages, etc. and enjoyed every minute :) You Brits have a unusual sense on humor. I guess that's why I like your sitcom's so much; Red Dwarf, Faulty Towers, Dr. Who, Blake's 7...

Of course, I guess your impressed by our export, "Baywatch" :)

Ta,

Charles

# 5911. Quick FAQ - Draft 0.2

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: bales@garonne.stortek.NOSPAM.com
Message-ID: <E7pGD2.2Jq@gazette.stortek.com>
Source record: 125067

Here is Draft v0.2 of the quick FAQ.

It's still probably full of crap, so please let me know if anything is wrong.
Many thanks to the people that have responded.

I now need input basically on the topics of Hard Drives (IDE, Driver
software), VGA and Multisync monitors, Accelerator boards and TOS upgrades.

Anything else you might think of is also welcome.

So here it goes...

Nicholas Bales, Toulouse, France

--

THE ATARI ST QUICK FAQ
----------------------

Draft v0.2 - March 27th 1997
Nicholas Bales - bales@garonne.stortek.com

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking
the same questions over and over again, here is a quick list of the most
Frequently Asked Questions (FAQ) and, hopefully, useful answers. The aim
of this FAQ is not to answer all of your questions, but only to indicate
pointers to the most common ones.

Please note that this FAQ is aimed at newcomers and is mostly ST oriented.

I am only the compiler of this FAQ. I have built it up from answers to
many posts from c.s.a.s. I am not really an Atari specialist, and have
not implemented half of the topics that are dealt with in this FAQ.

Therefore, if you have more specific questions, please direct them to the
newsgroup instead of me. Any comments regarding the FAQ itself however
(corrections, additions, comments, total contradictions) are absolutely
welcome. I'll be quite happy to add omissions and correct errors.

Credits are listed at the end of the FAQ.

CONTENTS:

1. Starting up on the Atari ST

3.3 Where are the Atari Web Pages ?

---

1. Starting up on the Atari ST

1.1 What kind of machine is an Atari ST ?
---
The Atari ST range is a 16/32 bit Motorola 68000 based personal
computer range started in the mid 80's. Here are some generic specs.
Some models differ from these specs, so check the list below

Processor
Motorola 68000 (68030 on TT and Falcon) processor at 8Mhz (16 on MegaSTE
and Falcon, 32 on TT030)

Screen Resolutions:
High: 640x400/Monochrome on dedicated monitor,
Medium: 640x200/4 colours on colour monitor or TV,

Low: 320x200/16 colours on colour monitor or TV,
512 colour palette (4096 on STe, MegaSTe, TT)
Other resolutions are available on TT, and Falcon computers.

Ports:
Cartridge, Midi In, Midi out, Parallel, Serial, Monitor, Disk Drive,
ACSI (proprietary hard drive), TV antenna (on RF equipped models),
RCA/CINCH stereo (from STE on), Joystick/Mouse, SCSI (Falcon/TT)

Models:

Name Speed RAM R TOS Floppy MBESVKTC Comment
---
130 ST 8 128Kb D 1.0 Ext. Never marketed
260 ST 8 256Kb D 1.0 Ext. Very few made
520 ST 8 512Kb D 1.0 Ext. disk TOS on early models
1040 ST 8 1Mb D 1.0 Ext. disk TOS on early models
520 STf 8 512Kb D 1.2 360Kb
1040 STf 8 1Mb D 1.2 720Kb
520 STfm 8 512Kb D 1.2 360Kb M
1040 STfm 8 1Mb D 1.2 720Kb M
MegaST 1 8 1Mb D 1.2 720Kb B S KT Pizza box
MegaST 2 8 2Mb D 1.2 720Kb B S KT Pizza box
MegaST 4 8 4Mb D 1.2 720Kb B S KT Pizza box
STacy 8 2/4Mb D 1.4 720Kb B Portable ST
STBook 8 1-4Mb D 2.06 720Kb B Notebook, Very few made
520 STe 8 512Kb S 1.62 720Kb MBE
1040 STe 8 1Mb S 1.62 720Kb MBE
Mega STe 16 1-4Mb S 2.06 1.44Mb MBE VKTC TT style case.
TT030 32/030 2,4Mb S 3.06 1.44Mb E VKTC Various mem/HD configs
Falcon 6/030 1-14Mb P 4.04 1.44Mb BE TC Many enhancements
---
R=RAM type (D:DRAM/S:SIMM/P:Proprietary memory board)

M=RF Modulator
B=Blitter chip
E=Enhanced 8bit DMA stereo sound, 4096 colour palette, hardware scrolling,
analog joystick ports
S=MegaBus processor direct bus slots
V=6U VME bus slot
K=Detached keyboard design
T=Internal time/date clock
C=68882 Math co-processor

In this FAQ, unless otherwise specified, 'ST' refers to any ST, STf, STfm,
STe, Mega ST or Mega STe computer. 'Atari' will refer to any ST or Falcon
or TT.

1.2 What kind of monitor can I use ?
---

1.2.1 Connecting to a TV Set

STfm and later models were equipped with an RF Modulator allowing them to be connected to a TV's antenna connector. Check section 1.1 to see if your ST has a modulator. You then need to tune into the correct channel on the TV to get the ST picture.

In some countries, Atari shipped machines with a SCART/Peritel cable that plugs into the monitor port instead of the RF Modulator. In this case you need the adequate cable and a SCART/Peritel equipped TV set. No tuning is required, and the picture is higher quality than through aerial.

A TV will only display in low or medium resolution modes.

1.2.2 Atari Monitors

Monochrome (640x400 colours) requires special Atari high resolution 70Hz monitors (SM models). These monitors have a very stable paper white display. SM monitors can only display monochrome mode.

Medium Res. (640x200/4 colours) and Low Res (320x200/16 colours) need a colour monitor (SC series) or a TV.

If you want to display all screen resolutions you need both types of monitors.

Falcons are VGA and need an adaptor to use Atari SC/SM monitors.

1.2.3 VGA, SVGA or multiscan monitors

First of all, you need a monitor that supports

Falcons use VGA monitors as standard

1.3 Where can I get a boot disk for my ST ?
---

1.3.1 Booting without a disk

First of all, Atari models with TOS in ROM don't need a boot disk. If you do not have a correctly formatted double density disk to boot from, just wait a few minutes for the GEM desktop to come up on it's own, then format a clear double density disk using the menu option.

If the desktop screen doesn't come up after more than 5 minutes, either your ST is broken or you have an old ST without TOS in ROM.

1.3.2 Atari Language disks

Depending on the ST version you have, a language disk was supplied with some basic software, mainly:

CONTROL.ACC Control panel desk accessory. Later replaced by XCONTROL
XCONTROL.ACC A modular control panel accessory. Uses CPX files.
STBASIC.PRG An old and very buggy Basic interpreter.
LOGO.PRG An old Logo interpreter.

Very few of the programs supplied on these disks were of much use. Better quality public domain, shareware or commercial replacements can be found

on most FTP servers (see section 2.2)

1.4 Can I run Atari ST software on my PC/Mac/Unix box ?
---

You need a program which fools your computer into running Atari ST programs. This is called an emulator. There are plenty of them available on the Internet.

Here are some good net resources for Atari emulator software:

http://www.nfinity.com/~swhalen/node99/st.html
http://www.emulators.com/
http://www.complang.tuwien.ac.at/nino/stemu.html
http://wwwperso.hol.fr/~gidouin/pacifist.html

1.5 Where can I get those TOS ROM images ?
---

TOS is the ST's operating system. It was supplied on ROM with most STs. Some emulators need an image of these ROMs in order to run.

However, TOS is copyrighted software and the distribution rights belong to Atari. Neither Atari nor JTS (the company who now owns Atari) has stated that any version of TOS can be freely distributed and used. Distributing it without a licence is therefore software piracy, which is illegal and enforced everywhere.

Solliciting pirated software is also illegal.

Owners of a real ST can use a program called TOSDUMP.PRG to make a TOS image for their own use. This is considered legal as long as the image is not distributed and you own a legal copy of the program (ie: the ROMs).

Illegal copies of TOS images can be found on the net. Please note that using one is illegal, and asking for one in the newsgroups is against the charter and will cost you lots of flames and trouble.

2. Software
==========

2.1 Where can I get WareZ for the Atari ?
---

Software piracy is an illegal activity. Participating and promoting it is considered an offense on most newsgroups, and comp.sys.atari.st readers are strongly opposed to it.

If you still wish to ask for pirated software, do so at you're own risk, but be aware that you will receive flames, complaints to your domain administrator, general discredit and maybe even more trouble.

See also section 1.5 on TOS ROMs

## 2.2 Where can I get freeware or shareware on the Net ?

There is lots of freeware and shareware available for the Atari ST on FTP archive sites. Most applications are available as such.

Complete lists of FTP sites can be found here:

ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt
http://www.umich.edu/~archive/atari/Info/atari-ftp.sites
http://web.cnam.fr/ftp/pub/Atari/Docs/atari-ftp.sites

Web interfaces to 3 of the most active atari FTP archives:

http://www.cnam.fr/Comp/Atari/Index.html
http://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html
http://www.umich.edu/~archive/atari/

FTP mirror to uni.paderborn and umich archives

ftp://sunsite.doc.ic.ac.uk/pub/computing/systems/atari

Do not forget that shareware (and sometimes freeware) means that you have to register the software if you use it regularly. Please do so as this is an encouragement for programmers to continue developing for the Atari platform.

## 2.3 Is there a DOOM clone for Atari ?

SubStation from UDS is a Wolfenstein 3D clone for the STE, without texture-mapping, but with a similar look and feel. UDS has a web site:

http://www.uds.se/complete.htm

Bad MOOD is a joint internet project to build a 3D Doom engine for the Falcon. More information can be found here:

http://rand.thn.htu.se/cgi-bin/buildpage?bad_mood

# 2. Hardware Upgrades

## 2.1 How can I upgrade memory on my Atari ?

### 2.1.1 Expanding SIMM equipped models

If your ST is equipped with SIMM memory, you can easily upgrade your memory to 1, 2 or 4Mb by just taking out the old SIMMs and popping in the new ones.

The correct memory type is 30 pin SIMMs, minimum speed 120ns, with or without parity, 256Kb or 1Mb. It is best not to mix different SIMM types. They must be implemented by pair in slots 1 and 3, then 2 and 4 (from back to front).

Atari STEs are originally equipped with either 2 (520STE) or 4 (1040STE) 256Kb SIMMs that can be replaced by 2 or 4 x 1Mb SIMMs.

Because of a bug in TOS, STEs will not recognize a 2.5Mb configuration (2x256Kb + 2x1Mb) without a small AUTO folder program called simmfix. This can be found on any FTP site, but is quite unreliable.

2.1.2 Expanding DRAM equipped models
---
On DRAM memory models, the memory chips are soldered directly to the computer's motherboard. This make expansion more tricky. Each chip has to be soldered correctly, and the motherboard must have enough room for the expansion. A 520ST/STF can be expanded to 1Mb, a Mega ST can be expanded to 4Mb.

A way around this is to use a special memory expansion board that replaces the original memory banks with standard SIMM sockets. There are many such solutions available. Look for Atari related companies on the Atari web pages (section 3.3).

2.1.3 Those Falcon boards
---
The step forward from DRAM to SIMMs on the STE series became a step back to a proprietary memory board system on the Falcon. The falcon was pre-equipped with 3 memory board models: 1, 4 or 14Mb. Upgrading a Falcon means scrapping the original memory and replacing it with either a new proprietary memory board or a third party SIMM board. There are many of these available and can sometimes be combined with a CPU accelerator board (see section 3.3)

2.2 How can I connect a hard disk drive to my ST ?
---

2.2.1 Atari Megafile and SH hard drives.
---
These were proprietary hard disk drives designed by Atari for the ST. They were available in capacities ranging from 20 to 60Mb. These are the only hard drives that are directly compatible with the Atari ACSI port on original STs.

2.2.2 SCSI hard drives
---
In order to use these, you need a SCSI Host adapter that connects the SCSI drive to the ACSI hard drive port on the Atari. There are several models available depending on whether or not you need parity, whether or not they are for external or internal drives. The 2 most common SCSI host adapters are ICD's The Link II and the Link'96 from Norbert Wieczorek. They can be found at:

http://www.icdinc.com/
http://members.aol.com/NorWiecz/index_e.html

Don't forget also that there is not much room for a 3.5 hard drive inside an original ST case. You will need either to put the whole system into a

PC type tower case, or to file an external housing and power supply for
your hard drive.

2.2.3 IDE hard drives
---
There seems to be actually no way to connect an IDE drive to an ST. You
need to go the SCSI way. See section 2.2.2

The Falcon has an internal IDE slot for internal 2.8" IDE drives.

2.2.4 ZIPs, CDROMs, Syquest drives, anything else non-SCSI
---
These have to be SCSI models and use a host adapter described in 2.2.2.
Parallel port peripherals cannot be used an any ST because Parallel
port communication was not fully implemented by Atari.

Be aware also that CD ROMS and ZIP drives need parity enabled, so you
must have a parity enabled SCSI adapter.

MLM or any other non-SCSI drives will need a SCSI adapter, that you will
then connect to the SCSI/ACSI adapter (section 2.2.1) connected to the ST.

2.2.5 Hard disk driver software
---
In order to get TOS to recognize the drive. AHDI is Atari's Hard Disk
Driver an can be obtained free from any good FTP server (see section 2.2).
However, it appears that it is not as reliable and efficient as 3rd
party driver software such as ICD Tools or HD Driver.

(Input needed)

3. Connectivity
==========

3.1 How can I transfer files between an ST and another computer ?
---

3.1.1 Exchanging TOS and MS-DOS disks
---
The TOS disk format is DOS compatible. This means that any 720Kb double
sided double density disk from a PC can be read on an ST and vice versa.

There are several limits however:

-Older TOS versions (before 1.4) do not format disks exactly the same way
as MS-DOS, so for these models, you might try formatting the disk on a PC.

-Some old 520ST, STF and STFM models use 360Kb single sided drives which
are not compatible with most newer 1.44Mb PC models. You must either get
a double sided drive for the ST or find a PC that is able to read the
old single sided disks.

-Windows 95 uses long filenames and seems to sometimes corrupt TOS disks,
so be sure to use the 8+3 standard DOS/TOS format.

3.1.2 Exchanging TOS and Macintosh disks
-----
TOS is not compatible with macintosh disk format. However modern Macs
are supplied with a system extension that allows reading and writing
MS-DOS disks which are compatible with TOS (See section 3.1.1).

3.1.3 Serial port file transfer
-----
Another way of exchanging files between ST and PC is to use the serial
port with a null modem cable. Ghostlink will do this and can be found at
your favourite FTP site (see section 2.2).

3.2 How can I hook up my ST to the Internet ?
---

The ST can be used to send and receive email, read usenet newsgroups,
download from FTP archives, and even to surf the web.

There is a whole lot of internet resources on the subject:

The Atari Internet guide
http://zippy.spods.dcs.kcl.ac.uk/~garfield/aig/aig.htm

The Atari Connection
http://www.cedep.com/~gstamant/atari/atanet_e.htm

Internet Software for Atari
http://localhost.ruhr.de/~sacha/index_e.html

The STiK support page
http://www.flinny.demon.co.uk/

3.3 Where are the Atari Web Pages ?
---

Atari Jagwire (for Jaguar support only)
http://www.atari.com

The Atari ST Launchpad
http://home.sn.no/~hallvart/pages/atari.html

Atari Internet Resource Guide
http://www-und.ida.liu.se/~t94patsa/atari.html

## 5912. where to get STonX?

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: rlee@harmony.hursley.ibm.com
Message-ID: <5hdvjq$12ng$1@zen.hursley.ibm.com>
Source record: 125068

I'm trying to find where to get STonX for use on Linux.
It seems the usual URL (zork...something, from the official site)
isn't working and the unofficial site no longer even had binaries.
Is there ANYWHERE I can get this? (Personal use).

Cookbook on a Disk
PC-Ditto
uEmail
TurboST.Acc
uEmacs
Partner ST
Midi Software:
EZ Track + Song Disk
CZ-Android

CZ-101 Patch Editor/Generator/Librarian
Dr. T's CZ Voice Patch
CZ Patch CIN, CZ Patch Folder, P.D. Editor
Music Studio (color)
Games:
Marble Madness
Gauntlet
Tetris
Flight Simulator
Mom&Me
Star Raiders
8Ball
Outrun
Super Sprint
Trivia Challenge
Leader Board
Rampage
Wuppet

ALL OF IT - hardware, books, in mint condition.

This sometimes under-appreciated relic and accompanying software/books would be great for anyone who wants to learn C, get into Midi, wants to learn 68000 assembly language (or assembly language in general), or just have fun seeing what things were like in the good old days. The games are classics.
(BTW, there is plenty of ST software to be found on Shareware.Com).

AND the price?

A steal (the books alone were $250 new).

TAKE EVERYTHING FOR $250, or reply if you want to deal on individual parts (Obviously, my preference is to sell the whole package, but I'm open to discussion). You pay shipping if you can't come and get it (Bay Area, CA).

AND, if you decide to go for it all, you get an extra bonus!
A comatose Supra hard drive - absolutely free.

Who could resist such a bargain?

Reply to peggy260@aol.com

# 5915. Re: Nemesis

Great - Centek goes puplic!
So, tell us a bit more about Centurbo 1:
- How compatible is it?
- Software switchable from the desktop?
- Difficult installation? - and does it come with an english manual?
- What sort of software is included, and is it only in french?
..etc.etc.

Would also love to hear about your other projects, i.e. Centurbo 2 and
the rumoured Phenix. Will these be realised, and when..??

Regards,

- Petter -

## 5916. Software602, Inc.

Newsgroup: comp.sys.atari.st
Date: 1997-03-27 00:00:00 UTC
From: Justin Morgan <jmorgan@software602.com>
Message-ID: <01bc3a57$2066b920$7c36c4c2@soft602.software602.com>
Source record: 125072

602proINTERNET, automated LAN access to the INTERNET, software allows Local

Area Network to connect simultaneously to the Internet through just ONE
modem dial-up or dedicated, with Firewall, WWW and E-Mail Clients.

http://www.software602.com

602proINTERNET is a communication software package for full connection to
the Internet using dial-up or leased line. If you are a small business
owner
or an IS manager in a small to medium sized company, you have just found
the
software you need. 602proINTERNET allows a number of computers to access
the
Internet through one account. The product includes SMTP/MIME e-mail with
clients for Windows 3.1x, Windows95 and WEB clients for Windows 3.1x and
Windows95. 32-bits Mail602 INTERNET Server provides fast, high-quality
delivery of your messages. Firewall SOCKS solves the security of your
network. 602proINTERNET offers the possibility of using online access to
the
Internet for all users in your network simultaneously for the price of
connecting a single PC.

What can 602proINTERNET do?

"SURF" the NET from any workstation on the network!
The user of each workstation on the network has access to WWW pages of any
WEB site on the Internet. All users on the network can "surf" on the
Internet simultaneously.

Electronic mail for each network user!
602proINTERNET includes SMTP/MIME e-mail with the option to send and
receive
attached files for any user on the network, regardless whether he is using
Windows 3.1x or Windows95. E-mail has many ways of administrating the
users'
rights. Every user of your network has his own Internet address (i.e.
"user@yourcompany.com").

Security!
Our firewall SOCKS solves the security of your network against access
byunauthorized personnel. At the same time you may define access to WWW to
selected users on your network. Security is solved directly at the IP
packet
level and this is why it is reliable.

Only one IP address is all that you need!
You save your money! Your full connection to the Internet using
602proINTERNET requires only one IP address for the whole network. You will

connect your whole network to the Internet for the price of connecting a
single computer.

Available for Dial-up and leased line connections, too!
The software package 602proINTERNET is great for Dial-up as well as for
leased line connections. No more expensive telephone lines!

>
>(i) Is there any specific drive weakness that can be pin pointed?

Smoking, dust, high humidiyt and hihg (above 68 F) temperatures are all enemies of electronics in general, and disk drives in particular. Power line transients are another; if you ever notice your lights flickering, or changing brightness, you suffer from transients or instabilities.

>(ii) Any upgrade that I could do or get done to these drives?

You can replace the drive mechanisms, keep them in a clean, cool, smoke-free, dry room, and get a power line filter or UPS/filter. Alos be sure to use only high-quality disks - the cheap ones flake and disintegrate, leaving residue on the drive heads.

It's also possible to get drive head cleaning kits - basically a paper disk with some cleaning fluid. Be sure the packaging says "non-abrasive" as the ones that do not say that are equal to using sandpaper - not recommended at all.

# 5924. Quick FAQ - Draft 0.3

Newsgroup: comp.sys.atari.st
Date: 1997-03-28 00:00:00 UTC
From: bales@garonne.stortek.NOSPAM.com
Message-ID: <E7rHpp.2nD@gazette.stortek.com>
Source record: 124930

Next version, just before the week-end. I will now only post this every
friday, and future revisions will carry rev. marks (*)

I still need input on the Hard Drive topics (drivers, adapters), TOS and
HD floppy upgrades, and accelerator boards. Precisions on Falcons, TTs
and Mega STes are also welcome as I'm not too familiar with those
machines.

Well, just about any input is welcome anyway.

Nicholas Bales, Toulouse, France
--

THE ATARI ST QUICK FAQ
----------------------

Draft v0.3 - March 28th 1997
Nicholas Bales - bales@garonne.stortek.com

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking
the same questions over and over again, here is a quick list of the most
Frequently Asked Questions (FAQ) and, hopefully, useful answers. The aim
of this FAQ is not to answer all of your questions, but only to indicate
pointers to the most common ones.

Please note that this FAQ is aimed at newcomers and is mostly ST oriented,
but I hope it will be of use also to more experiences users too.

I am only the compiler of this FAQ. I have built it up from many c.s.a.s
threads, older FAQs and other internet based information. I am not really
such an Atari specialist myself, and have no personal experience of many
of the topics that are dealt with in this FAQ.

Therefore, if you have more specific questions, please direct them to the
newsgroup instead of me. Any comments regarding the FAQ itself however
(corrections, additions, comments, total contradictions) are absolutely
welcome. I'll be quite happy to add omissions and correct errors.

Topics that are not covered in this FAQ might be in the older FAQs:

ftp://ftp.sn.no/user/hallvart/atari/info/n_faq1.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq3.txt

Credits are listed at the end of this file.

3.3 Where are the Atari Web Pages ?

---

## 1. Starting up on the Atari ST

### 1.1 What kind of machine is an Atari ST ?

The Atari ST range is a 16/32 bit Motorola 68000 based personal
computer range started in the mid 80's. Here are some generic specs.
Some models differ from these specs, so check the list below

Processor
Motorola 68000 (68030 on TT and Falcon) processor at 8Mhz (16 on MegaSTe
and Falcon, 32 on TT030)

Screen Resolutions:
High: 640x400/Monochrome on dedicated monitor,
Medium: 640x200/4 colours on colour monitor or TV,
Low: 320x200/16 colours on colour monitor or TV,
512 colour palette (4096 on STe, MegaSTe, TT)
Other resolutions are available on TT, and Falcon computers.

Ports:
Cartridge, Midi In, Midi out, Parallel, Serial, Monitor, Disk Drive,
ACSI (proprietary hard drive, except Falcon), TV antenna (on RF equipped
models), RCA/CINCH stereo (from STe on), Joystick/Mouse, Analogue joystick
(on STe), SCSI (Falcon/TT).

Models:

Name Speed RAM R TOS Floppy MBESVKTC Comment
---
130 ST 8 128Kb D 1.0 Ext. Never marketed
260 ST 8 256Kb D 1.0 Ext. Very few made
520 ST 8 512Kb D 1.0 Ext. disk TOS on early models
1040 ST 8 1Mb D 1.0 Ext. disk TOS on early models
520 STf 8 512Kb D 1.2 360Kb
1040 STf 8 1Mb D 1.2 720Kb
520 STfm 8 512Kb D 1.2 360Kb M
1040 STfm 8 1Mb D 1.2 720Kb M
MegaST 1 8 1Mb D 1.2 720Kb B S KT Pizza box
MegaST 2 8 2Mb D 1.2 720Kb B S KT Pizza box
MegaST 4 8 4Mb D 1.2 720Kb B S KT Pizza box
STacy 8 2/4Mb D 1.4 720Kb B Portable ST
STBook 8 1-4Mb D 2.06 720Kb B Notebook, Very few made
520 STe 8 512Kb S 1.62 720Kb MBE
1040 STe 8 1Mb S 1.62 720Kb MBE
Mega STe 16 1-4Mb S 2.06 1.44Mb MBE VKTC TT style case.
TT030 32/030 2-10Mb S 3.06 1.44Mb E VKTC Various mem/HD configs
Falcon 6/030 1-14Mb P 4.04 1.44Mb BE TC Many enhancements
---
R=RAM type (D:DRAM/S:SIMM/P:Proprietary memory board)

M=RF Modulator
B=Blitter chip
E=Enhanced 8bit DMA stereo sound, 4096 colour palette, hardware scrolling,
analog joystick ports
S=MegaBus processor direct bus slots
V=6U VME bus slot
K=Detached keyboard design
T=Internal time/date clock
C=68882 Math co-processor

In this FAQ, unless otherwise specified, 'ST' refers to any ST, STf, STfm, STe, Mega ST or Mega STe computer. 'Atari' will refer to any ST or Falcon or TT.

## 1.2 What kind of monitor can I use ?

### 1.2.1 Connecting to a TV Set

STfm and later models were equipped with an RF Modulator allowing them to be connected to a TV's antenna connector. Check section 1.1 to see if your ST has a modulator. You then need to tune into the correct channel on the TV to get the ST picture.

In some countries, Atari shipped machines with a SCART/Peritel cable that plugs into the monitor port instead of the RF Modulator. In this case you need the adequate cable and a SCART/Peritel equipped TV set. No tuning is required, and the picture is higher quality than through aerial.

A TV will only display in low or medium resolution modes.

### 1.2.2 Atari Monitors

Monochrome (640x400 colours) requires special Atari high resolution 70Hz monitors (SM models). These monitors have a very stable paper white display. SM monitors can only display monochrome mode.

Medium Res. (640x200/4 colours) and Low Res (320x200/16 colours) need a colour monitor (SC series) or a TV.

If you want to display all screen resolutions you need both types of monitors.

Falcons are VGA and need an adaptor to use Atari SC/SM monitors.

### 1.2.3 VGA, SVGA or multisync monitors

First of all, you need a monitor that supports the following refresh rates :

| | ST High | ST Low/Medium |
|---|---|---|
| Vertical refresh rate | 70 Hz | 50 or 60 Hz |
| Horizontal refresh rate | 31.5 Khz | 15.75 Khz |

A FAQ on the use of multisync monitors with the ST can be found here:

ftp://ftp.teleport.com/users/atari/multsync.faq

Another one on a Multisync/VGA/ST-res adaptor for Falcon is here:

ftp://nic.funet.fi/pub/atari/falcon/doc/falcadap.zip

Falcons can use VGA monitors as standard

## 1.3 Where can I get a boot disk for my ST ?

### 1.3.1 Booting without a disk

First of all, Atari models with TOS in ROM don't need a boot disk. If you do not have a correctly formatted double density disk to boot from, just wait a few minutes for the GEM desktop to come up on it's own, then format a clear double density disk using the menu option.

If the desktop screen doesn't come up after more than 5 minutes, either your ST is broken or you have an old ST (neither f or fm or e) without TOS in ROM.

### 1.3.2 Atari Language disks

Depending on the ST version you have, a language disk was supplied with some basic software, mainly:

CONTROL.ACC Control panel desk accessory. Later replaced by XCONTROL
XCONTROL.ACC A modular control panel accessory. Uses CPX files.
STBASIC.PRG An old and very buggy Basic interpreter.
LOGO.PRG An old and quite useless Logo interpreter.

Very few of the programs supplied on these disks were of much use. If it was lost, it is no big deal. Better quality public domain, shareware or commercial replacement programs can be found on most FTP servers (see section 2.2).

## 1.4 Can I run Atari ST software on my PC/Mac/Unix box ?

You need a program which fools your computer into running Atari ST programs. This is called an emulator. There are plenty of them available on the Internet.

Here are some good net resources for Atari emulator software:

http://www.nfinity.com/~swhalen/node99/st.html
http://www.emulators.com/
http://www.complang.tuwien.ac.at/nino/stemu.html
http://wwwperso.hol.fr/~gidouin/pacifist.html

## 1.5 Where can I get those TOS ROM images ?

TOS is the ST's operating system. It was supplied on ROM chips with most STs. Some emulators need an image of these ROMs in order to run.

However, TOS is copyrighted software and the distribution rights belong to Atari. Neither Atari nor JTS (the company who now owns Atari) has stated that any version of TOS can be freely distributed and used. Distributing it without a licence is therefore software piracy, which is illegal and enforced everywhere in the world.

Solliciting pirated software is also illegal.

Owners of a real ST can use a program called TOSDUMP.PRG to make a TOS image for their own use. This is considered legal as long as the image is not distributed and you own a legal copy of the program (ie: the ROMs).

Illegal copies of TOS images *can* be found on the net. Please note that using one is illegal, and asking for them in the newsgroups is against the charter and will cost you lots of flames and trouble.

---

## 2. Software

### 2.1 Where can I get WareZ for the Atari ?

Software piracy is an illegal activity. Participating and promoting it is considered an offense on most newsgroups, and comp.sys.atari.st readers are strongly opposed to it.

If you still wish to ask for pirated software, do so at you're own risk, but be aware that you will receive flames, complaints to your domain administrator resulting in losing your internet access, general discredit and maybe even more trouble.

See also section 1.5 on TOS ROMs.

### 2.2 Where can I get freeware or shareware on the Net ?

There is lots of freeware and shareware available for the Atari ST on FTP archive sites. Most applications are available as such.

Complete lists of FTP sites can be found here:

ftp://ftp.sn.no/user/hallvart/atari/info/ftplist.txt
http://www.umich.edu/~archive/atari/Info/atari-ftp.sites
http://web.cnam.fr/ftp/pub/Atari/Docs/atari-ftp.sites

Web interfaces to 3 of the most active atari FTP archives:

http://www.cnam.fr/Comp/Atari/Index.html
http://micros.hensa.ac.uk/micros/atari/tos/atari-tos.html
http://www.umich.edu/~archive/atari/

FTP mirror to uni.paderborn and umich archives

ftp://sunsite.doc.ic.ac.uk/pub/computing/systems/atari

Do not forget that shareware (and sometimes freeware) means that you have to register the software if you use it regularly. Please do so as this is an encouragement for programmers to continue developing for the Atari platform.

### 2.3 Is there a DOOM clone for Atari ?

SubStation from UDS is a Wolfenstein 3D clone for the STE, without texture-mapping, but with a similar look and feel. UDS has a web site:

http://www.uds.se/complete.htm

Bad MOOD is a joint internet project to build a 3D Doom engine for the Falcon. More information can be found here:

http://rand.thn.htu.se/cgi-bin/buildpage?bad_mood

## 2. Hardware Upgrades

### 2.1 How can I upgrade memory on my Atari ?

#### 2.1.1 Expanding SIMM equipped models

If your ST is equipped with SIMM memory, you can easily upgrade your memory to 1, 2 or 4Mb by just taking out the old SIMMs and popping in the new ones.

The correct memory type is 30 pin SIMMs, minimum speed 120ns, with or without parity, 256Kb or 1Mb. It is best not to mix different SIMM types. They must be implemented by pair in slots 1 and 3, then 2 and 4 (from back to front).

Atari STEs are originally equipped with either 2 (520STE) or 4 (1040STE) 256Kb SIMMs that can be replaced by 2 or 4 x 1Mb SIMMs.

Because of a bug in TOS, STEs will not recognize a 2.5Mb configuration (2x256Kb + 2x1Mb) without a small AUTO folder program called simmfix. This can be found on any FTP site, but is quite unreliable.

#### 2.1.2 Expanding DRAM equipped models

On DRAM memory models, the memory chips are soldered directly to the computer's motherboard. This make expansion more tricky. Each chip has to be soldered correctly, and the motherboard must have enough room for the expansion. A 520ST/STF can be expanded to 1Mb, a Mega ST can be expanded to 4Mb.

A way around this is to use a special memory expansion board that replaces the original memory banks with standard SIMM sockets. There are many such solutions available. Look for Atari related companies on the Atari web pages (section 3.3).

#### 2.1.3 Those Falcon boards

The step forward from DRAM to SIMMs on the STE series became a step back to a proprietary memory board system on the Falcon. The falcon was pre-equipped with 3 memory board models: 1, 4 or 14Mb. Upgrading a Falcon means scrapping the original memory and replacing it with either a new proprietary memory board or a third party SIMM board. There are many of these available and can sometimes be combined with a CPU accelerator

board (see section 3.3)

## 2.2 How can I connect a hard disk drive to my ST ?

### 2.2.1 Atari Megafile and SH hard drives.

These were proprietary hard disk drives designed by Atari for the ST. They were available in capacities ranging from 20 to 60Mb. These are the only hard drives that are directly compatible with the Atari ACSI port on original STs.

### 2.2.2 SCSI hard drives

In order to use these, you need a SCSI Host adapter that connects the SCSI drive to the ACSI hard drive port on the Atari. There are several models available depending on whether or not you need parity, whether or not they are for external or internal drives. The 2 most common SCSI host adapters are ICD's The Link II and the Link'96 from Norbert Wieczorek. They can be found at:

http://www.icdinc.com/
http://members.aol.com/NorWiecz/index_e.html

Don't forget also that there is not much room for a 3.5 hard drive inside an original ST case. You will need either to put the whole system into a PC type tower case, or to file an external housing and power supply for your hard drive.

### 2.2.3 IDE hard drives

There seems to be actually no way to connect an IDE drive to an ST. You need to go the SCSI way. See section 2.2.2

The Falcon has an internal IDE slot for internal 2.8" IDE drives.

### 2.2.4 ZIPs, CDROMs, Syquest drives, anything else non-SCSI

These have to be SCSI models and use a host adapter described in 2.2.2. Parallel port peripherals cannot be used an any ST because Parallel port communication was not fully implemented by Atari.

Be aware also that CD ROMS and ZIP drives need parity enabled, so you must have a parity enabled SCSI adapter.

MLM or any other non-SCSI drives will need a SCSI adapter, that you will then connect to the SCSI/ACSI adapter (section 2.2.1) connected to the ST.

A FAQ on using CD ROMS with Atari computers can be found here:

http://www.mcc.ac.uk/~dlms/CD_FAQ

### 2.2.5 Hard disk driver software

In order to get TOS to recognize the drive. AHDI is Atari's Hard Disk Driver an can be obtained free from any good FTP server (see section 2.2). However, it appears that it is not as reliable and efficient as 3rd party driver software such as ICD Tools or HD Driver.

It seems that some drivers are not compatible with some drives while they sometimes give better performance on others.

(Input needed)

2.3 I want to replace my floppy drive. What should I do ?
---

2.4 How can I upgrade the operating system ?
---

The ST's operating system, TOS, is on ROM chips on most STs. Only the very early ones had TOS 1.0 on disk.

TOS 1.2 (1.02) and 1.4 (1.04) came on 6 chips. All later versions came on 2 chips. TOS 2.06 is the latest version that can be used in an ST(e/f/fm). TOS 3.xx is for TTs and TOS 4.xx is for Falcons. These two are highly hardware dependent and cannot be used on other machines.

Upgrading TOS from a 2 chip version to a newer 2 chip one is quite simple.

For upgrading old 6 chip TOS machines to TOS 2.06, look here:

ftp://home.mtholyoke.edu/users/kellis/atari/tos206up.txt

Otherwise there are many TOS upgrade boards available as well as Bi-TOS boards allowing you to switch from your older TOS to 2.06 with an extra switch. This is to avoid compatibility problems with older programs.

---

3. Connectivity
==========

3.1 How can I transfer files between an ST and another computer ?
---

3.1.1 Exchanging TOS and MS-DOS disks
---
The TOS disk format is DOS compatible. This means that any 720Kb double sided double density disk from a PC can be read on an ST and vice versa.

There are several limits however:

-Older TOS versions (before 1.4) do not format disks exactly the same way as MS-DOS, so for these models, you might try formatting the disk on a PC.

-Some old 520ST, STF and STFM models use 360Kb single sided drives which are not compatible with most newer 1.44Mb PC models. You must either get a double sided drive for the ST or find a PC that is able to read the old single sided disks.

-Windows 95 uses long filenames and seems to sometimes corrupt TOS disks,
so be sure to use the 8+3 standard DOS/TOS format.

3.1.2 Exchanging TOS and Macintosh disks
-----
TOS is not compatible with macintosh disk format. However modern Macs
are supplied with a system extension that allows reading and writing
MS-DOS disks which are compatible with TOS (See section 3.1.1).

3.1.3 Serial port file transfer
-----
Another way of exchanging files between ST and PC is to use the serial
port with a null modem cable. Ghostlink will do this and can be found at
your favourite FTP site (see section 2.2).

3.2 How can I hook up my ST to the Internet ?
---------------------------------------

The ST can be used to send and receive email, read usenet newsgroups,
download from FTP archives, and even to surf the web.

There is a whole lot of internet resources on the subject:

The Atari Internet guide
http://zippy.spods.dcs.kcl.ac.uk/~garfield/aig/aig.htm

The Atari Connection
http://www.cedep.com/~gstamant/atari/atanet_e.htm

The good old Atari ST FAQ
ftp://ftp.sn.no/user/hallvart/atari/info/n_faq2.txt

Internet Software for Atari
http://localhost.ruhr.de/~sacha/index_e.html

The STiK support page
http://www.flinny.demon.co.uk/

3.3 Where are the Atari Web Pages ?
------------------------------

Atari Jagwire (for Jaguar support only)
http://www.atari.com

The Atari ST Launchpad
http://home.sn.no/~hallvart/pages/atari.html

Atari Internet Resource Guide
http://www-und.ida.liu.se/~t94patsa/atari.html

Atari on the Web
http://www.mcc.ac.uk/~dlms/atari.html

FujiZone
http://www.users.zetnet.co.uk/fujizone/

Have you seen the person formerly known as Sinclap, who spouted out about audio production on the Mac vs. Falcon without actually knowing any facts? His argument was simply destroyed in this newsgroup.

Of course, he NEVER RESPONDED. I would be happy to repost if he would be interested in responding.. but in order to do so, he would have to confess his lack of knowledge, something it seems he is unlikely to do.

Now this post was just a test too.. :)

I think you'll notice now that ol' Sinclap now has a new service
provider - since he no longer posts from the University of Indiana.

This means that, should Sinclap try to inject his unwelcome rants
in this conference again (which is, as we all know, against the c.s.a.s
charter), a quick letter of complaint to his ISP should soon sort him
out.

And remember - his kind of rants are NOT covered under the First
Amendment of the Constitution, as laid out in the 1974 US Supreme Court
decision FCC vs. Pacifica (as you know, Sinclap is considered a "public
nuisance", and therefore falls under that decision). So he can't wrap
himself in the flag as an excuse.

Note too that DejaNews also is a great way to gather evidence to
show the provider just what sort of history this loser has :)

## 5935. 1040 Drives

Newsgroup: comp.sys.atari.st
Date: 1997-03-28 00:00:00 UTC
From: David Anderson <DRCAnderson@xtra.co.nz>
Message-ID: <333AC8C3.323@xtra.co.nz>
Source record: 124991

For some 10 years I've been using ST's for music. Started with an upgraded 520 with single sided external SF 354 drive and have only in the last couple of years moved to second hand 1040's. The first one lasted less than a year until its disk drive gave up, and now the second one a matter of months and the drive is giving problems. I am very careful with how I use it - any ideas?

(i) Is there any specific drive weakness that can be pin pointed?

(ii) Any upgrade that I could do or get done to these drives?

I'd appreciate any pointers anyone can offer.

If you still need a rc file, please email me. I have two of'em ;-) ( Two different setups) Also, I would like to know if you own a Hades? If you do, you definitely have to email me and tell me how it works!! I have plans to buy one of them, but have no info on what works or not. If MiNT doesn't work with the Hades, I don't think I want it. Please info me on it.

If you have managed to get MiNTnet up and running, don't even think about going back to Oasis. Whatsmore, gluestik is curretly at v0.02b1 and it's working perfectly for me. All the STiK clients I have tested with it works like a dream. I haven't tested CAB with it though, cause I use the CAB for MiNTnet overlay v1.7700 and I think it is faster with this overlay than with one that uses STiK.

The beauty of it all is that I can use both STiK clients and MiNTnet clients as I wish ;-)

Or you could try a different approach. Install MiNT and MiNTnet, then get the latest version of CAB for MiNTnet overlay. I use this setup and have never seen the #600 error. What's more, you can get GlueSTiK and run all STiK clients over a PPP link in parallel with the usual MiNT clients (like IrcII). If you do install gluestik, don't cange the OVL for CAB. I have a feeling it works more perfectly with the OVL for mint than the ones for STiK.

Well, I hate to tell you that Atari Corp. doesn't exists anymore. But the TOS platform is far from dead! Software is being developed and there has appeared TOS-clones, far more powerful than the Atari's themselves. You could check out the Hades, f.e. at eiher Medusas page, http://www.ee.ethz.ch/~caschwan/medusa.html or you could check out Computer Direct's pages at http://compdirect.com/. The Medusa company is located in Switzerland and Computer Direct is in Cananda. Computer Direct's Direct060 is the same as the Hades. As for software, you should check out Hallvard Tangeraas's home page at http://home.sn.no/~hallvart/pages/atari.html. This page contains links to every important Hard/Software companies that deal with Atari stuff.

Take a look at the above mentioned pages and regret you ever abandoned the Atari platform.... ;-)

Not being a systems-level kind of guy, I don't know if this is reasonable -
but how hard would it be to write an AUTO-folder patch for TOS to implement
these changes? It doesn't sound all that complex, really.

Actually, that's rather a lot more distance than necessary. A 10-cm
(6-inch) drop is usually enough.

Let's see what I can do...

>Screen Resolutions:
>High: 640x400/Monochrome on dedicated monitor,
>Medium: 640x200/4 colours on colour monitor or TV,
>Low: 320x200/16 colours on colour monitor or TV,
>512 colour palette (4096 on STe, MegaSTe, TT)
>Other resolutions are available on TT, and Falcon computers.

TT includes all three ST rezzes plus TT low (320x480x256), TT medium
(640x480x16 or "plain VGA") and TT high (1280x960x2 requiring an ECL
monitor).

The Falcon handles all ST modes plus numerous others, most importantly
640x480x256 and the 16-bit "true color" (palette-less) modes which
permit 65,536 simultaneous colors; a total palette of 262,144 colors are
available.

> 1.2.2 Atari Monitors
>
>Monochrome (640x400 colours) requires special Atari high resolution
>70Hz monitors (SM models).

Except on the TT and Falcon, which can display ST high rez on a VGA or
better monitor.

>Falcons are VGA and need an adaptor to use Atari SC/SM monitors.

Actually, Falcons have a proprietary 19-pin monitor port and need an
adapter for either SC/SM or VGA monitors (two different adapter blocks).

>Falcons use VGA monitors as standard

That's more true of the TT.

>1.4 Can I run Atari ST software on my PC/Mac/Unix box ?

This part of it seems to be in the BIOS. I have three systems hooked up in
a MIDI ring and use MIDIcom to network them; when I'm running MiNTnet on the
Falcon, however, I can't use MIDIcom (it hangs during initialization);
however, the other two systems can still talk to each other, even though the
networking software isn't installed on the Falcon's leg of the triangle.

There's still physical wear from the drive head sliding over the media, Sid.
You're entitled to make and use a backup copy - that way, your master disk
won't be worn out when you /do/ need it for an emergency.

Absolutely! The volume is perhaps not as great as it one was, but the
quality is higher than ever before.

>And hasn't Atari now been bought out by some another company
>somewhat recently??

Actually, no, Jack Tramiel leveraged Atari stcok and cash agaisnt JTS
Technologies, and then converted Atari stock to JTS. So, while the
company name has disappeared for all intents, the actual ownership is
Atari.

>IF anyone could provide me a little information and
>what I have missed in the past few years, that would be most

# 5952. New CAB v2.0 Demo available!

Newsgroup: comp.sys.atari.st
Date: 1997-03-28 00:00:00 UTC
From: csilver@kendaco.telebyte.Spam.This.com
Message-ID: <5hg35d$4ct@news.telebyte.com>
Source record: 125008

Hi Kemosabes,

First, I must say I have the utmost respect for Alex Clauss. However, I will leave the judgement for the new CAB V2.0 Demo to you. I've just tried some "frame" web sites and I'm interested in your opinion.

http://www.suck.com/ ( No pun intended, It's really a "groovey site" )
http://www.lax.net/~drac23/warez/dragon_warez.htm ( You want it??? Seems to be the topic of choice. Benito Pablo Ju&#65533;rez must be turning in his grave, a TRUE Mexican HERO! )

http://www.qvc.com/ ( Not frames, just not CAB friendly )
http://www.gaelic.com/ ( Another toughie that makes CAB belch, ah hurl? )

IMHO, CAB is only as good as it's online OVL ;) The rsc file is in German, but that shouldn't be a problem for long time CAB users. I tried several OVL's with various results. This is NOT a comprehensive test and I plan on buying the new CAB once I've had a few questions answered.

And so it goes,

Charles

URL: <http://www.clark.net/pub/lawrencc/linux/faq/faq.html>

-----BEGIN PGP SIGNED MESSAGE-----

Linux/m68k is the port of the popular Linux operating system to
computers using the Motorola 68020, 68030, 68040 and 68060 CPUs.
Current releases support Amiga, Atari and Motorola VME systems (MVME
147, 162, 166 and 167); ports are underway to the Apple Macintosh, the
HP/Apollo Domain workstation, and the Sun 3 series of workstations.

The current FAQ is available on the World Wide Web at:

http://www.clark.net/pub/lawrencc/linux/faq/faq.html

Conversions of the FAQ into various formats (plain text, PostScript
and DVI) are available at:

ftp://ftp.clark.net/pub/lawrencc/linux/faq/

The plain text version of the FAQ can also be found at all Linux/m68k
FTP sites and mirrors as "FAQ" or "FAQ.gz" (compressed with GNU gzip).

Questions and comments about this post or the FAQ may be directed to
me. General questions about Linux/m68k may be posted to the Usenet
newsgroup comp.os.linux.m68k.

'Til next time,

Chris Lawrence
Linux/m68k FAQ Maintainer

No bloody chance.

The admins at DejaNews and Petey-boy's new ISP (which is a freenet, of
sorts, BTW, cedarnet.org - cheap bastard apparently won't spend any
money to come here to insult our intelligence) are already apprised of
his past performance as revealed in a user profile form - of all places
- the very DejaNews he was posting from.

So, in spite of any idiot comments to the contrary, he has very little
chance of lasting out the month of April, should he continue with his
previous character traits.

<5h6pt0$4og@bore.pipex.net>...

> I wonder if someone can help me??

Generally I've fixed problems like this by reseating the various socketed chips within the
PC. This is not rocket science. Take the "keyboard" apart by removing all the screws after you have unplugged everything (especially AC power). Take the real keyboard off by unplugging the connector (Yechh, might be a good time to clean the keyboard too).
Take the RF shield off. Press down with your thumb on all the little square black things--most of them will crackle slightly as they reseat. Now is a good time to check for the bronze hold down straps on the big square chips (like the CPU). The older machines didn't have them, and they desperately need them. You can order them fairly cheaply if you need them. Wiggle anything else you feel like wiggling, clean out any crud that's snuck past all the shielding, and put it together again. I used to do this to an old 520 I had fairly regularly. Of course, if I was in a hurry I would just raise one side about six inches above the desk and let it drop. I usually used the left side. I don't recommend this procedure with an internal diskette drive however.

It sounds like what you need is something like Ghostlink, that allows you to
access the Unix workstation like it was a drive on the STs desktop.

Bad news: Ghostlink is for connecting PCs. I'm not sure if there is any
equivalent to it for Unix.

# 5958. FS: Atari Computer Goods! Some Shown! FREE Catalogs!

Newsgroup: comp.sys.atari.st
Date: 1997-03-28 00:00:00 UTC
From: bensmith@kelly.teleport.com
Message-ID: <5hgcm1$pv6$1@kelly.teleport.com>
Source record: 125014
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I

will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

# 5959. FS: SCSI to DMA boxes

Newsgroup: comp.sys.atari.st
Date: 1997-03-28 00:00:00 UTC
From: Joe Bresler <joe@rockridge.com>
Message-ID: <01bc3b53$a7024740$309b9ccc@joe.poppe.com>
Source record: 125015
Cross-posted to: comp.sys.atari.st,maus.sys.atari.hardware

I've got two SCSI to DMA boxes available. They have been maintained in a smoke free environment (no smell of smoke, for those with allergies).

These items are sold AS IS. they are opened up right now, and one has a syquest drive in it. You'll need to get some screws to seal them up again. They are the size of a Mega's CPU box. They are medium grey in color. You'll need to get the 50 pin ribbon cables to connect your peripherals, and you'll need to provide the power cables. You'll also need to get the DMA to DMA cable to connect them to your computer. These would be perfect for a CD ROM.

$40 for both, or best offer. You pay COD and shipping charges.

Email for more info or to order. jbresler@best.com

Thanks!
Joe

Sounds somewhat familiar. I thought the same the other day when reading a
group from the german Mausnet (maus.sys.atari.software).

Cheers Peter

Updated yet again

This page is almost complete, with one more section to be added, and
then links to all the back issues that are going to be uploaded to
cnam.fr

FALCON owners should boot ST+ from ATARI ST Low rez, nothing else
need be done, thanks to Dave Gostl <dbg01@gnofn.org> for that snippet,
so any Falcon owners already downloaded, thats the way to do it! :)

Cheers !ynoT ( ATARI Programmer )

Due to populor demand <ahem!> H.E.R.O. 2 has begun, you can check out my page for a one level demo, this is very testing stage? so please dont download if its costing you money because you may be dissapointed,

The game is being brought back to life for Falcon and TT, Mega and TOS206 users who didnt get too much out of it last time around, so far only Falcon owners have come forward to test, ?

The game is to be compiled to work on the following TOS versions,

1.00, 1.01, 1.02, 1.04, 1.06, 1.62, 2.05, 2.06, 3.01, 3.06, 4.01, 4.02, 4.04 and 4.92

This is only possible to to the exceptional compiler enhancements by Anthony Jacques,

Feedback to date from the first demo, although not fully succesfull, does lead me to beleive there wont be too many problems :) hmmmmm?

Because I do not have a Falcon I cannot possibly enhance the game to take advantage of its capabilities, But I do have a 4meg STe <yawn> and the game will definatly have to go over one meg because chip music is to be fully replaced by lots of sampled sound,

Anyway check out the page, check out the one level demo...if you want to take the chance?, and check out the HERO DIARY :)

Cheers !ynoT ( ATARI Programmer )

re: dropping ST from 3 inches or 3 feet....

I just bought my first 1024 with monitor/drive for $39 Canadian.

It works fine, and I will now ask my friend to borrow some of his long forgotten Midi disks....so I can finally putter with music.

I wonder if an Intel technician would recommend dropping a Pentium to reset the chips :) hahaa

Anyhow....I am about to look for the freeware/shareware midi programs (am currently using my PC, so I don't think the process to get into my ST will be easy....I know its apparently easy)

bye fer' now

don
canada

PS: I also bought an old electric piano (Roland 700) but the sound thru headphones is really quiet....I knew this when I bought it for $45, but I shook the keyboard but nothing seemed to reset :) Anyone, know what the problem is ...need new chip/....or more diagnosis needed ?

muchobleeged

# 5966. Re: MiNTNet/GlueSTiK/CAB v1.50

>process to reach this goal, I would appreciate some help. I'm just plain
>tired of using Lynx. I want to view the Web as it shoudl be viewed on an
>Atari; IN LIVING COLOR!

Step by step:

1. Download PPPkit14 and GlueSTiK. Both of them are at my ftp site
(see below) but you might be well-off to get GlueSTiK direct from the
author's site if you want the very latest version.

2. Unzip PPPkit onto drive D: (so there's less to edit).

3. Unzip GlueSTiK anywhere, but into its own folder.

4. Create the folder C:\MINT

4. Read the simple directions that come with PPPkit and follow them.
Believe it or not, it's easy!

Other things you should have include HSmodem7 and fser96b (which should
be in your AUTO folder before DRVIN.PRG - its drivers will be replaced
by HSmodem, but the proper cookie will be set so that the FastSer.CPX
can be used).

From: tom.derrick@acpu.com
Message-ID: <859607706@acpu.com>
Source record: 124946

Hi, everybody. I would like to try my Spectre on my TT, but I have
been unable to acquire v3.0 of the software. I know that it is not
public domain; David Small and Sandy own the copyright, according to
his post of some time back. I sent a check to Gadgets by Small a
while back, but the software never came (and the check was never
cashed, so I am /not/ screaming). Does anyone have any suggestions?
I don't really want to buy another Spectre; this one works fine on
my ST. If David would respond, I would appreciate it. Anybody else?

No, I am not making a request for a pirate copy, without using the
words. I am perfectly willing to buy v3; I just don't know any
source for a legal copy. If the software can only be purchased with
a Spectre, does anybody have one for cheap? Or can the software be
transferred /legally/ to a Spectre owner? Dave?

OK, I have spent a few minutes to try this new beast ...
The problems is :

CAB doesn't seem to show the pictures at the first download, and a
friend a mine (Martin Byttebier) says the same, he must resize the
window to make the pictures becoming visible ... and sometimes you
must use the 'reload' button.

>I never realized Blake's 7 was a sitcom!

Yo John,

I guess it depends on whether you view it in Low or Med Rez and how much RAM Memory you have. Blake 7 is a Sci-Fi Drama. Unless, of course, you don't like the humor between Avon and Orac, everyone's favorite plexiglass computer :) Blake is all business as he must destroy the Federation and the High Commander, Servalon(spelling?). If your listening Servalon my phone number is 1-800-True-Luv! What a babe! No STiKFree errors here.

Don't forget Dr. Who, he uses more one liners than than Rodney Dangerfield or Benny Hill (RIP). British humor, it's just different than "Seinfeld".

Sitcom? It just depends on your OS...

Running in circles,

Charles

# 5976. Can an Atari ST be used on the Internet?

Newsgroup: comp.sys.atari.st
Date: 1997-03-29 00:00:00 UTC
From: RLee3846@AOL.COM
Message-ID: <859617601.12838@dejanews.com>
Source record: 124950
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I've been using a PC for several years, but I have an Atari ST (MEGA ST2) sitting around and I was wondering if it could be used to get onto the internet(for my kids). I recall that GENIE and COMPUSERVE once supported this platform.

If it is possible, how well would it work, what would I need to do, etc. Any helpful info would be greatly appreciated.
I have an old modem (Atari 1200?) somewhere, but of course I would think something faster would make sense.(Any external modem plugged into the serial port? -but how about the software?) How about the internet service provider? Anyone have any suggestions?
It really was/is a good computer but unfortunately, not well supported.

Thanks for any help - RLee3846@AOL.com

Don't want oget too far off topic, but...

All this talk of Pak 30 and 10 mB of RAM gets me dreaming. Love to have that kind of rig when doing a 56 page book in Calamus. But I still use Notator SL for music. I have installed the ICD 16mHz upgrade board in my 1040 STe (1.62) despite warnings that my Notator wouldn't run with the upgrade installed.

Well that isn't true at all. With the supplied CPX module and also with pre-arranged boot functions the 16mHz can be retro'ed back to 8 mHz and Notator runs fine.

Has anyone tried this with the PAK 030 setup...?

From: Destiny <destiny@digital.net>
Message-ID: <333D6C12.5B2@digital.net>
Source record: 124955

I am looking for a Falcon MK II or MK X ( I think ) for doing midi
sequencing on.

Must have internal or external hard drive, at least one floppy,
a monitor, 4 meg of RAM and a mouse. Having Cubase any version
is a big plus along with other midi software. Will be using for
sequencing.

For trade:
Dauphin DTR-1 palm top computer.

486SLC-25 with 4 meg ram
internal 40 meg HP kitty hawk drive double spaced to 80
built in 2400 baud modem/9600 fax
built in ethernet port (10 base T)
built in VGA 640x480 grey screen LCD
oak super vga video port, parallel port, serial port
floppy/ide port, keyboard port and power hookup.
has cordless pointer that works like a mouse
unit is 8 inches by 6 inches and has plastic hard cover
and case which holds an external keyboard (small). Has
external attaching floppy drive (1.44) and i built a
cd rom cable for it. Also included will be an
external 14.4 modem.

includes windows 3.1. I have run linux and windows 95
on the machine with the use of a zip drive.

If I get many offers, I will trade to the first one
that has lots of midi software in the trade.

USA and I guess Canada offers only, I am in Florida.
Picture of part of it found at
http://www.eskimo.com/~toby/dtr1/images/dtr1.gif

Email me for more details and/or questions. Thanks very much. Also, if
this isn't the correct location for this type of posting, please tell me
where to post this.

Thanks
Rick

Definitely. You can make a Pentium go faster if you drop it from a
higher altitude.

>PS: I also bought an old electric piano (Roland 700) but the sound thru

Try a different pair of headphones - the new ones designed for Walkmans.
I suspect the jack is meant for line-level out to an amp, and it won't
drive "standard" headphones to a very high volume.

Yeah, I have noticed exactly the same. That was very disappointing to me. I'll wait until this is sorted out before testing it again. One other thing is that CAB doesn't seem to cope having it's cache on a MinixFS partition. Anybody?

# 5989. ST memory upgrade

Newsgroup: comp.sys.atari.st
Date: 1997-03-29 00:00:00 UTC
From: "Bob.Peilow" <bob.peilow@dial.pipex.com>
Message-ID: <01bc3c9b$2e637a40$2af882c1@default>
Source record: 124963
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Can anyone help with a memory upgrade? I'm looking for at least 0.5 meg for an STFM.

Ideally I'd like more than that, or one of the add-in SIMM sockets that Evesham Micros did about 5 years ago (I've asked, they sold them all)

I don't mind second hand or stuff that has been sitting in a stock room for a while, as long as it works!

email bob.peilow@dial.pipex.com or djp495@soton.ac.uk if you have anything.

Cheers
Dave Peilow

Hi all!

Seems that I have to make a statement here...

I&#65533;ve removed the CAB v2.0 Demo from my homepage after a few hours.
I thought... it was o.k. Maybe it is? Can someone tell me if it&#65533;s o.k to
implement this version at my homepage?

This version is The CeBIT&#65533;97 free version that ASH throwed away on
every one passed by.

If You read maus.sys.atari.software, it seems that every German enthusiast
have this demo version.

By the way... Notify that this version is a february release and several
improvments have been done with CAB.

...and again, tell me if it&#65533;s o.k. and I will put it at my homepage...

Best regards
Mille Babic

# 5993. Re: STiK alive?

Newsgroup: comp.sys.atari.st
Date: 1997-03-29 00:00:00 UTC
From: q-funk@megacom.net
Message-ID: <5hjjm2$3sl$1@cti01.citenet.net>
Source record: 124967

To make a long story short:

The last update, STiK 1.13, proved unstable under MagiC when using multi-tasking and it was decided not to release it.

Since then, STiK 2.00 is taking shape under our core team of seven people from Australia, Canada, Germany, Sweden, UK and United States.

STiK 2.00 will finally implement CSLIP and PPP. Several crude alpha-versions are presently being tested, with new features and bug fixes added every couple of days or so.

Right now, the PAP and CHAP login authentification protocols are proving harder to implement than was thought, and since most providers need them to initiate a PPP connection, those are delaying the public release of a PPP-capable STiK.

Next comes Van Jacobsen compression. Again, this other scheme is required by many providers and must be added to the TCP/IP stack, which requires additional testing time.

Ultimately though, as Nicholas Flintham previously observed, STiK is being developed in people's spare time, between some university thesis writing, college homeworks, PC repairs day job, and *Heck* we all have wives, girlfriends and some here even have kids that need parental attention.

Of course, if ASH, HiSoft and other software companies would hire us all and free us from the above daily burdens in same process, then we could probably have an excellent STiK 2.00a coded in litteraly a matter of days.

But given our past experience involving a certain Steve Adam having to return home to live with his parents when software companies would not commit to a firm contract and some money upfront to have STiK become a professional program, we found ourselves taking over Steve's initial product through hobby.

Therefore, unless a software company is willing to actually:

a) Hire us with some good money upfront.

b) Commit to keeping STiK affordable.

c) Commit to making multi-lingual docs,
for a commercial release, or pay us
coders to write it ourselves.

people are simply gonna have to be patient, or else install a
MiNT/PPPkit/GlueSTiK combo when PPP is the only option, which
is the bottom line.

If people really view STiK as something as valuable as HD-Driver,
NVDI or Diamond Edge, then the software publishers are gonna have
to commit themselves somewhere along the line.

But the current way ASH has chosen by getting their own TCP/IP
stack coded, instead of actually contacting ourselves,is simply
beyond me. Perhaps someone from ASH could answer that one?

yours truely,

Martin-Eric

Unfortunately, I don't own CuBase Audio. The Syjet had no trouble
recording using FalconD2D at 50KHz. In file copying tests, the Syjet
was 10 percent faster than the internal IDE drive. It took 57 second
to copy 32 MB of files from the IDE to the Syjet, but only 52 seconds
to copy the same files from one Syjet partition to another.
The advertised access time for the Syjet is 12 ms.

Hi Jo and All,

I tested v2.0 at Digital Research's web site and there seems to be a miss-handling of the Image Input [<Input Type= "image"> not supported] feature which causes you to have to reload a Web page inorder to get the gif's to show. The "frames" work fine.

Just having some fun testing the new CABv2.0 and have an idea that might help others. I run the new CAB first, then use the DATEI (FILE) button to run cab.app(v1.5) on top of v2.0. Both share the same wwwcache. This way you can surf using your Hotlist file and find sites than you want to test with v2.0. When you quit 1.5 you'll automatically be back to v2.0 and the site you want to test will be in the cache. Then you can compare them. While doing this I realized that the Hotlist file is just a linked HTML, uh uh hmmm. I think you can see where I'm going with this :)

Another "frame" site: http://www.pepsi.com/
Follow "whatsnewtext.html" then "Lala Land".(Then reload to see all gif's)

All in all, I really like the new CAB and with the Modules you can add, it's becoming more complete. BTW, in the doc's Alex mentions he doesn't have a modem to test CAB online. If this is still true will someone get the man a good Modem so he can test his excellent work...

Bitte danke,

Charles

Delete the mail password in your Newsie setup and enter it manually when
you check mail. It's probably redundant to remind you that it's
case-sensitive.

Newsie is up to version 0.72, also, so you might want to update.

>
>If it is possible, how well would it work, what would I need to do, etc.
>Any helpful info would be greatly appreciated.

Recommended: PPPkit14 and GlueSTiK for the TCP/IP stack and interface to various clients; CAB, Newsie, Antmail (optional) and DuFTP (also optional). Most of what you will need is at my ftp site - see sig below. Also highly recommended is HSmodem 0.7 (also at the ftp site).

>I have an old modem (Atari 1200?) somewhere, but of course I would think
>something faster would make sense.(Any external modem plugged into the
>serial port? -but how about the software?) How about the internet

14400 is cheap these days and most of the existing modems will work - haunt garage sales until you find one that suits you. I paid $3 for the Supra 144LC that I keep in reserve.

>service provider? Anyone have any suggestions?

Almost any ISP - but ask them two things before you plunk your money down - (1) do they have local offices, and (2) who is their upstram provider. Avoid ISPs connected through AGIS and Sprintlink; both of those are in serious danger of being cut off from the Internet for all intents due to their lackadaisiacal (in the case of AGIS, encouraging) attitudes towards spam. Sprint is getting better but the still s*ck.

GEnie and CIS should be fine - although they cost more than many small ISPs and provide somewhat less persoanl service.

>It really was/is a good computer but unfortunately, not well supported.

If you refer to commercial support, you're correct - but the ST paltform has an EXTREMELY high percentage of user/developers, so software support is, if anything, better than ever.

It doesn't work with GlueStiK at all - apparently some strange things
were done that prevent it from seeing the stack.

I wonder if people who comment of the Newton's hand writting recognition
accuracy have used one for any length of time. People do realise that it
uses a neural network to learn how to recognize an individual's writting
and you probably have to use it a week to fully train it, right?

No one cares, Brian. It's not an Atari, it's not a TOS clone, it's not even an ST emulator runing on a <spit> Windozzzze box.

There are advocacy groups for thios sort of thing, and I for one would deeply appreciate it if people would keep their "My computer is better than your computer" discussions confined to those places.

Of course, if anyone were to give it a bit of thought, they'd realize that whoever says "MCIBTYC" is /always/ right - either that, or he's an idiot. After all, if it weren't the best computer for the job the user wants o do, why in H*ll is he using it?

Thus, the best computer is the Commodore PET. Or the Timex 1000. Or the IMSAI 8080. Or the Cray YMP.

But if it doesn't say "Atari" on the box, use TOS, or emulate one of the above,

WE
DON'T
BLOODY
CARE!

Really,well now add tax to that $445, then the cost of a serial cable and ac adapter and the cost of ACT for palmtops,the cost of a 14.4 fax modem and a 4 meg flash ram card and the Simtel cd-rom of dos programs and your probably looking at nearer $600,so $450 is a fair price,but as I said I'm looking for offers.Lastly,have you actually confirmed the price at Office Max or are you just going on hearsay? Was that a 2meg or was it just a 1 meg? Here in Canada I'm still seeing the 2meg HP selling for approx. $850 cdn($640us approx.)

i used to use an st and yes, it can be used on the net, not very good for
the web because of memory restraints but it's as good as anything else
otherwise.
as for the software, i'd have to look into that.

Frames does work fine, but CAB 2.0 does some very strange things. On
my TT I can't make it work under singletasking. I always get a runtime
163 error message. However under a multitasking system (I've tried
Geneva and N_AES) it works.
Furthermore CAB 2.0 displays e.g. columms of buttoms on one row
(fortunately not with every page)
Where are the colors in the source display? Viewing the source one
can't use the back buttom (with CAB 1.5 this was possible).
Using CAB 2.0 on a monochrome screen is quite disasterous (at least on
my TT) It does display the background where CAB 1.5 was so friendly to
not display the background. Can you imagine how it looks like if one
have download a page with a black background.
These are a few thing I've found.

Sorry Slight case of tunnel vision,(is that what its called?) I am still thinking this group is for all things ATARI, however yes I am aware that Jaguars have there own group <smile>

Then again, get all your news in c.s.a.*ST* today, count how many have anything to do with ATARI ST computers? ,Remembering that falcons, hades or any other computer, including TT STONX UNIX or whatever are not ATARI ST Computers,

In fact if we remove EVERYTHING that has nothing to do with actual ATARI STs then there wont be that much left,

So where do all the "wannabe" moderators draw the line?

BTW Rich not EVERY post of yours is 100 percent ATARI ST related, IMHO anyone setting themselves up as an unofficial moderator should be making sure that they.....well ?

>networking programs, operating systems, and games."

>Go ahead, post your email addresses here for the whole world to see, and ask
>for pirated software. We don't mind. Why should we? You'll be gone
>soon...

Oh my God...I'm going to jail because I've asked for a software
program that's over 10 years old for a computer 99% of the public
didn't a shit about when it was new...Oh, horrors!

I can just imagine the FBI is out there planning a raid on my computer
to sieze my pirate copy of Starglider...oh man, what am I gonna do? I
hope they don't find my other 300 disks...

Wait...somebody just kicked my front door in. I wonder who - Hey! Get
your hands off of me!

Boy, I'm in for it now!

Seriously folks, I realize you all love your computers - I was one of
the first people to own an ST in the summer of '85 and I still enjoy
it very much. But, get a freaking grip and realize that the software
market for this machine is DEAD, DEAD, DEAD! It has been for for
several years. That's no excuse for piracy, but don't think for a
second that any Federal agency gives a rats ass about pirated ST
stuff.

If you want to preach about pirating 1986 software, and post demented messages like the above, so be it...but it doesn't scare ME any. Especially since C64 software, (the most popular computer ever, by the way) is on so many web pages, it makes my head spin.

I want to run all my old favorites on the new emulators, and will go to any lengths to do so. If I bought the program the first time around, downloading it 10 years later from the Net doesn't bother my conscience in the least.

Have a nice day...I'm off to the computer store to look at all the cool new ST stuff...

>process to reach this goal, I would appreciate some help. I'm just plain
>tired of using Lynx. I want to view the Web as it shoudl be viewed on an
>Atari; IN LIVING COLOR!

Hoi,

I'm not going to explain how to install MiNT/mintnet. As you're using
Lynx I suppose you've already a working MiNT/mintnet. If not download
pppkit1.4 or KGMD2 (and the related files) and follow the installation
docs. These kits claims to be very easy to install. You can find these
things on ftp.cnam.fr pub/Atari
Normally you don't need to use gluestik if you just using CAB. There
exist a special cab-for-mintnet overlay somewhere on the Net
(ftp.cnam.fr?) Replace the cab.ovl as delivered with the CAB package
with the mint cab.ovl (yes the same name but much larger).
But I recommend you to use Gluestik in conjunction with the common
cab.ovl. On my TT this combination has proven to be far more better
then the Cab/cab-for-mintnet overlay combination.
Now to use Gluestik just copy the two drivers (gsdaemon.prg and
gsdriver.exe) to the root of your bootpartition in a dir called
gluestik (or whatever).
Add the following lines to your mint.cnf

exec c:\gluestik\gsdaemon.prg
exec c:\gluestik\gsdriver.exe

Also create on the root of your bootpartition a dir called stik_cfg.
Inside this dir create a file default.cfg. (You can use the one
delivered with the STiK package) This file should contain at least the
following line
ALLOCMEM = 50000
Be aware some STiK applications needs more in order to work.

I thinks that's about all
BTW: Don't use the stik.acc and the stiktsr.prg (autofolder) otherwise

gluestik won't work. I've make this fault.
Gluestik is now at version 0.02b4 and can be found at
http://www.cs.duke.edu/~dsb/files/

Hope this helps
Martin

Which one did you buy? And you know, I bet that we could form a company that develops software that looks at people's sigs and decides what changes need to be made to their email address valid. We could sell it to those internet marketing companies and make a million bucks.

## 6020. Mailto with CAB/gluestik?

Newsgroup: comp.sys.atari.st
Date: 1997-03-30 00:00:00 UTC
From: Martin.Byttebier@ping.be
Message-ID: <859746368_OASIS_@ping.be>
Source record: 124898

Hello everyone,

AFAIK, cab.ovl can handle mailto. Right?
But in conjunction with MiNT/mintnet/gluestik it seems not to work.
I always getting something like <Transaction failed> and there after
<read error in file ''>.
I use cab.ovl v1.21 and gluestik v0.02b4
What I'm doing wrong?

The default.cfg I use looks like below

```
##########################MY DEFAULT.CFG##############################
#
ALLOCMEM = 50000
#
# If SERIALPORT is not set, or has an invalid port name,
# the default is to use the first port listed by listport.tos
# So if that port is the one you want to use, you don't need
# to set this variable.
#
SERIALPORT = Serial 2
#
#
# CDVALID Set this variable to FALSE if your modem doesn't assert
# Carrier Detect properly.
CDVALID = TRUE
#
# TCP paramaters. Don't change without advice from a TCP freak :-)
# If left unset, they default to hardcoded (sensible) values.
# DFB_SIZE should *never* be less than 580.
#
TTL = 64
PING_TTL = 255
MTU = 252
MSS = 212
PKT_SIZE = 256
DFB_SIZE = 580
RCV_WND = 2000

PROVIDER = 193.74.114.1
#
# Don't bother to set these unless there are different to PROVIDER
# Nameserver currently has no effect!!
#
#NAMESERVER =
```

```
POPSERVER = 193.74.114.4
#SMTPSERVER =
#NEWSSERVER =
#
# Some POP variables. Important for getting mail!!
#
# POP_MAILBOX is the name of the file where new mail should go.
# New mail is appended to the file.
#
POP_USERNAME = my logname
POP_PASSWORD = my password
#POP_MAILBOX = spool\mail\nick.txt
#
#
# SMTP mailpath. Directory for outgoing messages
#
SMTP_MAILPATH = spool\mqueue
#
##########################END OF DEFAULT.CFG##########################

>It CERTAINLY works with Gluestik (v0.02b4)

My setup:

Falcon030/14 meg
FreeMiNT 1.12.(2?)
GlueSTiK 0.02b2

No flickering lights on the modem when using CABdemo 2.0, unable to find the page. Exact same page with CAB 1.5, no problems at all. And sicne I'm currently writing this article in Newsie and using that set up to post it, the conclusion is left as an exercise for the reader.

Note that I am not using GlueSTiK o.02b4 because it /causes/ the problems that were reported to be caused by 0.02b2 - but which do not happen here with the older version.

How about going with a shareware fee? Right now, you're relying on voluntary donations, nyet? Naturally, I'd prefer free - but 2.0 with all the features you have named is worth money to me.

>But the current way ASH has chosen by getting their own TCP/IP
>stack coded, instead of actually contacting ourselves,is simply
>beyond me. Perhaps someone from ASH could answer that one?

Obviously, I'm not ASH - but they have demonstrated a certain unconcern with public opinion, I think. I'm glad they've finally decided to pay Alexander for CAB development; I don't understand why they don't care about non-German-speaking customers, nor why they don't want to develop an existing stack. Starting development from scratch is almost always more expensive than improving an existing product, as anyone who has ever written software can tell you, so AHS's current behavior seems very odd.

Shouldn't this be 2-20M ram? With the standard Atari memory cards, I think you
can have 4Mb of ST-RAM and 16Mb of TT-RAM, totally 20Mb.

Hi,- just had 2 test run with the new CAB, some improvements, but yes, it seems to have trouble with some webpages, not sure if it is every time?

I do think it's a little better, and I'm going to buy it, when I figure out where to get a english version. I'm to lazy to hack the resource file myself.

CAB 2.0 seems to have problems with font sizing. In my own web page, I use mostly one size throughout, but near the end I have a paragraph in a larger font (font size="+1") and then back to the smaller font, (font size="-1"). The problem is, CAB ignores the first size change and then executes a font change (increase) when I coded a decrease.

I was planning on contacting ASH. I'm sure this demo is also somewhat a beta release.

Its only strange when you consider the author considered the email
name (name@domain) to be the same as the account name. For me they are
both 'rojewski', but I now recognize some ISPs handle things
differently.

I will be putting an 'Account Name' field into the Personal
Preferences due to this "flexibility" in account name/emaild id
situation.

> can have 4Mb of ST-RAM and 16Mb of TT-RAM, totally 20Mb.

The confusion comes with having two banks of RAM. The "ST Ram" is
configured for 24 bit addressing to make it backwards compatible for
software made for the older STs and Megas, and used
surface mounted DRAMs mounted on a board situated on the right hand side
of the machine, just under the hard disk. Machines were issued with 4 or
10 megs of Ram in this bank.

The "TT Ram" is configured for 32 bit addressing and requires the use of a
daughter board situated on the left hand side of the machine, which
accepts four 30 pin SIMMs, which can be any value up to 64 megs. Thus,
the max amount of ram you can have in one of these machines is 266 megs -
10 megs of "ST Ram" and 4x64=256 megs of "TT Ram".

The Thirty-two bit addressing coupled with the 32 bit internal processing
bus rendered the name "TT" for Thirty-two/thirty-two, as opposed to the
Sixteen/Thirty-two arrangement of the ST.

Hi there. I've just downloaded Shutdown 1.5 and will check it out. But I'm curious as to what "AVSERVER.APP" does. It's also for MagiC 4 but since my German is only slightly better than my Chinese, I can't really decipher the text enough to tell what it's for.

Do you know?

Thanks

oskancke@sn.no (Odd Skancke) stated
>>Mega STe 16 1-4Mb S 2.06 1.44Mb MBE VKTC TT style case.
>>TT030 32/030 2-10Mb S 3.06 1.44Mb E VKTC Various mem/HD configs
> ^^
>Shouldn't this be 2-20M ram? With the standard Atari memory cards, I think you
>can have 4Mb of ST-RAM and 16Mb of TT-RAM, totally 20Mb.
>

Actually, it should be 2-26 Mb. You can add a 2 meg, or an 8 meg ST RAM
card.

Okay, it's finally time to sell off all my computer equipment, here we
go:

Item nr 1:

Atari Falcon030/4/65 (4Mb RAM, 65Mb internal IDE-HD)

Hardware(beyond the usual Falcon stuff):
DDD HighSpeed40 accelerator (40MHz CPU,20MHz BUS, 40MHz DSP) -
unfortunately it bugs out quite often using LHA 3.x, ON/OFF switch
at the back of the computer, installed by autorized Atari dealer
Copson Data AB
Apple CD150, external SCSI CDROM-player (1x)
ScreenBlaster video-accelerator (external)
Logitech mouse (the best I've ever tried!)
Barely functioning GeniScan ST, greyscale handscanner
Small freestyle-loudspeakers
Joystick "ErgoStick"
Both Falcon>VGA and Falcon>RGB adapters for monitor-connection

Software included:
Magic 4 (GREAT multitasking OS)
NVDI 4 (SUPERB software-accelerator, also replaces SpeedoGDOS and
supports True Type fonts)
Calamus 1.09n (Swedish version, including the manual)
CoNnect 95 (registered version of the no 1 comm-program)
STOOP (Registered version of this great boot-selector, similar to
SuperBoot only a lot nicer and better)
Da's Vektor (GOOD vector-graphicsprogram)
RainBow II MultiMedia(VERY GOOD Mukltimedia-program)
NeoDesk 3 (replacement desktop)
NeoCLI v2.1 (Command Line Interpretator for NeoDesk)
That's Write 2.09 (Word Processor)
Harlekin 95 (GOOD multi-acc, including calender and text-editor)
HiSoft WERCS (old RSC-editor)
TimeWorks Desktop Publisher ST v1.?
STOS - The Game Creator
SpeedoGDOS (of course)
MultiTOS (of course)
around 50 HD-disks filled with packed PD/ShareWare software
around 30 coverdisks from ST Format/ST Review
18 HD-disks with PD/ShareWare that I got from "AtariSpecialisten"
when I bought the computer
1 diskbox that can take 100 3.5" disks
m.m....

Books included:
Programmering i C (pagina)
Atari ST/STE H&#65533;rdfakta (pagina)
Programmera 68000 (pagina)
Atari ST Application Programming
Atari ST Internals
Logo Programming
Atari ST User's Handbook
Atari ST Logo
And of course the Atari Falcon030 Owner's manual

Price: 4500 SEK (Swedish currency!)

Item nr 2:

Aktra Personal Computer (PC, minitower)

Hardware:
i486 dx 33MHz CPU
8Mb RAM
VESA Local bus
2 serial + 1 parallell + 1 joystick port
170 + 420 Mb IDE-Harddrives
Trident SVGA with 512kb minne (800x600 at 256 colours at most)
15" "MultiScan" SVGA screen, SMILE (VERY GOOD!)
Standard pc-keyboard
Agiler 3-button serial mouse
Canon BJ10ex, black/white bubblejet printer 360x360dpi

Software:
DOS 6 (Swedish)
Windows 3.1 (Swedish)
Plus a mixed bunch of software left on the harddrive...

Price: 5000 SEK

Price too high? Give me an offer quickly and I will consider it!

I live in Sweden (Stockholm) and Swedish buyers are preferred... Reply
either by e-mail to "Thylboy@stacken.ct.se" or call 070 / 657 81 31
(mobile phone + answering machine) or 08 / 774 78 64 (home)...

Greetings from Magnus Thylander...

So what OVL's did you try, and where are they available from? And which did you prefer? I was only aware of CAB.OVL.

I'm going to be away for a couple of weeks, so if you post a reply I'ld be glad of an e-mail copy as I won't be able to read it on the list.

> printing, with and without microweaving.

I have NVDI v4 along with a Epson Stylus colour 200 printer, i have yet
to find NVDI or anything that will print at 720dpi though. I have tried
a few prgs so far, but still nothing happens, the paper is fed through the
printer but that is all, it does work at 360dpi though, if that's any help.

Yes, it does ! I have a simmboard with 4 x 1MB simms on it in my Atari
520 STm. Works great. Only problem is, it didn't fit into the ST and so
I build the computer, drive and supply into an old PC housing.
But of course, you don't have that problem with the Fm. Should be lots
of space free in there.

Lars.

No it doesn't. But that still doesn't take away from being ripped
off.
>Next time, don't send the merchandise before you get the money.
>
You are right, and that is what I will do. But for over 2 years I did
just the opposite, unless the buyer asked for COD, I would ship with
the agreement to send payment after receipt.. And it worked, I
enjoyed the honesty of the community and the buyer enjoyed the piece
of mind.
As far as the offending post, all I am trying to do is locate the
fellow who did not pay and at least get a reply. I lost his name and
e-mail address so am trying to locate him on the newsgroup. I in no
way want to blame all Swedish Atari users. Only relay my story to
everyone else who wants to listen and take my advice.-Dan F.

On Sun, 30 Mar 1997, Destiny wrote:

->Questions:
->
->What Midi software can I use with the 1040STf with just a floppy.
->How can I transfer stuff from my PC to the Atari.

You can use just about any commercial or shareware sequencer program on a 1 meg ST without a hard drive. Cubase, Notator, Dr.T's, Edit Tracks all work fast and fine. You won't be able to do much with ditigal audio, though.

->What I REALLY Need:
->
->1040STf internal Floppy Disk
->WD1772 Chip for 1040STf
->4 Meg Expansion
->TOS update ?? ( don't know if it can use one )

You would be better off getting a STe or a Falcon than doing all that upgrade work.

Dave

Richard,

Where are you located? I have a rather unorthodox Mega 4 you might
be interested in, but it's in a full size tower case and quite heavy.
It has a TOS 1.0/2.06 switcher and two internal floppy drives, as
well as a T-25 board, which unfortunately, only does 8 mhz these
days. Oh yeah, it has a Tweety board (stereo output) and a 4096
color board (for STE pallette) also. You will need a Mega ST, STE
or TT keyboard for it, as well as a cartridge extender (Wizztronics)

SA>
SA>Do you know?

AVSERVER expands the abilities of MagiCDesk (MagXDesk) of MagiC V.4.x. These old MagiCDesks have only limited AV functionality. The AV/VA protocol is useful when using StartMeUp, AppLine, MultiStrip and such tools. Just install it and forget it - other applications will proft.

Just a word of advice/warning to all in the US selling overseas.
Don't do it unless you know and or trust the other party!!
Case in point. Sent 2 ICD SCSI HOST Adapters to a fellow in Sweden as per his request. End result, never got paid! Never heard from him since. Unfortunately, I have been switching ISP's so much over the last 5 months that I lost his e-mail address.(ISP troubles, a story for another day) :^/
Although I can take the loss and blame myself for being 'so trusting', it still hurts being ripped-off. Think twice before selling to a guy in Sweden from the U.S.- BTW - If the fellow who stiffed me for the SCSI adapters wants to make good, just drop me a line, and a check, and I will tell everyone that you had a change of heart. Promise not to mention names. Dan Fangmann

>10 megs of Ram in this bank.

Yes, I know there is two megs of DRAM soldered directly to the motherboard, and
you can use a card to add ST-RAM situated just above this, under the HD, as you
state. My current ST-RAM figure is the 2 megs on the motherboard and a card with
additionally 2 megs. Then you tell me there exists cards with 10Mb of ST-ram.
Great! Do you know where I can obtain one? Does there exists third-party ST-RAM
cards for the TT? If so, who's got them?

>
>The "TT Ram" is configured for 32 bit addressing and requires the use of a

>10 megs of "ST Ram" and 4x64=256 megs of "TT Ram".

Let me get this correct. I have the Atari made 6-jumper TT-RAM card. Can I use
4x64 SIMMs on this card? If so, could you please give me the correct type and
speed to get so that it'll work in Burs-Mode ?

My current 16 megs of TT-RAM is, as far as I know, 4x4Mb 8 non-parity 80Ns SIMMs
And apparently this will not run correctly in Burs-Mode. Can you help?

>The Thirty-two bit addressing coupled with the 32 bit internal processing
>bus rendered the name "TT" for Thirty-two/thirty-two, as opposed to the
>Sixteen/Thirty-two arrangement of the ST.
>

Yes, I know all that, but there's one thing I'm not quite sure of; The
motherboard and ST-RAM is running at 16Mhz, right?. So, the ST-RAM is accessed
over a 16Mhz but. But, is the TT-RAM accessed over a 32Mhz bus??? I would
appreciate a clarification on this, please.

BTW, It's a excellent FAQ you've created. Keep up the good work ;-)

# 6070. NOVA & GDOS

Newsgroup: comp.sys.atari.st
Date: 1997-03-31 00:00:00 UTC
From: dogmeat@fog.net
Message-ID: <5hnib6$jf0$1@news.wco.com>
Source record: 124829

Fellow Atarians!

I recently bought a 2nd hand NOVA graphics card. Knowing that
I would no longer be able to use my copy of NVDI 4 I bought
a used copy of SpeedoGDOS 5.

Well, the graphics card works great. And the installation
of SGDOS went much better than v4. BUT when I try to use the
fonts, they aren't there! (under the NOVA card - otherwise they
work great!)

ATARI Works reports "Cannot find graphics fonts on your system."
With some fooling around my current guess is that the SCREEN.SYS
drivers in ROM aren't good enough for the new VDI.

Is this right? If so, how can I convince the NOVA VDI to accept
GDOS? Or vice-versa?

Please Help!

Hi Brett,

If you have NVDI 4, you most certainly can use it with the Nova Card. Just run the install program while you have Nova up and running, it should automatically disable the NVDI screen driver sys files.

All the best,
Chris @ Computer Direct

Brett.... there is no reason at all why NVDI 4 and the Nova card would be incompatible. I'm running the same setup on my TT. Do you have the proper drivers for the card? (i.e. EMULATOR.PRG, MENU.PRG and STAVDI.PRG). The Nova drivers take over the video display and NVDI recognizes that, still allowing you full Speedo/TrueType fonts for all your applications.

Check your disks, you should have this installed properly and would have no need to use Speedo at all.

Keith

>to convert it.

Yes sorry about that, its never been falcon compat, but work has
started, if you can check the web page out you will find a demo and
lots of info of whats happening,
Limited success at the moment, but hopefully have a working level by
mid to end of week,

My artist has agreed to add new graphics and the guy designing the
levels for BillyBoy has expressed an interest in doing new ones for
HERO, so it all look like a goer

Minimum 2meg STe...then upwards to TT and Falcon etc :)

Cheers !ynoT ( ATARI Programmer )

As much as I hate to do this I am putting my Falcon system up for sale
I habe 2 Macs in my studio now and I am using my Falcon less and less.
This system works great and everything in it works.
It is set up for music but I have lots of software, including DTP
software and others. I do not want to seperate this system, but with
what all comes with it I think it is a good buy. If anyone is interested
and wants to email me please use my email address.
Here goes the list:

Atari Falcon w/14 megs ram, math coprocessor, 84 meg IDE internal drive,
256 color, 520 meg Fujitsu external SCSI drive, 1 gig Seagate external
SCSI drive, 88 meg Syquest w/3 blank cartridges, cartmaster lite
cartridge expander, joystick, extra mice and cable, Magnavox 13" RGB
Multisync monitor, JL Cooper PPS-1 SMPTE Box, JL Cooper MSB+ 8 in 8 out
programmable midi patchbay, Compo digital interface and a SoundPool FDI
digital interface.

Software:

AudioMaster by SoundPool 2 track audio mastering sofware V1.73
Wavemaster by SoundPool 2 track waveform editor V1.11
Dynamite by SoundPool Stand alone compressor program and
Audiomaster plug-in
CD Recorder Pro by SoundPool records both audio and data cd's V2.12
Cubase 2.06 multitrack audio program with midi sequencer w/ Studio
Module, Style Trax
Trax track sheet program
Studio Manager studio invoice program
MSB+ accessory to control MSB+ midi patchbay
Cardfile
Steno
Straight Fax
Geneva
Multitos
Neodesk 4
Codehead Utility Disk
Multidesk Deluxe
Stalker
Diamond Back II
Diamond Edge
Ultimate Virus Killer
Harlekin II
NVDI 4
Blow Up Hard I resolution expander
Atari Works

Imagecopy 4 CD
Gemview
Pallette Master
Pagestream 2.2
Truepaint
Studio Photo
Composcript
Flight of the Intruder
Sim City
GT Look II scanning software for Epson flatbed scanners
DA's Vektor Pro
DA's Picture
4T/FX w/ D2D audio editing software
Kobold
Ease
Multiprint
Musicom hard disk editor
Dr T's KCS midi sequencer
DR T's X-oR editor librarian software
Calamus Sl DTP software latest version w/ lots of modules including
Bridge, Mask, Blend, Toolbox, Color Sep, Line Art,
plus lots more with several CFN fonts
Literally tons of shareware like 525, Thing, Zcontrol, Cab, Ghostscript,
etc.
Probably a few other I haven't remembered.

The Price: $2400 US takes the entire package, plus shipping.
send email to track1@sc.tds.net
or call Barrry Keel @ 803-266-3410

Regards,
Barry

# 6085. Re: New CAB v2.0 Demo available!

>good Modem so he can test his excellent work...

Yep, it's getting better. The biggest weakness is still image
unpacking IMHO - the Webspace demo is 2-4 times faster! I hope
mr. Clauss will put some assembler routines for this into the code,
or get someone else to write them...
Another peculiarity is that Cab2 still loads and shows pictures even
after I've turned imageloading off - happens after browsing through
a few pages.

>You got that trouble offline?

Yep offline. Online I always working with N.AES.
I've changed the bild-memory cache from 4096 to 12288. Also I've tried
CAB 2 with different flag setting (Fastload, load TT-RAM, allocated
TT-RAM). No use. I still get that dreadful runtime 163 error.

>stuff.

Define "dead"... I define dead as absolutely nothing, hardware or software wise is being released for it any longer... Hardware and software (new and public domain/shareware) are still being released for the Atari line. In fact, while the quantity is less, the quality is much, much greater. So if we use that definition, you are wrong. In fact, you could say you are "dead" wrong...! <grin>

Actually, there *is* no Tuesday 29 February 2000, last I knew. Leap years normally happen every four years, but not when the year is evenly divisible by 100.

MAIL SERVERS
------------
Mail servers can be used to get hold of the same software as through FTP,
but instead of using a lot of download time online, files can be 'ordered'
via email.
In order to get information about how to do this, send an email to the
various addresses below with the word: help
in the mail itself. If possible, do not include any 'signature' in the mail,
as the automated system which replies to these mails tries to interpret any
message (and with a certain amount of errors no response to your requests
will be given at all).

Email server email address Equivelant to FTP site

I don't know why they don't work but for best results you should:
Use 8/9 chip simms,
Use chips with the same speed rating (should be >90ns IIRC)

Do only 2 specific chips work or is it any 2 chips?

# 6096. User Group Links Wanted

Newsgroup: comp.sys.atari.st
Date: 1997-03-31 00:00:00 UTC
From: rgoring@REMOVE_TO_REPLYzetnet.co.uk
Message-ID: <5hopvd$4vb@irk.zetnet.co.uk>
Source record: 124855

Hi All,

Next part of the WAG pages is due for update :-)

This time I would like links to Atari User Groups around the world :-)

I am still after other Atari links as well :-)

Please email me -

1. the URL

2. A logo, UUEd in the mail

3. A short paragraph description of your site

If you want to visit the site, please register so that you will be told
when it has been updated :-)

Please also mail me with comment about the site, I am thinking of adding a
guestbook that will display the comments :-) Good or Bad :-)

Yours Roy

# 6098. FS: Atari Mega System

Newsgroup: comp.sys.atari.st
Date: 1997-03-31 00:00:00 UTC
From: phiscock@ee.ryerson.ca
Message-ID: <5hopm1$irv@ns2.ryerson.ca>
Source record: 124857

Fellow Atarians -

I have to make room in my workshop for a new project, so the Atari stuff, still useful to someone I'm sure, has to go. I used the system to run TeX (disks included) and for general word processing.

The last time I sold some Atari stuff, I was told that the stuff was underpriced, and it went very fast! It's all in working condition.

- Atari Mega 4 Computer, with keyboard and mouse, of course.
- Atari SM124 Monochrome Monitor, very crisp display
- Atari SH205 Hard Drive, matches Mega 4
- Atari SLM804 Laser Printer, toner replaced recently
- 80 Meg external hard drive in home-brew case with ICD SCSI adaptor and internal power supply. Plugs into Mega 4 SCSI port directly.
- Cyber Studio CAD3D software
- Cyber Paint sofware
- GFA Basic with compiler
- Manuals and cables for all hardware
- 177 disks of PD and Commercial sofware
- Extra mouse, with flakey button (Omron part, I believe).

I'd like to sell this as a package, total $250, plus packaging and shipping costs if outside Toronto. The last package of Atari hardware cost about $80 to ship from Toronto to Oklahoma.

You can contact me by email or at my home phone, 416-465-3007.

Cheers - Peter

From: Jah Rey <JamesBRey@aol.com>
Message-ID: <33401257.581C@aol.com>
Source record: 124861

FOR SALE:

Canon BJ-10ex PC compatible black and white printer. Also compatible with Atari.

This is a notebook printer with Bubble-Jet style printing. Excellent output for all kinds of uses. I had used it with Atari Notator for printing out music scores.

Many features including different font styles, envelope printing, etc.

Comes with power supply, all manuals, etc.

Very small footprint and excellent printing make this a good choice for anyone that needs portability in a printer.

Low, low hours.

$250.

Email JamesBrey@aol.com.

OK, as I was following your lead in putting in up, I will follow your lead
in removing it as well. Certainyl the last thing we all need is for ASH o
angry with us.

However, if ASH was distributing this freely at the Show, it should be OK
to continue freely distributing it. On the other hand, I notice there are
some probably easily solved bugs that they will want to solve before
distribution get too wide, so I will give them some time to release a new
version of CAB 2.0 demo (hopefully with an English .RSC file)

First off, I am not a 'dealer'. Just a private Atari user who got
into selling stuff on-line as a 'hobby'. I have been using Atari's
since 1985 and like the kindship shared by fellow users.
That said, my dealings with Atari users has always been on a
'trusting' basis. For over 2 years i have shipped stuff and asked for
payment latter, and it worked. This was most rewarding to around
fellow Atari users who were so honest to deal with. A few times I
received comments from people who really enjoyed my policy and related
similar stories about the Atari communitys 'felling of family'.
>I dont't think it's fear to warn companies about Sweds particularly, there
>are thieves all around the world...
I agree and am sorry to all that took it that way. I just felt it was
time to tell my story and hope the offending party would 'make good'
on the deal.

No and NO!! Look, I lost the guys e-mail address and name. My intent
was to get this fellows attention and maybe get a reply as to why he
never paid. Then again I felt obligated to warn all who sell stuff
on-line of the dangers. I know, it was my own fault for being so
trusting and was asking to be 'burned' sooner or later. But it was
enjoyable over the past 2 years dealing with Atari users in such an
open and honest way, asking for payment after they had a chance to
receive the stuff. Some insisted on COD and I shipped COD, but felt,
at the time, that COD was a waste of money.
Anyway, sorry I offended you and your fellow Swedish Atari Users. -Dan

```
l > The Thirty-two bit addressing coupled with the 32 bit internal
l > processing bus rendered the name "TT" for
l > Thirty-two/thirty-two, as opposed to the Sixteen/Thirty-two
l > arrangement of the ST.

Except that the ST RAM on a TT uses a 64 bit bus.
(ST = Sixty-four/Thirty-two ;-).

The 10 Meg limit is so that it won't conflict with the Mega VME bus
area. Since it holds exactly 4 times as much ST RAM as an ST, you
could load 16 Meg, but wouldn't be able to access all of it.

>is a big plus along with other midi software. Will be using for
>sequencing.

All Falcons have at least one floppy, so that should be no problem.
Mouse is pretty much standard (they come with one that's about equal to
a brick <G>). Monitor - what type are you looking for, or do you know?
The Falcon can deal with the SC/SM series ST monitors, and VGA/SVGA
(depending on which monitor block you get).

>Email me for more details and/or questions. Thanks very much. Also, if
>this isn't the correct location for this type of posting, please tell me
>where to post this.

This place is fine - and you'll get feedback (mostly polite) on almost
any posting.
